Please be advised that Jarrow Formulas, Inc. is marketing a product containing a "Structure and Function" statement on the label. According to the notification requirements set forth by the DSHEA (Dietary Supplement Health and Education Act, 1994) legislation, please be advised of the following:

Name of Product: Taurine 1000, 100 capsules

Active Ingredient(s): Taurine

Claim(s): "Antioxidant Amino Acid." As an antioxidant, taurine is used to quench hypochlorite secreted by leukocyte immune cells. Taurine also aids in osmoregulation (maintenance of proper concentrations of ions) inside the cell. Taurine's other biological functions include cellular growth, membrane stabilization, sperm motility, bile acid conjugation and neurotransmission. Taurine may also benefit athletic performance as it acts as an insulin mimetic, thereby allowing for better glucose deposition into muscles.

The following disclaimer appears on the label: These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

These claims are limited to, and a result of, what we believe to be a substantial body of scientific evidence supporting the functional role of these nutrients. A compendium of relative published research substantiating the above statement(s) is on file at the corporate office.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Siddharth S. Shastri".

Siddharth S. Shastri, B.A., C.C.N.
Director of Product Development

LET1946
60147

USAGE: As a dietary supplement, take 1 capsule per day or as directed by your qualified health consultant.

Taurine is a sulfur containing amino acid chemically known as beta-aminoethanesulfonic acid. Taurine is produced by the body from the amino acids methionine and cysteine and is found in most cells. As an antioxidant, taurine is used to quench hypochlorite secreted by leukocyte immune cells. Taurine also aids in osmoregulation (maintenance of proper concentrations of ions) inside the cell. Taurine's other biological functions include cellular growth, membrane stabilization, sperm motility, bile acid conjugation and neurotransmission. Taurine may also benefit athletic performance as it acts as an insulin mimetic, thereby allowing for better glucose deposition into muscles.

This statement has not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.
