42 Day Target Animal Safety Study: In a 42 day study, 8 month-old, intact female or neutered cats, 3.2 to 4.9 kg body weight were used. Small Thymuses were noted in all robenacoxib-treated groups. One 3X cat had a normal thymus in the left ventricular papillary muscle. Increased colloidal damage was noted on histopathology. One 5X cat had a minimal ulcer on the tongue, and 10 cat had minimal ulceration of the left ventricular papillary muscles.

Effectiveness: Effectiveness was demonstrated using ONSIOR tablets in a masked, placebo-controlled, multi-site involving client-owned cats. In this study, 242 cats presenting for osteoarthritis or osteoarthritis combined with ankylosing spondylitis (both) were randomly assigned to either robenacoxib administered ONSIOR tablets, or a placebo. Drug was administered approximately 30 minutes prior to surgery along with pre-anesthetic medications and continued once daily for two additional treatments. Effectiveness was evaluated in 244 cats and field safety was evaluated in 249 cats. A significant difference in pain was demonstrated in the field study. The study demonstrated that when robenacoxib was administered as ONSIOR tablets, there was a significantly lower rate of treatment success in the placebo group compared to the robenacoxib group. This difference was statistically significant at 60, 90, and 180 days post-surgery. The study results indicate that ONSIOR tablets provide effective and safe treatment for the control of osteoarthritis and ankylosing spondylitis in cats.

Information for Cat Owners —

What kind of results can I expect when my cat takes ONSIOR tablets for pain/osteoarthritis? ONSIOR tablets may help your cat to recover more comfortably by reducing pain and inflammation associated with osteoarthritis and ankylosing spondylitis in cats.

To use ONSIOR tablets:

• Take ONSIOR tablets as directed by your veterinarian. Do not give ONSIOR tablets or other NSAIDs to your cat if you have any information that your cat is allergic to aspirin, ibuprofen or other non-steroidal anti-inflammatory drugs (NSAIDs).

• Do not give ONSIOR tablets or other NSAIDs to cats less than 4 months of age or cats with a history of aspirin allergy.

• Give ONSIOR tablets to cats as an anti-inflammatory and analgesic (pain reliever).

• Do not use ONSIOR tablets for cats less than 5.5 lbs.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.

• Give ONSIOR tablets to your cat after your veterinarian has diagnosed your cat with osteoarthritis or ankylosing spondylitis.
