To administer OroCAM® (meloxicam) Transmucosal Oral Spray, the corner of your dog’s mouth should be lifted away from the teeth, opening the cheek space. Place the tip of the applicator just inside the cheek space, directed towards the back of the cheek space. Holding the bottle and pump upright, fully depress the spray head taking special care to ensure no spray escapes from the mouth. Allow the pump to fully release before administering (contact sprays if necessary). Immediately after administration of the spray use a moist paper towel or tissue to clean the tip of the pump. Wash hands after administration of the product.

When do I need a new bottle? The shelf life of the container should be covered by the fluid. Once fluid falls below the level of the liquid, spray will not be effective and the bottle should be replaced. There is no specific volume of fluid at the bottom of the bottle which cannot be used. Each shelf life (and expiration) lasts for 6 months after it is first assembled by your veterinarian. What can I do if pump failure occurs? In case of pump failure, wipe nozzle and then replace the bottle, do not re-administer that spray. If the pump clog occurs during your dog’s dose, do not re-administer that spray. Do not re-use pump if pump failure occurs, wait until the next dosing time to administer OroCAM.

What are the possible side effects of OroCAM that may occur in my dog during OroCAM therapy? OroCAM, like other NSAIDs, may cause some side effects. Serious adverse effects associated with NSAID therapy in dogs can occur with or without warning, and in rare situations, result in death. The most common adverse effects associated with OroCAM therapy involve the digestive tract (vomiting and decreased food consumption). Liver and kidney problems have also been reported with NSAIDs. Loss for the following side effects that may indicate your dog has a problem with OroCAM:

- Change in weight
- Change in behavior (such as depression, anorexia, or anxiety)
- Change in skin (redness, scabs, or itching)
- Change in eyes (blepharospasm, photophobia, or erythema)
- Change in intake (frequency, or amount consumed)
- Change in output (frequency, or amount)
- Weight loss or gain
- Shortness of breath
- Changes in heart rate
- Changes in blood pressure
- Swelling in extremities
- Changes in neurologic function
- Changes in CNS activity
- Changes in liver enzymes
- Changes in kidney function
- Changes in blood sugars
- Changes in hematocrit
- Changes in platelet count
- Changes in blood cell counts

Tell your veterinarian about any medications your dog ingests. It is important to stop the medication and contact your veterinarian immediately if you think your dog has a medical problem or side effect while taking OroCAM. If you have additional questions about possible side effects, talk with your veterinarian or call (888) 299-7416.

Can OroCAM be given with other medications? OroCAM should not be given with other NSAIDs, aspirin, ibuprofen, naproxen, etodolac, deracoxib, tepoxalin, or other COX-2 or NSAIDs (for example, aspirin, carprofen, meloxicam). OroCAM should not be given with other corticosteroids (for example, prednisone, cortisone, dexamethasone, or triamcinolone). You should not give OroCAM to cats.

Should I give OroCAM to my dog in addition to other medications? Yes, if your dog is responding as expected and if your veterinarian determines that additional medicines are needed. It is important to periodically discuss your dog's response to OroCAM with your veterinarian. Your veterinarian may determine that additional medicines are not needed if your dog is responding as expected and if your veterinarian determines that additional medicines are not needed. It is important to periodically discuss your dog's response to OroCAM with your veterinarian. Your veterinarian will determine if your dog is responding as expected and if additional medicines are needed.

Do not redose if pump failure occurs; wait until the bottle which cannot be used. Each bottle is a residual volume of fluid at the bottom of the center tube, sprays will not be adequate and the bottle should be replaced. There is no specific volume of fluid at the bottom of the bottle which cannot be used. Each shelf life (and expiration) lasts for 6 months after it is first assembled by your veterinarian.

What else should I know about OroCAM? Oral Spray? Consult your veterinarian immediately if your dog is responding as expected and if your veterinarian determines that additional medicines are needed. It is important to periodically discuss your dog’s response to OroCAM with your veterinarian. Your veterinarian will determine if your dog is responding as expected and if additional medicines are needed.

Tell your veterinarian about all medications your dog ingests. It is important to stop the medication and contact your veterinarian immediately if you think your dog has a medical problem or side effect while taking OroCAM. If you have additional questions about possible side effects, talk with your veterinarian or call (888) 299-7416.
