Subject: One physician registers over 100 cases of Aspartame Disease in his clinic

Usually physicians have a lot more cases of aspartame disease as one clinic physician said 80% of their walk-in patients are there because of this neurotoxic drug. But just think if every physician in this country alone has just 100 cases how much of the population is suffering from this global plague. And all this while the FDA continues to lie to the public, physicians and medical personnel with regards to safety exponentiating the epidemic. Plus not recording the cases!

FDA: Look at the plague you have visited on humanity! Have you no conscience? And because you have no warning for pregnant women and aspartame is an abortifacient and teratogen consider how many millions of babies are murdered in their mother's womb.

>Dear editor,
> The report on aspartame confirm the whole story of chronic problems
> occurring with a great amount of users of this food additive.
> In our clinic we registered over one hundred cases of serious
> problems, including convulsive fits, migraine, insomnia, loss of weight ,
> weight gain, loss of vision.
> The findings confirm entirely the clinical observations of
> H.J.Roberts, MD, author of the book Aspartame, is it safe?
> Best regards,
> Arnoldo Ve -----,MD
