FINALLY I got the specific info we've been waiting for from Dr Wagner at Genentech.  
Their NCGS registry has a record of 66 girls with Turner syndrome treated with Nutropin Depot. A few more have probably been treated but not submitted to the registry. [redacted] is only case of diabetes reported.  
She told me today they submitted the Medwatch report as I requested last month with the causal association changed from "probably not related" to "possibly related."

>> [redacted] 03/31/03 11:14AM >>>

Dear [redacted] DR [redacted]  
My contact at CDER asked me to ask you if you could initiate a copy of the adverse event of Lauren's onset with diabetes to MedWatch. This will insure that it has been reported to them indicating your designation from "unlikely" to "possibly". Can you do this at your earliest convenience? Thank you.  
[redacted] 7
