V8 CHECK 2 P 1

I received my shot in the spring of 2000. I specifically asked my doctor were there any side of effects, and he forcefully stated no. That very afternoon when I returned to work after I spent my lunch hour in the doctor's office my left arm began to pain like no tomorrow. It felt as if someone had driven a nail right through my arm. I could not type on my computer as the sharp throbbing pain shot thru my arm. I went home that night and the pain was so intense I could not eat dinner or sleep. My husband called my doctor's emergency service to describe the awful pain that I was experiencing and the doctor simply reply oh yeah that is one of the side effect linked to this vaccination. My arm continued to hurt for a week. Since that time I have had severe migraine headaches that are so intense I feel like vomiting at least twice a week. The hair around the edges of my head have thinned and I am having a difficult time sleeping. My knee caps continue to ache and it is extremely difficult to do any excise. My husband plays with our dog and I helplessly sit in the car and watch from a far. If I had only knew that this vaccine would have screwed up my lift the way it has I would have never taken that damn shot believe me. If my doctor would have just informed me with the side effect I would have weighted the risk and said hell no my life and my quality of life is not worth this. I only had one shot, one shot !!! In my mind I go over and over again if I had only knew the odds of what this vaccine could do to me not only would I never have taken it I would make it my life's work to see that no one else takes this vaccine ever again. I would tell the food and drug admission they have made a mistake to please pull this off the market. In the language of the youth "This vaccine is bad it will mess you up." Please don't let this continue, people are suffering needlessly, stop it, stop it now please.

Sincerely,
