hhs - fda vaccines committee

re meeting of 9/22/05

i cannot attend this meeting but have comments for the record.

when this committee recommends any vaccine be mandatorily given to children or to pregnant women, it should take the time to recognize what all the other vaccines mandatorily given are doing to those children. it should also take all thimeresol out of any vaccine to any child or adult.

i see no reason for using mercury to be injected mandatorily or at all into any human being.
