

**ERRATA
to the
FDA Briefing Package**

**Anesthetic and Life Support Drugs Advisory Committee
March 11, 2008
Sugammadex sodium injection**

Page 4, bullets at the top of the page:

“• The routine reversal of shallow (Studies 301, 310; dose: 2 mg/mL) or profound (Study 302; dose 4 mg/mL) neuromuscular blockade induced by rocuronium or vecuronium.

• The immediate reversal of neuromuscular blockade at 3 minutes after administration of rocuronium (Study 303; 16 mg/mL)”

Corrected to read:

“• The routine reversal of shallow (Studies 301, 310; dose: 2 mg/kg) or profound (Study 302; dose 4 mg/kg) neuromuscular blockade induced by rocuronium or vecuronium.

• The immediate reversal of neuromuscular blockade at 3 minutes after administration of rocuronium (Study 303; 16 mg/kg).”

Appendix, page 3, paragraph under Patient Exposure in the Results section, Sentence 3:

“A total of 115 patients were randomized of which 189 were treated and 108 completed.”

Corrected to read:

“A total of 115 patients were randomized of which 110 were treated and 108 completed.”
