Re: Egg Safety Action Plan

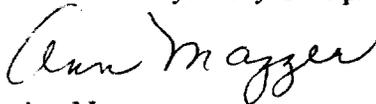

September 24, 2000

Dear Ms. Henney:

Please act quickly to implement your Egg Safety Action Plan. As a user of many eggs for most of my seventy four years, I am very concerned with the widespread contamination of eggs with Salmonella. I have been fortunate to have been raised where eggs were plentiful and chickens not subject to the dangerous practice of allowing the "bottom line" dictate the policy of how eggs are produced.

My concern is not only for me, but for the future of my children and grandchildren, and the many thousands of people who are not aware of what has been happening to one of the best foods on the market.

Thank you for your help.
