Dear Dr. Henney,

I am very concerned with the emergence of antibiotic resistant bacteria which is brought on in part by use of antibiotics in the livestock industry. I feel that in the future this will be one of the greatest threats to American's health. The time to address this problem is now before it becomes epidemic and many lives are lost. I urge the FDA to follow the European Union's lead by banning all growth promoting uses of antibiotics used in human medicine in the United States. Thank you for considering my opinions.
