SUBJECT: Use of Hormones in Dairy and Meat Products

[Message]

I would like to know if anything is going to be done about the use of hormones (such as Bovine Growth Hormones) in dairy and meat products? It is obvious that the FDA is biased in it's approval of such hormones. It does not take a scientist to figure out that health problems (such as breast cancer) are increasing at a fast rate. Any doctor that I have talked to agreed that hormones in milk products are not safe. I would like to see your administration take a more serious look at this problem and not depend only on the FDA Thank you
