Dear Sir;

I am writing to you in regards to the safety of drinking milk with the hormone rBGH which is created and sold by the company Monsanto. I as a citizen and a mother am writing to you on the behalf of my family. We demand that the FDA re- investigate the safety review of rBGH. Please have the FDA cease allowing the usage of rBGH and demand an independent investigation of it, and obtain an independent analysis of the data. Or simply obtain an independent analysis from Monsantos data derived from their studies.

I am a very concerned citizen, and believe that injecting any growth hormone, and especially rBGH into the milk that I and my family drink is not free of any health risks. Thank you for your attention to this matter.

Sincerely,

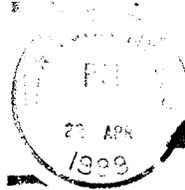

Isabel N. Ebrahimi
