

Dear Dr. Henney,

As a supporter of abortion rights, I want to thank you for actively seeking to ensure that Mifepristone (formerly RU 486) becomes widely available to women in the United States in the early months of 2000. An estimated 1 in 2 adult women in the U.S. will have an abortion, thereby exercising a basic human right to control their bodies. The introduction of Mifepristone to the U.S. market provides women with a valuable, safe alternative to surgical abortion. Please continue to support research which promotes the expansion of women's choices in the field of reproductive health.

Sincerely,

*Julia S. W. Stahl*
