RE: Bovine Growth Hormone (BGH)

Dear FDA Staff,

1136 '00 APR 26 P2:43

As a family of milk drinkers, we are concerned about the long term and unknown health effects of BGH on humans. We know that hormone has caused a great increase in health problems among dairy cattle which does not bode well for human consumption.

We therefore ask that you ban the use of this hormone until the long term effects have been scientifically ^{studied} and are found to be safe. Your decision on this matter effects the health and well being of many American families.

We would appreciate a response from you regarding this important issue. Thank you.

Respectfully yours,

Melanie Weintraub
