Please continue to keep the label on Olestra products. I believe these labels should be larger and bolder. They should also be more prominent and explicit in their wording. I understand there is some thought being given to eliminating the labels altogether. This would be a huge mistake. I'm extremely sensitive to this chemical, and I understand that 1000's of other people are also. Please do not put us through such agony by allowing us to eat products that have Olestra in them, but we are unaware of it because there is no label.
