Re. Docket No. 98P-0151/CP

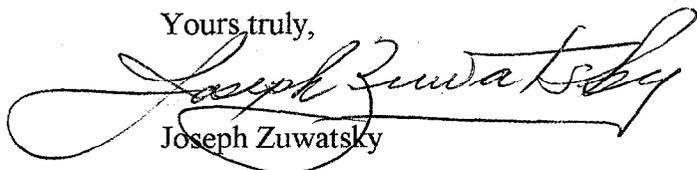

Dockets Management Branch, Food & Drug Administration:

The meat industry in a vile, contemptible, barbarically cruel and inordinately subsidized atrocity. It is most obvious that these people consider only their profit margin worthy of any consideration.

In view of the very valid concerns over mad cow disease and other possible health threats it is reprehensible to continue allowing the sale of meat from "downers." (Downers are cattle that due to illness, disease or broken bones are unable to walk to their slaughter.)

Therefore, I demand that the Food and Drug Administration follow the United States Department of Agriculture's landmark policy decision and prohibit the sale of meat from obtained from downers.

Yours truly,

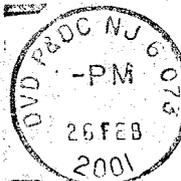

Joseph Zuwatsky
