Re: Docket 00P-1199; Supplement to Citizen Petition Concerning Bioequivalence Determinations for Extended-Release Drug Products

Dear Sir or Madam:

On behalf of our client, Biovail Corporation, we are hereby submitting additional information to supplement Citizen Petition 00P-1199 (submitted March 16, 2000).¹ In the original Petition, Biovail questioned the validity of the practice of the Office of Generic Drugs to grant bioequivalence waivers for lower dosage strength formulations of a certain category of extended-release drug products: Those formulations that depend upon a blend of a limited number of bead types with different dissolution characteristics to achieve the desired extended-release profile. The Petition requested that the Commissioner refrain from granting approval to Abbreviated New Drug Applications (ANDAs) for extended-release generic drugs consisting of a blend of a small number of different types of beads containing active ingredients with intentionally different release characteristics unless bioequivalence has been demonstrated for both the highest and lowest dose form of the product, or until alternate methods are available to assure that a demonstration of bioequivalence at one dose will assure bioequivalence at all other doses. The Petition also urged FDA to reevaluate previously issued approvals and, as necessary, request additional data to ensure that all generic doses are bioequivalent to the corresponding dose for the reference listed drug (RLD). The enclosed data demonstrate that a currently marketed product of the type described by the Petition is not bioequivalent.

¹ On September 5, 2000, FDA responded that "[b]ecause of the complexity of the issues raised in the petition, work on the petition is still in progress." Biovail has received no further word from FDA since this time.

00P-1199

Sup1

As noted in Biovail's original petition, the concern with regard to lower dosage strengths is related to difficulties involved in establishing blend uniformity. In August 1999, FDA released a draft document and sought comment with respect to "Guidance for Industry - ANDAs: Blend Uniformity Analysis" ("BUA Guidance"). Biovail pointed out some shortcomings of that guidance with regard to the extended release drugs that were the subject of the petition, including the inadequacy of using an analytical method that simply checked the blend for the amount of active ingredient present. All of the beads in a formulation consisting of a blend of beads with intentionally different dissolution rates contain active ingredient. An effective BUA for such a product would need to characterize the relative proportion of each bead type for a sample size corresponding to the lowest dosage strength. Absent such analytical evidence of uniformity at the lower dosage strengths, there can be no assurance that the lower strength dosage forms will behave similarly to the highest strength dosage forms that were actually studied for bioequivalence unless the bioequivalence of the lower strength dosage forms is directly tested.

Biovail neither has access to bulk quantities of raw batches of blended bead populations used in competitive drug products nor to manufacturing specifications for such products, so it is not possible for Biovail to directly determine whether the manufacture of such products is supported by adequate blend uniformity data. Like the hypertensive patients that depend upon extended-release diltiazem drug products, however, Biovail does have access to commercially marketed products containing diltiazem in which the extended-release properties are the result of blending beads with intentionally different dissolution specifications.

Biovail has sponsored, and is hereby submitting, clear evidence that a commercially available product of the type described by the Petition is not, in fact bioequivalent to the RLD. Cartia XT^{TM2} (Andrx Pharmaceuticals) is represented to be bioequivalent to Cardizem® CD (the RLD) (Biovail Corporation³). Enclosed are the first 398 pages of Volume 1 (Summary, Report, and Tables and Figures) of a study entitled "Two-Way Cross-over Single-Dose Open-Label Fasting Pharmacokinetic Study of Cartia XTTM 300 mg Capsules Versus Cardizem® CD 300 mg

² The two bead character of Cartia XTTM is amply documented by Andrx's own public filings with FDA. See Docket 98P-0145 (Andrx contending that any generic versions of Cardizem® CD be required to demonstrate the "two peak" profile of the RLD, even if other bioequivalence criteria are satisfied).

³ Cardizem® CD was originally developed and shepherded through the FDA approval process by corporate predecessors to Aventis. As of January 2001, Biovail purchased the entire Cardizem franchise from Aventis and thus steps into its shoes with respect Cardizem® CD.

Capsules, in Normal Healthy Non-Smoking Male Subjects.”⁴ The study compares the 300 mg⁵ strengths of Cardizem® CD and Cartia XT™ diltiazem hydrochloride extended-release capsules. The Cartia XT™ product was found to fall outside FDA’s criteria for bioequivalence with regard to C_{max} (80 – 125%); for Cartia XT™, the 90% geometric confidence interval for C_{max} was 73.84%-89.37%. Patients titrated for blood pressure maintenance with the lower C_{max} of the Cartia XT™ product would be at risk of dangerously low blood pressure if their next prescription refill were with the RLD or a generic that was bioequivalent to the RLD.

The enclosed study report confirms that the concerns expressed in the original Petition are far from idle speculation, but represent a serious risk to public health. FDA must act to correct this situation immediately.

Respectfully submitted,

John B. Dubeck

Enclosures

⁴ Study # 2443 (B01-527PK-FILG12). The full study report (5 volumes) is being submitted under separate cover to the Office of Generic Drugs for its consideration.

⁵ This is the highest approved dosage strength for Cartia XT™ and it presumably was the subject of bioequivalence testing prior to approval. The fact that the commercial distribution of the highest dosage strength is not bioequivalent underscores the BUA issues raised in the original petition and the alternative relief sought that FDA withhold approvals “until alternate methods are available to assure that a demonstration of bioequivalence at one dose will assure bioequivalence at all other doses.” It would appear that in the absence of an effective BUA protocol specific to these types of dosage formulations there may be a lack of assurance that even a single dosage strength will continue to be bioequivalent from one batch to the next.

FORMULATIONS TESTED:

Treatment A: Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsules
Lot #: 600A073 ; Expiry Date: 07/02
(Andrx Pharmaceuticals, Inc.)

Treatment B: Cardizem® CD (diltiazem HCl) 300 mg Capsules
Lot #: 1030455; Expiry Date: 11/2002
(Aventis Pharmaceuticals, Inc.)

EXECUTIVE SUMMARY

This randomized, open-label, single-dose, two-way, crossover study was designed to evaluate the pharmacokinetics of the test product, Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsules (Andrx Pharmaceuticals, Inc.), versus the reference product, Cardizem® CD (diltiazem HCl) 300 mg Capsules (Aventis Pharmaceuticals, Inc.) under fasting conditions. The two study periods were separated by a one-week washout period. Twenty-three (23) blood samples were drawn for drug content analysis at 0.0 (pre-drug), 1.0, 2.0, 3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0, 11.0, 12.0, 13.0, 14.0, 15.0, 16.0, 18.0, 24.0, 30.0, 36.0, 42.0 and 48.0 hours post-drug administration during each study period. Upon completion of the clinical portion of the study, all plasma samples were delivered to the analytical facility for the determination of diltiazem, desacetyldiltiazem and N-desmethyl diltiazem concentrations. Twenty-eight (28) qualified subjects were entered into the study. Pharmacokinetic and statistical analyses were conducted on twenty-seven (27) evaluable subjects that completed the study. Eleven (11) subjects experienced a total of nineteen (19) adverse events during the study, consisting of headaches, nausea, loose stool, dizziness, vomiting, decreased glucose, elevated protein in urine, decreased neutrophil count, decreased WBC count, decreased calcium, leukocytes in urine, elevated glucose and elevated ALT. There were no protocol deviations and twenty-seven (27) blood sampling time deviations reported during the study.

The 90% geometric confidence intervals for diltiazem AUC_{0-t} , AUC_{0-inf} and C_{max} were 82.23 – 95.01%, 82.89 – 95.36% and 73.84 – 89.37%, respectively, with point estimates of 88.39%, 88.90% and 81.23% respectively. The test product therefore failed to demonstrate bioequivalence to the reference product. Metabolite data are provided as additional information.

REPORT

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

**A TWO-WAY CROSS-OVER SINGLE-DOSE OPEN-LABEL FASTING
PHARMACOKINETIC STUDY OF CARTIA XT™ 300 mg CAPSULES VERSUS
CARDIZEM® CD 300 mg CAPSULES, IN NORMAL HEALTHY NON-SMOKING
MALE SUBJECTS**

OBJECTIVE

This study was designed to evaluate the pharmacokinetics of the test product, Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsules (Andrx Pharmaceuticals, Inc.), versus the reference product, Cardizem® CD (diltiazem HCl) 300 mg Capsules (Aventis Pharmaceuticals, Inc.) under fasting conditions.

FACILITIES

The study was conducted from April 13, 2001 to April 23, 2001 at the bioavailability center of Biovail Contract Research (BCR), a division of Biovail Corporation, Toronto, Ontario, Canada. All blood chemistry, hepatitis B-surface antigen, hepatitis C, HIV, hematology and urinalysis testing were carried out by Gamma-Dynacare Medical Laboratories, Brampton, Ontario, Canada. The urine drugs of abuse and nicotine screen(s), saliva alcohol testing, analytical determination of diltiazem, desacetyldiltiazem and N-desmethyldiltiazem in the plasma samples, pharmacokinetic analyses, statistical analyses, and preparation of the final report were performed by Biovail Contract Research, a division of Biovail Corporation, Toronto, Ontario, Canada.

PROTOCOL AND INFORMED CONSENT

The study followed a randomized, open-label, single-dose, two-way, crossover design in twenty-eight (28) normal, healthy, non-smoking male subjects under fasting conditions.

The study Protocol No. 2443 (B01-527PK-DILG12) Version 1.1, and examples of the Informed Consent Form and the Informed Consent to Medical Screening form are presented in the Protocol and IRB section of this report. The Protocol and Informed Consent Form were originally reviewed and approved by the Institutional Review Board of Biovail Contract Research on March 21, 2001.

All subjects signed both the Informed Consent to Medical Screening form and the Informed Consent Form before any procedures were performed at medical screening and during the study, respectively.

STUDY DRUG INFORMATION

The Cartia XTTM (diltiazem HCl extended release capsules, USP) 300 mg Capsules (Andrx Pharmaceuticals, Inc.; Lot Number: 600A073; Expiry Date: 07/02; an oblong capsule, with "300 mg" printed in black ink on the orange cap and Andrx 600 printed in black ink on the orange body) (Treatment A) and Cardizem[®] CD (diltiazem HCl) 300 mg Capsules (Aventis Pharmaceuticals, Inc.; Lot Number: 1030455; Expiry Date: 11/2002; an oblong capsule with "cardizem CD 300 mg" printed in light grey ink on the grey body and with no markings on the blue cap) (Treatment B) were both received by the clinic facility on April 12, 2001. The details of the drug products received are outlined in the Drug Accountability Records section of this report.

The analytical facility was blinded to the randomization code. This code was broken for statistical and reporting purposes after the completion of the analytical portion.

PROCEDURES

Pre-Study Activities

All normal, healthy, non-smoking, male subjects were specifically questioned by BCR's professional staff on all restrictions outlined in the inclusion/exclusion criteria presented in sections 6.2.1 and 6.2.2 of the Protocol. Subjects were informed that concomitant medication was not permitted during the study. Subjects were requested to abstain from alcohol, grapefruit products, xanthine and caffeine containing foods and fluids for 48 hours prior to the start of each study period until the final blood draw for each period.

Subjects were a minimum of 18 years of age (inclusive), and with a body weight not more than $\pm 15\%$ of the ideal weight for the subject's height and frame, as determined by the Table of Desirable Weights for Men in the Protocol and IRB section. The demographic data for the twenty-eight (28) subjects who were dosed is presented in the Demographics Table.

Subjects had the following tests performed at Medical Screening: clinical chemistry, hematology, urinalysis, hepatitis B-surface antigen, hepatitis C, HIV screens, urine drugs of abuse, urine nicotine, saliva alcohol, ECG measurements, vital sign measurements, pre-study physical examination, and pre-study medical and medication history.

Study Activities

The subjects were institutionalized in the clinic on April 13, 2001, the evening prior to dosing and stayed until the 48.0-hour post-dosing blood draw of each study period. There was a one (1) week washout period between study periods.

Upon check-in of each study period, additional urine drugs of abuse and saliva alcohol tests were performed on all of the subjects.

Each subject received a total dose of 300 mg of diltiazem hydrochloride during each 48.0-hour study period as one (1) Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsule (Treatment A), or as one (1) Cardizem® CD (diltiazem HCl) 300 mg Capsule (Treatment B), at 0.0 hour with 240 mL of ambient temperature water. The medication was administered orally starting at 7:00 am (0.0 hour), with two (2) minute intervals between subjects, on April 14, 2001 for Period I and on April 21, 2001 for Period II. A check of each subject's mouth was made to ensure drug ingestion. Each formulation was administered according to the computer-generated randomization sequence, which is outlined in the Dosage Regimen Table. The actual time for each dosing was recorded and is tabulated in the Clinic Records (Drug Administration Records) section.

All subjects remained seated in an upright position for the first four (4) hours following drug administration and were allowed to rise under supervision only for brief periods of time to comply with study related activities or to use the washroom facilities. Throughout each study period, the subjects were monitored by BCR's professional staff for safety. The Principal Investigator, or medical designate, was on-site at least sixty (60) minutes prior to each dosing and for the first twelve (12) hours following each drug administration. The Principal Investigator, or medical designate, were also available by pager throughout the study.

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

Water was provided *ad libitum* until 1.0 hour pre-dose and after 1.0 hour post-drug. The only fluid intake that was allowed during this two-hour time span was 240 mL of ambient temperature water.

The subjects fasted overnight for at least ten (10) hours prior to drug administration. Meals were provided to the subjects at 4.5, 9.5, 23.5, 28.5 and 33.5 hours post-drug. In addition, a snack was provided to each subject at 13.5 and 37.5 hours post-drug. The meals and snacks, which are detailed in the Clinic Records (Menu) section, were free of xanthine, caffeine and grapefruit products and were identical between study periods.

During each study period, twenty-three (23) blood samples (7 mL each) were collected from each subject by direct venipuncture from an antecubital vein using pre-cooled, pre-labelled blood collection tubes containing potassium EDTA as the anticoagulant. Blood samples were collected at 0.0, 1.0, 2.0, 3.0, 4.0, 5.0, 6.0, 7.0, 8.0, 9.0, 10.0, 11.0, 12.0, 13.0, 14.0, 15.0, 16.0, 18.0, 24.0, 30.0, 36.0, 42.0 and 48.0 hours post-drug administration. Approximately 349 mL of blood was collected over the two study periods, including the amount for screening and post-study clinical blood tests. The clock times of all blood draws for plasma concentration analyses were recorded and are presented in the Clinic Records (Blood Sample Collection Records) section.

The blood samples were stored on ice prior to centrifugation and were centrifuged as soon as possible under refrigerated conditions at 3500 rpm for seven (7) minutes. The collected plasma from each blood collection tubes was aliquotted into labelled, duplicate, polypropylene culture and stored frozen at minus (-) 70°C ± 10°C until assayed. To ensure that the analytical facility was blinded to the randomization code, the tubes were labelled with the study number, dosing period, subject number, sampling time point, aliquot number and matrix without revealing the treatment regimen. Upon completion of the study, all

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

samples were delivered to the analytical laboratory for the analysis of diltiazem, desacetyldiltiazem and N-desmethyldiltiazem in the plasma samples.

Vital signs (blood pressure and heart rate) were monitored at the following time points relative to drug administration during each study period: 0.0 (pre-dose), 2.0, 4.0, 8.0 and 12.0 hours post-dose. Vital signs were repeated as required by the protocol.

The 12-lead ECG monitoring was also carried out at the following time points relative to drug administration: 0.0 (pre-dose), 2.0, 4.0, 8.0 and 12.0 hours post-dose. All subjects that were dosed had a PR/PQ interval of equal to or less than 210 msec. ECG results that were outside of the specified range were reviewed by the Principal Investigator (or designate). Following this review, subjects were only allowed to continue the study based on the discretion of the Principal Investigator (or designate).

Subject #02 withdrew during the washout period of Period I due to personal reasons. Following post-study physical examination, vital sign measurements and laboratory tests, as outlined in the Protocol, twenty-seven (27) subjects were able to complete the study under the direction of P. Y. Tam, M.D., F.R.C.P., F.A.C.P. (Principal Investigator), Dr. G. R. Nagai, M.D. (Medical Associate), Dr. E. Pavone, M.D. (Medical Associate), Dr. S. Fung, M.D. (Medical Associate), Dr. G. Logsetty, M.D. and Dr. B. Lau, M.D. (Medical Associate). The analytical determination, pharmacokinetic analyses and statistical analyses of plasma diltiazem, desacetyldiltiazem and N-desmethyldiltiazem data were conducted on twenty-seven (27) evaluable subjects that completed the study.

ADVERSE EVENTS

During this study, eleven (11) subjects experienced a total of nineteen (19) adverse events.

During Period I, seven (7) subjects experienced a total of ten (10) adverse events. These adverse events consisted of four (4) episodes of headache, two (2) episodes of nausea and one (1) episode each of loose stool, dizziness and vomiting. During the washout of Period I Subject #02 experienced one (1) episode of decreased glucose. The adverse events were all mild in severity at onset, with the exception of one (1) moderate episode of dizziness. All adverse events were resolved spontaneously. All of these subjects were able to complete the study period.

During Period II, six (6) subjects experienced a total of nine (9) adverse events. These adverse events consisted of one (1) episode each of headache, elevated protein in urine, decreased neutrophil count, decreased WBC count, decreased calcium, leukocytes in urine, elevated glucose, elevated ALT and dizziness. The adverse events were all mild in severity at onset. All adverse events were resolved spontaneously. All of these subjects were able to complete the study period.

The Adverse Event Records are presented in the Clinic Records section and are summarized in the Adverse Events table.

Other study details are located in the protocol (Protocol and IRB section).

PROTOCOL DEVIATIONS

There were no protocol deviations reported in this study and twenty-seven (27) blood sampling time deviations were reported in this study.

A total of sixteen (16) blood sampling time deviations were reported during Period I. The blood sampling time deviations occurred from 2.0 hours to 48.0 hours post-drug and ranged from one (1) minute to four (4) minutes in length. One (1) deviation resulted from an inconclusive sampling time.

A total of eleven (11) blood sampling time deviations were reported during Period II. The blood sampling time deviations occurred from 1.0 hour to 48.0 hours post-drug and ranged from one (1) minute to two (2) minutes in length.

The above mentioned sampling time deviations did not impact on the calculation of pharmacokinetic parameters, since all calculations were carried out using actual sampling time-points.

The Protocol Deviations record for each period is presented in the Clinic Records section and is summarized in the Protocol Deviations table and the Blood Sampling Time Deviations table.

***REGIMEN**

- A: One (1) Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsule (Andrx Pharmaceuticals, Inc.; Lot #: 600A073 ; Expiry Date: 07/02) with 240 mL of ambient temperature water, following an overnight fast of at least ten (10) hours (Total dose = 300 mg).
- B: One (1) Cardizem® CD (diltiazem HCl) 300 mg Capsule (Aventis Pharmaceuticals, Inc.; Lot #: 1030455; Expiry Date: 11/2002) with 240 mL of ambient temperature water, following an overnight fast of at least ten (10) hours (Total dose = 300 mg).

****SEVERITY**

- MILD: Awareness of symptom but does not interfere with routine activities.
MODERATE: Discomfort enough to interfere with routine activities.
SEVERE: Impossible to perform routine activities.

*****RELATIONSHIP TO STUDY DRUG**

- CERTAIN: A clinical event, including laboratory test abnormality, occurring in a plausible time relationship to drug administration, and which cannot be explained by concurrent disease or other drug or chemicals. The response to withdrawal of the drug (re-challenge) should be clinically plausible. Re-challenge information is required to fulfill this criterion.
- PROBABLY: A clinical event, including laboratory test abnormality, with a reasonable time sequence to drug administration, unlikely to be attributed to concurrent disease or other drugs or chemicals, and which follows a clinically reasonable response on withdrawal (re-challenge). Re-challenge information is not required to fulfill this criterion.
- POSSIBLY: A clinical event, including laboratory test abnormality, with a reasonable time sequence to drug administration, but which could also be explained by concurrent disease or other drugs or chemicals. Information on drug withdrawal may be lacking or unclear.
- UNLIKELY: A clinical event, including laboratory test abnormality, with a temporal relationship to drug administration which makes a causal relationship improbable, and which other drugs, chemicals or underlying disease provide plausible explanation.
- UNRELATED: This category is applicable to the Adverse Events which are judged to be clearly and incontrovertibly due to extraneous causes (diseases, environment, etc.) and do not meet the criteria for drug relationship listed under the above mentioned conditions.

PHARMACOKINETIC AND STATISTICAL ANALYSES

The plasma concentration data for diltiazem, desacetyldiltiazem and N-desmethyldiltiazem were transferred by diskette from the analytical facility to the Pharmacokinetics and Statistics department at Biovail Contract Research, a division of Biovail Corporation. A minimum of 5% of the numbers were verified against a hard copy of the data.

The arithmetic mean, standard deviation (SD) and inter-subject coefficient of variation (CV) were calculated for plasma diltiazem, desacetyldiltiazem and N-desmethyldiltiazem concentrations for each sampling time and regimen. As well, the arithmetic mean, SD and inter-subject CV were calculated for the AUC (0 - t hours) (ng·hr/mL), AUC (0 - infinity) (ng·hr/mL), C_{max} (ng/mL), T_{max} (hours), $t_{1/2}$ (hours), K_{el} (hour⁻¹) and r-value (the correlation coefficient of the most linear portion of the terminal elimination phase).

The calculation of these pharmacokinetic parameters is explained below.

1. Areas Under the Plasma Concentration-Time Curves

The AUC (0 - t hours) was derived where t is the time (t) of the last measurable (non-zero) plasma concentration (C_t) for each regimen. The AUC (0 - infinity) was calculated as:

$$(AUC_{0 - infinity}) = (AUC_{0 - t}) + \frac{C_t}{K_{el}}$$

where: C_t = the last non-zero plasma concentration for that regimen, and
 (AUC_{0-t}) = the AUC from zero time to the time of the last non-zero plasma concentration for that regimen; K_{el} calculations are explained overleaf.

2. Peak Plasma Concentrations and Time to Reach Peak Concentrations

The peak plasma concentration reached (C_{max}) and the time to reach peak concentration (T_{max}) were also determined for each subject and regimen.

3. Plasma Half-Life and Elimination Rate Constant

To calculate the elimination rate constant (K_{el}), regression analyses were performed on the natural log (Ln) of plasma concentration values (ng/mL, y-axis) versus time (hours, x-axis). Calculations were based on the most linear portion of the terminal elimination phase as shown in semi-log plots of individual subject data. An arrow in the plot indicates the point at which each calculation began. The K_{el} was taken as the slope multiplied by (-1) and the apparent half-life ($t_{1/2}$) as $Ln2/K_{el}$.

Individual analyses of variance (ANOVAs with factors including treatment, period, sequence, and subject within sequence) were carried out on the untransformed data to compare the T_{max} , $t_{1/2}$ and K_{el} between regimens. ANOVAs were also performed on the log-transformed data for AUC (0 - t hours), AUC (0 - infinity) and C_{max} . The transformations were based on a natural logarithmic scale. All ANOVAs were performed with the SAS General Linear Models Procedure (GLM). For all analyses, effects were considered statistically significant if the probability associated with 'F' was less than 0.050.

Based on the pair-wise comparisons of the log-transformed AUC (0 - t hours), AUC (0 - infinity) and C_{max} data, the intra-subject coefficient of variation, the relative ratios of the geometric means (calculated according to the formula: $e^{[Test-Reference]} \times 100\%$), and the 90% geometric confidence intervals were determined. In addition, the frequency distributions of the regimen differences and ratios among subjects were plotted.

EXPERIMENTAL RESULTS

Section 1.0: Plasma Diltiazem Data

This section presents the results of the pharmacokinetic and statistical analyses on the plasma diltiazem data of twenty-seven (27) evaluable subjects (n = 27).

Plasma Diltiazem Concentrations

The plasma diltiazem concentrations for each subject and sampling times are outlined in Table 1.1 for Regimen A (Andrx Pharmaceuticals, Inc. – Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsule formulation taken under fasting conditions) and in Table 1.2 for Regimen B (Aventis Pharmaceuticals, Inc. – Cardizem® CD (diltiazem HCl) 300 mg Capsule formulation taken under fasting conditions). The plots of the mean plasma diltiazem levels for the two (2) regimens over the 48.0 hour sampling period are presented in Figures 1.1 through 1.2 in linear and semi-log formats. The individual subject data, also presented in linear and semi-log formats, is displayed in Figures 1.3 through 1.83.

Figures 1.84 through 1.87 present the plots of the plasma diltiazem concentrations in linear format for all subjects in the test and reference groups.

Pharmacokinetic Parameters for Each Subject

Tables 1.3 and 1.4 report the diltiazem pharmacokinetic parameters for each subject according to regimen.

Area Under the Plasma Diltiazem Concentration-Time Curve (0 - t hours)

The area under the plasma diltiazem concentration-time curve (0 - t hours) was calculated for each subject and regimen (Table 1.5). The arithmetic means (\pm SD) are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC (0-t hours) (ng·hr/mL)	2459.96 \pm 1086.85	2818.93 \pm 1350.22

The ANOVA was performed on the log-transformed AUC (0 - t hours) data (Table 1.6). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on pair-wise comparisons of the AUC (0 - t hours) data. The results are presented in Table 1.7 and are reported below:

AUC (0 - t hours)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	82.23 % - 95.01 %	88.39 %	15.52 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - t hours) values among subjects are presented in Figures 1.A to 1.B.

Area Under the Plasma Diltiazem Concentration-Time Curve (0 - infinity)

The AUC (0 - infinity) data for each subject and regimen was evaluated and is presented in Table 1.8. The arithmetic mean (\pm SD) for each regimen is presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC(0 - infinity) (ng·hr/mL)	2583.31 ± 1151.26	2949.87 ± 1434.92

The ANOVA was performed on the log-transformed AUC (0 - infinity) data (Table 1.9). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the AUC (0 - infinity) data. The results are presented in Table 1.10 and are reported below:

AUC (0 - infinity)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ vs. CARDIZEM® CD	82.89 % - 95.36 %	88.90 %	15.06 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - infinity) values among subjects are presented in Figures 1.C to 1.D.

Peak Plasma Diltiazem Concentrations

The peak, or maximal, plasma diltiazem concentrations were determined for each subject and regimen (Table 1.11). The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
C_{max} (ng/mL)	121.29 ± 51.30	152.32 ± 70.88

The ANOVA was performed on the log-transformed C_{max} data (Table 1.12). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the C_{max} data. The results are reported in Table 1.13 and are presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

C_{max}	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XTTM (A) vs. CARDIZEM[®] CD (B)	73.84 % - 89.37 %	81.23 %	20.52 %

The frequency distribution of the regimen differences and ratios of the C_{max} values among subjects are presented in Figures 1.E to 1.F.

Time to Reach Peak Plasma Diltiazem Concentrations

The time to reach peak plasma diltiazem concentrations was determined for each subject and regimen (Table 1.14). The arithmetic means (\pm SD) are presented below:

	CARTIA XTTM (A) 1 x 300 mg	CARDIZEM[®] CD (B) 1 x 300 mg
T_{max} (hours)	11.22 \pm 4.70	7.22 \pm 4.41

The ANOVA was performed on the T_{max} (Table 1.15).

The Apparent Half-Life and Elimination Rate Constant of Plasma Diltiazem

Table 1.16 presents the apparent half-life of plasma diltiazem for each subject and regimen. The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XTTM (A) 1 x 300 mg	CARDIZEM[®] CD (B) 1 x 300 mg
$t_{1/2}$ (hours)	8.11 \pm 1.90	7.59 \pm 1.24

Table 1.17 reports the results of the ANOVA performed on the $t_{1/2}$ data.

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

The elimination rate constant of plasma diltiazem was calculated for each subject and regimen, and the results are presented in Table 1.18. The arithmetic means (\pm SD) are reported below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
K_{el} (hour ⁻¹)	0.089 \pm 0.017	0.094 \pm 0.015

The ANOVA was performed on the K_{el} data (Table 1.19). The correlation coefficient (r value) of the most linear portion of the terminal elimination phase was also determined for each subject and regimen (Table 1.20).

EXPERIMENTAL RESULTS

Section 2.0: Plasma Desacetyldiltiazem Data

This section presents the results of the pharmacokinetic and statistical analyses on the plasma desacetyldiltiazem data of twenty-seven (27) evaluable subjects ($n = 27$).

Plasma Desacetyldiltiazem Concentrations

The plasma desacetyldiltiazem concentrations for each subject and sampling times are outlined in Table 2.1 for Regimen A (Andrx Pharmaceuticals, Inc. – Cartia XTTM (diltiazem HCl extended release capsules, USP) 300 mg Capsule formulation taken under fasting conditions) and in Table 2.2 for Regimen B (Aventis Pharmaceuticals, Inc. – Cardizem[®] CD (diltiazem HCl) 300 mg Capsule formulation taken under fasting conditions). The plots of the mean plasma desacetyldiltiazem levels for the two (2) regimens over the 48.0 hour sampling period are presented in Figures 2.1 through 2.2 in linear and semi-log formats. The individual subject data, also presented in linear and semi-log formats, is displayed in Figures 2.3 through 2.83.

Figures 2.84 through 2.87 present the plots of the plasma diltiazem concentrations in linear format for all subjects in the test and reference groups.

Pharmacokinetic Parameters for Each Subject

Tables 2.3 and 2.4 report the desacetyldiltiazem pharmacokinetic parameters for each subject according to regimen.

Area Under the Plasma Desacetyldiltiazem Concentration-Time Curve (0 - t hours)

The area under the plasma desacetyldiltiazem concentration-time curve (0 - t hours) was calculated for each subject and regimen (Table 2.5). The arithmetic means (\pm SD) are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC(0-t hours)(ng-hr/mL)	300.74 \pm 215.98	315.15 \pm 216.80

The ANOVA was performed on the log-transformed AUC (0 - t hours) data (Table 2.6). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on pair-wise comparisons of the AUC (0 - t hours) data. The results are presented in Table 2.7 and are reported below:

AUC (0 - t hours)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	87.27 % - 101.50 %	94.12 %	16.24 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - t hours) values among subjects are presented in Figures 2.A to 2.B.

Area Under the Plasma-Desacetyldiltiazem Concentration-Time Curve (0 - infinity)

The AUC (0 - infinity) data for each subject and regimen was evaluated and is presented in Table 2.8. The arithmetic mean (\pm SD) for each regimen is presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC (0 - infinity) (ng·hr/mL)	368.34 ± 322.78	401.18 ± 361.57

The ANOVA was performed on the log-transformed AUC (0 - infinity) data (Table 2.9). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the AUC (0 - infinity) data. The results are presented in Table 2.10 and are reported below:

AUC (0 - infinity)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	88.58 % - 102.25 %	95.17 %	15.09 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - infinity) values among subjects are presented in Figures 2.C to 2.D.

Peak Plasma Desacetyldiltiazem Concentrations

The peak, or maximal, plasma desacetyldiltiazem concentrations were determined for each subject and regimen (Table 2.11). The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
C_{max} (ng/mL)	10.48 ± 6.87	11.06 ± 7.09

The ANOVA was performed on the log-transformed C_{max} data (Table 2.12). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the C_{max} data. The results are reported in Table 2.13 and are presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

C_{max}	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	87.62 % - 102.48 %	94.76 %	16.84 %

The frequency distribution of the regimen differences and ratios of the C_{max} values among subjects are presented in Figures 2.E to 2.F.

Time to Reach Peak Plasma Desacetyldiltiazem Concentrations

The time to reach peak plasma desacetyldiltiazem concentrations was determined for each subject and regimen (Table 2.14). The arithmetic means (\pm SD) are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
T_{max} (hours)	20.07 \pm 4.13	22.07 \pm 4.45

The ANOVA was performed on the T_{max} (Table 2.15).

The Apparent Half-Life and Elimination Rate Constant of Plasma Desacetyldiltiazem

Table 2.16 presents the apparent half-life of plasma desacetyldiltiazem for each subject and regimen. The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
$t_{1/2}$ (hours)	12.69 \pm 4.69	12.23 \pm 3.68

Table 2.17 reports the results of the ANOVA performed on the $t_{1/2}$ data.

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

The elimination rate constant of plasma desacetyldiltiazem was calculated for each subject and regimen, and the results are presented in Table 2.18. The arithmetic means (\pm SD) are reported below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
K_{e1} (hour ⁻¹)	0.060 \pm 0.015	0.060 \pm 0.013

The ANOVA was performed on the K_{e1} data (Table 2.19). The correlation coefficient (r value) of the most linear portion of the terminal elimination phase was also determined for each subject and regimen (Table 2.20).

EXPERIMENTAL RESULTS

Section 3.0: Plasma N-Desmethyldiltiazem Data

This section presents the results of the pharmacokinetic and statistical analyses on the plasma N-desmethyldiltiazem data of twenty-seven (27) evaluable subjects (n = 27).

Plasma N-Desmethyldiltiazem Concentrations

The plasma N-desmethyldiltiazem concentrations for each subject and sampling times are outlined in Table 3.1 for Regimen A (Andrx Pharmaceuticals, Inc. – Cartia XT™ (diltiazem HCl extended release capsules, USP) 300 mg Capsule formulation taken under fasting conditions) and in Table 3.2 for Regimen B (Aventis Pharmaceuticals, Inc. – Cardizem® CD (diltiazem HCl) 300 mg Capsule formulation taken under fasting conditions). The plots of the mean plasma N-desmethyldiltiazem levels for the two (2) regimens over the 48.0 hour sampling period are presented in Figures 3.1 through 3.2 in linear and semi-log formats. The individual subject data, also presented in linear and semi-log formats, is displayed in Figures 3.3 through 3.83.

Figures 3.84 through 3.87 present the plots of the plasma diltiazem concentrations in linear format for all subjects in the test and reference groups.

Pharmacokinetic Parameters for Each Subject

Tables 3.3 and 3.4 report the N-desmethyldiltiazem pharmacokinetic parameters for each subject according to regimen.

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

Area Under the Plasma N-Desmethyldiltiazem Concentration-Time Curve (0 - t hours)

The area under the plasma N-desmethyldiltiazem concentration-time curve (0 - t hours) was calculated for each subject and regimen (Table 3.5). The arithmetic means (\pm SD) are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC(0-t hours)(ng·hr/mL)	929.36 \pm 285.08	1014.65 \pm 325.54

The ANOVA was performed on the log-transformed AUC (0 - t hours) data (Table 3.6). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on pair-wise comparisons of the AUC (0 - t hours) data. The results are presented in Table 3.7 and are reported below:

AUC (0 - t hours)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	87.90 % - 96.42 %	92.06 %	9.94 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - t hours) values among subjects are presented in Figures 3.A to 3.B.

Area Under the Plasma N-Desmethyldiltiazem Concentration-Time Curve (0 - infinity)

The AUC (0 - infinity) data for each subject and regimen was evaluated and is presented in Table 3.8. The arithmetic mean (\pm SD) for each regimen is presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
AUC (0 - infinity) (ng·hr/mL)	1042.92 ± 325.60	1144.95 ± 381.10

The ANOVA was performed on the log-transformed AUC (0 - infinity) data (Table 3.9). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the AUC (0 - infinity) data. The results are presented in Table 3.10 and are reported below:

AUC (0 - infinity)	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	87.65 % - 96.07 %	91.76 %	9.86 %

The frequency distribution of the regimen differences and ratios of the AUC (0 - infinity) values among subjects are presented in Figures 3.C to 3.D.

Peak Plasma N-Desmethyldiltiazem Concentrations

The peak, or maximal, plasma N-desmethyldiltiazem concentrations were determined for each subject and regimen (Table 3.11). The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
C_{max} (ng/mL)	35.22 ± 9.07	37.23 ± 11.01

The ANOVA was performed on the log-transformed C_{max} data (Table 3.12). The 90% geometric confidence interval, ratio of means, and intra-subject coefficient of variation were also determined, based on the pair-wise comparisons of the C_{max} data. The results are reported in Table 3.13 and are presented overleaf:

BIOVAIL CONTRACT RESEARCH
 A DIVISION OF BIOVAIL CORPORATION
 STUDY # 2443 (B01-527PK-DILG12)

C_{max}	90% Geometric C.I.	Ratio of Means	Intra-Subject C.V.
CARTIA XT™ (A) vs. CARDIZEM® CD (B)	90.25 % - 101.17 %	95.55 %	12.27 %

The frequency distribution of the regimen differences and ratios of the C_{max} values among subjects are presented in Figures 3.E to 3.F.

Time to Reach Peak Plasma N-Desmethyldiltiazem Concentrations

The time to reach peak plasma N-desmethyldiltiazem concentrations was determined for each subject and regimen (Table 3.14). The arithmetic means (\pm SD) are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
T_{max} (hours)	15.04 \pm 3.66	15.07 \pm 5.12

The ANOVA was performed on the T_{max} (Table 3.15).

The Apparent Half-Life and Elimination Rate Constant of Plasma N-Desmethyldiltiazem

Table 3.16 presents the apparent half-life of plasma N-desmethyldiltiazem for each subject and regimen. The arithmetic means (\pm SD) were calculated and are presented below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
$t_{1/2}$ (hours)	10.93 \pm 2.33	10.96 \pm 1.84

Table 3.17 reports the results of the ANOVA performed on the $t_{1/2}$ data.

BIOVAIL CONTRACT RESEARCH
A DIVISION OF BIOVAIL CORPORATION
STUDY # 2443 (B01-527PK-DILG12)

The elimination rate constant of plasma N-desmethyldiltiazem was calculated for each subject and regimen, and the results are presented in Table 3.18. The arithmetic means (\pm SD) are reported below:

	CARTIA XT™ (A) 1 x 300 mg	CARDIZEM® CD (B) 1 x 300 mg
K_{el} (hour ⁻¹)	0.066 \pm 0.012	0.065 \pm 0.011

The ANOVA was performed on the K_{el} data (Table 3.19). The correlation coefficient (r value) of the most linear portion of the terminal elimination phase was also determined for each subject and regimen (Table 3.20).

CONCLUSIONS

The 90% geometric confidence intervals for diltiazem AUC_{0-t} , AUC_{0-inf} and C_{max} were 82.23 – 95.01%, 82.89 – 95.36% and 73.84 – 89.37%, respectively, with point estimates of 88.39%, 88.90% and 81.23% respectively. The test product therefore failed to demonstrate bioequivalence to the reference product. Metabolite data are provided as additional information.

 TABLE 2. 18. (Cont'd)

CRITERIA USED TO DETECT 'NO CALCULATION' (NC) OF K_{e1} ($K_{e1} = .$)
 Compound: DESACETYLDILTIAZEM

Treatment Previous group Concentration	Subject Number Reason	r-value (a)	Estimated K_{e1} (b)	The Max Concen in linear range (c)	C_{max} Concentration (d)	Last Concentration (e)
A 5.556	03 4	0.9683	-0.0506	16.237	16.523	5.579

CRITERIA:

1. Poor linearity: Terminal linear range can not be detected with $r \geq 0.95$ (a)
2. Terminal linear range increases in concentration (positive slope), $K_{e1} \geq 0$ (b)
3. Terminal linear range contains C_{max} (c), (d)
4. Sudden increase in last concentration (Last concentration > Previous Concentration (e), (f))
