Here is a copy of the e-mail that I sent to Ms. Cox
June Fisher

Dear Ms. Cox:

My remarks at this meeting will address the issue of healthcare worker health and safety as a critical component of patient safety. I will focus on the area of safety devices for primary prevention of healthcare worker exposure to blood as a paradigm for worker safety considerations in the development of all devices and drug delivery systems. In this presentation emphasis will be given to (1) the need for systematic simulation trials that recreate the critical factors of the clinical setting (2) the need for systematic pilot testing of these devices (3) the need to involve the end user in the development as well as the evaluation and selection of devices.

Will a slide projector and carousel be available?

Yours truly,
June M. Fisher, M.D.
