

**Appendix 7. ANIMAL STUDIES: OATRIM [INCLUDING OATRIM (BETATRIM™)], OAT EXTRACTS, OAT GUMS AND ENRICHED OAT BRANS**

Study	Animal Model, Test Duration, Lipotropic Substances	Intervention Products	Results % Change Compared to Control					Comments					
			TC	HDL-C	TG	LC	LTG						
Chen et al, 1981	Male rats, 4 per group; test period: 3 wks; addition of 1% CHOL plus 0.2% cholic acid.	10% oat gum (66% $\beta$ -glucan); 36.5% oat bran; 10% cellulose (control)	OG: -41*	+76*	-59*	-74*	-65*	OB: -24*	+62*	-7	-46*	-46*	Both oat gum and oat bran significantly lowered plasma and liver TC and increased HDL-C.  *Sig. different from control.
Freiburger and Gallaher, 2000 [Quaker: Study 1]	Single meal-fed study; male rats, 12 per test group; 5 per control group; test duration: 2 hours.	5 g meal + one of the three formulations of Oatrim (BetaTrim™): 4% $\beta$ -glucan -Low 12% $\beta$ -glucan -Med 20% $\beta$ -glucan - Hi; Oatmeal; CE -Cellulose control	<p>VISCOSITY (mPa*s)</p> <p><u>Oatrim (BetaTrim™)</u></p> <p>4% 12% 20%</p> <p>17.4 367.9 1,426.8</p> <p>A strong correlation (R = 0.986) was observed between log viscosity and the percent of <math>\beta</math>-glucan in the fiber source.</p>					The Med and Hi Oatrim (BetaTrim™) had similar and significantly higher viscosity than oatmeal and oat bran. Intestinal contents viscosity increased progressively from Low to Hi Oatrim (BetaTrim™).					
Freiburger and Gallaher, 2001 [Quaker: Study 2]	Male rats, 10 per group; test duration: 28 days – Chronic feeding study; CHOL added at 0.25%, and fiber was at 5% of all diets.	Test formulations included; Oatrim BetaTrim™): 4% $\beta$ -glucan -Low 12% $\beta$ -glucan - Med 20% $\beta$ -glucan- Hi; Low viscosity HPMC; Hi viscosity HPMC; CE -Cellulose control	<p>VISCOSITY (mPa*s)</p> <p><u>Oatrim (BetaTrim™)</u></p> <p>4% 12% 20% <u>L-HPMC H-HPMC CE</u></p> <p>11.2 62.0 321.9 541.5 714.2 4.6</p> <p>Intestinal contents supernatant viscosity for all 3 Oatrim (BetaTrim™) were significantly different from control CE.</p> <p>A significant decrease in total liver CHOL was found in all groups compared to the control CE (p&lt;0.05). A significant inverse correlation was observed between total liver cholesterol and log viscosity (R=0.90; P=0.015). Fecal bile acid excretion was significantly increased in all 3 Oatrim (BetaTrim™) compared to control CE and inversely correlated with total liver cholesterol (R=0.87; P=0.02).</p>					The cholesterol lowering and increased bile acid excretion was observed with all 3 Oatrim (BetaTrim™). These results are consistent with previous observations with rolled oats and oat bran. However, no significant effect on was observed for cholesterol absorption.					

Abbreviations: CHOL: cholesterol; TC: Total cholesterol; LDL-C: Lipoprotein cholesterol; HDL-C: high-density cholesterol; TG: triglyceride; LC: liver cholesterol; LTG: liver triglyceride OG: Oat gum; OB: Oat bran; HPMC: hydroxypropylmethylcellulose; CE: cellulose; EOF: enriched oat flour;

**Appendix 7. ANIMAL STUDIES: OATRIM [INCLUDING OATRIM (BETATRIM™)], OAT EXTRACTS, OATS GUMS AND ENRICHED OAT BRANS (cont'd.)**

Study	Animal Model, Test Duration, Lipotropic Substances	Intervention Products	Results % Change Compared to Control	Comments								
Gallaher et al, unpublished [Quaker: Study 3]	Single meal-fed study; male rats, 12 per test group; 5 per control group; test duration: 2 hours.	Oatrim (BetaTrim™) processed enzymatically; 20% β-glucan concentration  Oatrim (BetaTrim™) processed using the acid/base method; 20% β-glucan concentration	Intestinal contents supernatant viscosity of the sample from both processing methods was >1000 mPa*s/% β-glucan. No statistically significant difference was observed between the two sample (p=0.43).	Significant viscosity was observed for Oatrim (BetaTrim™) from both processing methods. The similarity in viscosity/% β-glucan of sample from both processing methods indicates efficacy per gram β-glucan is not different for either processing method.								
Inglett & Newman, 1994	Chicks, 8 per group; test period: 10 days; addition of 0.5% CHOL	26.4% Oatrim-10 (10% β-glucan); 26.4% corn (control)	<table border="0"> <tr> <td><u>TC</u></td> <td><u>LDL-C</u></td> <td><u>HDL-C</u></td> <td><u>TG</u></td> </tr> <tr> <td>-18*</td> <td>-48*</td> <td>+18</td> <td>-15</td> </tr> </table> <p>*Sig. different from control.</p>	<u>TC</u>	<u>LDL-C</u>	<u>HDL-C</u>	<u>TG</u>	-18*	-48*	+18	-15	Significant reductions in TC and LDL-C. No significant reductions for HDL-C and TG. Oatrim chicks gained significantly less weight than controls.
<u>TC</u>	<u>LDL-C</u>	<u>HDL-C</u>	<u>TG</u>									
-18*	-48*	+18	-15									
Inglett et al, 1994	Chicks, 24 per group; test period: 14 days; addition of 0.5% CHOL	38% Oatrim-10 (8.6% β-glucan); 29.35% corn (control)	<table border="0"> <tr> <td><u>TC</u></td> <td><u>LDL-C</u></td> <td><u>HDL-C</u></td> <td><u>TG</u></td> </tr> <tr> <td>-40*</td> <td>-61*</td> <td>-6</td> <td>-3</td> </tr> </table> <p>*Sig. different from control.</p>	<u>TC</u>	<u>LDL-C</u>	<u>HDL-C</u>	<u>TG</u>	-40*	-61*	-6	-3	This study confirms the cholesterol lowering efficacy findings that Inglett & Newman (1994) observed in the pilot study.
<u>TC</u>	<u>LDL-C</u>	<u>HDL-C</u>	<u>TG</u>									
-40*	-61*	-6	-3

Study	Animal Model, Test Duration, Lipotropic Substances	Intervention Products	Results % Change Compared to Control	Comments																												
Malkki et al, 1995	Male rats, 10 per group; test period: 3 wks; addition of 1% CHOL and 0.2% cholic acid	OBC* to provide: <b>1.5% β-glucan;</b> <b>3.0% β-glucan;</b> <b>4.5% β-glucan;</b> 7.2% cellulose control  *highly concentrated, like Oatrim	All 3 doses lowered TC compared to control, but increasing the dose caused no significant increase in effect. All 3 doses had significantly higher HDL-C levels than the control.	Authors state that this study confirms early observations (Malkki et al, 1992; Cereal Chem. 69:647-653) on the superiority of the hypocholesterolemic effect of enriched/concentrated oat bran over untreated regular oat bran at a similar level of β-glucan																												
Oda et al, 1994	Male rats, 8 per group; test period: 14 days; addition of 20% coconut oil	Diet: 2% oat gum (using 65% β-glucan source); Control diet: 2% cellulose	<table border="0"> <tr> <td><u>TC</u></td> <td><u>TG</u></td> <td><u>LC</u></td> <td><u>LTG</u></td> </tr> <tr> <td>-17*</td> <td>-46*</td> <td>-25*</td> <td>-46*</td> </tr> </table> *Sig. different from control.	<u>TC</u>	<u>TG</u>	<u>LC</u>	<u>LTG</u>	-17*	-46*	-25*	-46*	The β-glucan in the oat gum significantly lowered TC and TG in both serum and liver.

**Appendix 7. ANIMAL STUDIES: OATRIM [INCLUDING OATRIM (BETATRIM™)], OAT EXTRACTS, OAT GUMS AND ENRICHED OAT BRANS (cont'd.)**

Study	Animal Model, Test Duration, Lipotropic Substances	Intervention Products	Results			Comments
			% Change Compared to Control			
			<u>TC</u>	<u>LDL-C</u>	<u>HDL-C</u>	
Yokoyama et al, 1998	Male hamsters, 6 per group; test period: 21 days; addition of 10% hydrogenated coconut oil and 0.2% cholesterol	14.9% EOF (29.1% $\beta$ -glucan); 39.6% Oatrim-10 (10.6% $\beta$ -glucan); 67.3% Oatrim-5 (6.4% $\beta$ -glucan); 40.1% OH (0% $\beta$ -glucan); Control: 14.7% cellulose and 50.8% cornstarch	EOF: -21 O-10: -36* O-5: -32* OH: -17*	+16 -42* -67* -51*	-26* -22* -20* -6	TC, LDL-C, and HDL-C were significantly reduced by Oatrim-10 and Oatrim-5. TC and LDL-C were significantly reduced by OH. EOF did not significantly reduce TC or LDL-C. The authors suggest the high Molecular Weight of EOF and processing may have contributed to EOF's weak effect. (The viscosity of linear polymers is related to molecular weight.)

Abbreviations: CHOL: cholesterol; TC: Total cholesterol; LDL-C: Lipoprotein cholesterol; HDL-C: high-density cholesterol; TG: triglyceride; LC: liver cholesterol; LTG: liver triglyceride; OG: Oat gum; OB: Oat bran; HPMC: hydroxypropylmethylcellulose; CE: cellulose; EOF: enriched oat flour

Note: One Oatrim study found in the literature in abstract form is not included here because the  $\beta$ -glucan concentration was not reported. Newman RK, Inglett GE, Newman CW, Hofer PJ, Wang DL, 1993. Beta-glucan concentrates from oats and barley lower cholesterol in chicks. FASEB J A:739 (Abstract).
