Re: Docket No. 2004Q-0083: Daily consumption of 40 ounces of typical green tea containing 710µg/mL natural (-)-epigallocatechin gallate (EGCG) may reduce the risk of certain forms of cancer. ...

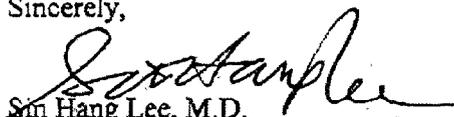

Dear Mr. Bradshaw:

I telephoned Mr. Vincent de Jesus at the CFSAN office this morning, asking if the FDA would further postpone its decision on the above-referenced green tea health claim application. Mr. de Jesus told me that I should wait for your telephone call and a formal letter from you for your final decision.

Now it is almost the end of the business day, June 17, 2005. I have not heard from you either by telephone or by fax. My attempts to contact you by telephone have not been successful. Please let me know if I can offer you more information or data to facilitate your decision. As I have mentioned repeatedly in my previous letters, I am always prepared to travel to the FDA to answer any scientific questions related to this application. Please direct me how to proceed. As you know, I have no prior experience on this matter.

Thank you for your assistance.

Sincerely,

  
Sin Hang Lee, M.D.
