Dear Doctor and Staff:

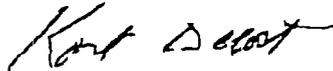

As you may be aware, there is a shortage of animal derived conjugated estrogen due to deaths of breeding mares. Premarin and Prempro are those products most affected by this shortage.

This may be a good time to switch your patients currently on conjugated estrogens to Bio-Identical Hormone Replacement Therapy.

Bio-Identical Estrogen Therapy consists of using estriol, estrone and estradiol in an 8:1:1 ratio. This mimics the levels and types of estrogen found in the human female.

This product can be compounded in combinations with other hormones, i.e. progesterone or testosterone, and is available in both topical and oral preparations. If you have any questions don't hesitate to call Kort or Lisa at the pharmacy. Our number is 295-3463.

Respectfully,

Kort Delost, RPh
