RE: LYCOPENE-10

Dear Sir / Madam:

This is a 30-day notification of a statement of nutritional support for a dietary supplement. The product name is **Andrew Lessman's LYCOPENE-10**. The structure / function claims on all sizes and configurations of this product are identical. They are as follows:

Lycopene is an extremely powerful fat-soluble anti-oxidant that protects a wide variety of lipid-based tissues and organs from free radical damage. Lycopene is of particular importance to women because it is highly concentrated in breast tissue, thereby protecting these delicate tissues from oxidative damage. Mother Nature does not play favorites, since Lycopene is equally important to men because it is the most abundant protective anti-oxidant present in the prostate gland. Preliminary research suggests that Lycopene's anti-oxidant benefits help protect the prostate from oxidative free radicals and support normal prostate function. As the major carotenoid found in tomatoes, Lycopene is one of the primary nutrients associated with the healthy Mediterranean diet and its role in helping to protect the cardiovascular system.

Respectfully Submitted,

Dr Nancy Steely, ND
