FDA Adverse Event Reporting System (FAERS)

FOIA Case Report Information

Disclaimers:

Submission of a safety report does not constitute an admission that medical personnel, user facility, importer, distributor, manufacturer or product caused or contributed to the event. The information in these reports has not been scientifically or otherwise verified as to a cause and effect relationship and cannot be used to estimate the incidence of these events.

Data provided in the Quarterly Data Extract (QDE) or a FAERS FOIA report are a snapshot of FAERS at a given time. There are several reasons that a case captured in this snapshot can be marked as inactive and not show up in subsequent reports. Manufacturers are allowed to electronically delete reports they submitted if they have a valid reason for deletion. FDA may merge cases that are found to describe a single event, marking one of the duplicate reports as inactive. The data marked as inactive are not lost but may not be available under the original case number.

The FOIA case report information may include both Electronic Submissions (Esubs) and Report Images (Non-Esubs). Case ID(s) will be displayed under separate cover pages for the different submission types.

Esub Case ID(s) Printed:

Event/Problem Narrative:

Hylands Teething Tablets Child took Hylands Teething Tablets, 2 tablets every 3 - 4 hours for one day. Child developed a red bumpy raised rash covering entire back from neck to waist, spreading to his sides and shoulders. Child became irritable and agitated as well. Child had no change in diet, laundry detergent, new clothing or any other circumstances preceding this incident. WILSONJ: |*********| 2011-11-10-08.48.14 |*********| USFDAMWVOLUNTARY_195958_9423_20111110.xml Route To: AERS : Electronic

Relevant Medical History:

No preexisting medical conditions. Child was teething. Child is caucasion. No other mitigating factors.

Event/Problem Narrative:

Spontaneous report from the USA of LIGHTHEADED, NAVICULAR BONE FRACTURE, CHEST PAIN, COMPRESSION FRACTURE DEFORMITY OF T12, DEGENERATIVE JOINT DISEASE, STABBED IN THE ABDOMEN, PHYSICAL PAIN/DISCOMFORT AND SUFFERING, EMOTIONAL PAIN AND SUFFERING, EMOTIONAL INJURY, SUSTAINED SEVERE AND PERMANENT PHYSICAL INJURIES, FRIGHT, NERVOUSNESS and ANXIETY/WORRY/APPREHENSION and non-serious NAUSEOUS, THYROID NODULE, URINARY TRACT INFECTION, FALL, WRIST INJURY, PAIN, CHEST PAIN, OBSTRUCTIVE SLEEP APNEA, SNORING, BACK PAIN, CELLULITIS OF RIGHT FOOT, RASH ON LEGS, FOOT AND ELBOWS, DRUG REACTION, BLOOD GLUCOSE 234, AST 56, ALT 135, A1C 8.2, CHOLESTEROL 245, LDL 52, FELL DOWN THE STAIRS, RIGHT HAND PAIN, LEFT GREAT TOE PAIN, BACK PAIN WORSENED, PUSTULAR ERUPTION ON FOOT, AIR PURIFIER DROPPED ON HEAD, BLURRED VISION, FORGETFULNESS, RASH, COUGH WITH SPUTUM, DIFFICULTY TAKING A DEEP BREATH, GENERALIZED ACHES TO ANKLES AND KNEES, FATIGUE, GLUCOSE 231, AST 63, ALT 99, A1C 8.7, TRIGLYCERIDES 250, URINE GLUCOSE 1000, DIABETES MELLITUS WORSENED, LEG PAIN, NUMBNESS, UPPER RESPIRATORY INFECTION, FALLING, SPRAINED ANKLE, BACK PAIN THAT INTERFERED WITH NORMAL DAILY FUNCTIONS, TRIGLYCERIDES 288, CHOLESTEROL 238, GLUCOSE 165 and ALT 105 with VICODIN (HYDROCODONE/ACETAMINOPHEN). On unknown dates, the patient experienced PHYSICAL PAIN/DISCOMFORT AND SUFFERING, EMOTIONAL PAIN AND SUFFERING, EMOTIONAL INJURY, SUSTAINED SEVERE AND PERMANENT PHYSICAL INJURIES, FRIGHT, NERVOUSNESS and ANXIETY/WORRY/APPREHENSION. On 27 Jul 2007, the patient experienced LIGHTHEADED and NAUSEOUS. On 27-JUL-2007, the patient became light beaded and nauseous after taking Vicodin. The lightheadedness and nausea resolved the same day, and Vicodin use continued. On 27 Jul 2007, the LIGHTHEADED and NAUSEOUS resolved. On 09 Aug 2007, the patient experienced THYROID NODULE. On 09-AUG- 2007, magnetic resonance imaging (MRI) revealed a thyroid nodule. Thyroid-stimulating hormone {TSH) was within normal limits (WNL), andit was Ultimately determined that that thyroid nodule was of no consequence. On 02 Oct 2007, the patient experienced URINARY TRACT INFECTION. On 11 Oct 2007, the patient experienced FALL, WRIST INJURY, PAIN and NAVICULAR BONE FRACTURE. On 11-OCT-2007, the patient fell, injured his wrist, and was in pain. An x-ray revealed a possible subtle fracture along the neck of the navicular bone, and the wrist was splinted. The information regarding resolution and other treatment could not be deciphered. On 26 Nov 2007, the patient experienced TRIGLYCERIDES 288, CHOLESTEROL 238, GLUCOSE 165 and ALT 105. On 26-NOV-2007, lab work was repeated and revealed TSH WNL, triglycerides 288 (30-200), cholesterol 238 (less than

200), glucose 165 (65-115), AST 45 (13-40}, and ALT 105 (10-50). On 09-JAN-2008, his A1C was 6,2 (4.8-6.0). On 14-JAN-2008, the patient's medical records note controlled diabetes mellitus. On 12 Mar 2008, the patient experienced CHEST PAIN. On 12-Mar-2008, the patient experienced chest pain. Troponins, cardiac markers, electrocardiogram (EKG) and a chest x-ray were within normal limits. He was treated with Aspirin (acetylsalicylic acid) 325 mg. On 02 Jun 2008, the patient experienced OBSTRUCTIVE SLEEP APNEA, SNORING and BACK PAIN. Medical records from 02-JUN-2003 note sleep apnea, snoring, and continued back pain from previous falls. He was advised to schedule a sleep study to further evaluate the sleep apnea, but the consumer refused. On 03 Jun 2008, the patient experienced CELLULITIS OF RIGHT FOOT. On 03-JUN-2008, he was diagnosed with cellulitis of the right foot and treated with Augmentin (amoxicillin and clavulanate). On 10 Jun 2008, the patient experienced RASH ON LEGS, FOOT AND ELBOWS and DRUG REACTION. On 10-JUN-2008, the patient was re-evaluated as a rash had spread to his legs, fact, and elbows. He was diagnosed with a drug reaction, and treatment with lisinopril and HCTZ were discontinued. He was started on Norvasc (amlodipine besylate)and treated with clobetasol and another undecipherable medication. On (b) (6) the patient experienced CHEST PAIN and BLOOD GLUCOSE 234. On (b) (6) he was hospitalized for chest pains. He requested discharge on (b) (6) prior to seeing a cardiologist as he felt his questions were not being answered. His blood glucose during hospitalization was 234. On 20 Oct 2008, the patient experienced AST 56, ALT 135, A1C 8.2, CHOLESTEROL 245 and LDL 52. On 20-OCT-2008, an EKG was within normal limits and blood work revealed glucose 151 (65-118), AST 56 (13-40), ALT 135 (10-50), A1C 8.2 (4.8-6.0), cholesterol 245 (less than 200), triglycerides 201 (30-200), low density lipoprotein (LDL) 152 (less than 100), Metformin and another undecipherable mediation were started. On 27 Jan 2009, the patient experienced FELL DOWN THE STAIRS, RIGHT HAND PAIN, LEFT GREAT TOE PAIN, BACK PAIN and COMPRESSION FRACTURE DEFORMITY OF T12. On 27-JAN-2009, the patient fell down the stairs and experienced right hand, left great toe, and back pain. X-rays revealed no fractures of the toe or hand. Thoracic spine x-ray revealed a mild compression fracture deformity of T12. On 28 Jan 2009, the patient experienced DEGENERATIVE JOINT DISEASE. Computed tomography (CT) scan of the thoracic spine performed on 28-JAN-2009 showed mild degenerative joint disease (DJD) of T9-T10, T10-T11, and a compression fracture deformity of T12 which appeared chronic in nature. No acute findings were noted. The patient was treated with Vicodin, Flexeril, and Motrin (ibuprofen) and was off of work. He was switched to Tramadol in FEB-2009 and was 30% improved by MAR-2009. He started physical therapy {PT) on 30-MAR-2009. On 20 Apr 2009, the patient experienced BACK PAIN WORSENED and PUSTULAR ERUPTION ON FOOT. On 20-APR-2009, he returned to work and his back pain worsened. Flexeril was restarted as was Lodine (etodolac). He also developed a pustular eruption on his foot that was treated with Bactrim (sulfamethoxazole and trimethoprim) DS for 7 days. In (b) (6) the patient experienced STABBED IN THE ABDOMEN, AIR PURIFIER DROPPED ON HEAD, PAIN, BLURRED VISION, FORGETFULNESS, RASH, COUGH WITH SPUTUM, DIFFICULTY TAKING A DEEP BREATH, GENERALIZED ACHES TO ANKLES AND KNEES and FATIGUE. Medical records from (b) (6) show that the patient was stabbed in the abdomen and had an air purifier dropped on his head. He was experiencing pain, blurred vision, forgetfulness, rash, a cough with sputum, difficulty taking a deep breath,

Case ID: 8291771

generalized aches to the ankles and knees, and fatigue. Tetanus and diphtheria toxoids were administered. A CT scan of the head was negative. On 13 Jul 2009, the patient experienced GLUCOSE 231, AST 63, ALT 99, A1C 8.7 and TRIGLYCERIDES 250. On 13-JUL-2009, blood work revealed glucose 231 (65-115), AST 63 (13-40), ALT 99 (10-50}, A1C 8.7 (4.8-6.0), triglycerides 250 (30-200), and high-density lipoprotein (HDL) 28 (greater than 40). On 16 Jul 2009, the patient experienced URINE GLUCOSE 1000. On 16-JUL-2009, urinalysis revealed glucose 1000 and ketones 5 (negative). Treatment with Bactrim, Loctine, and Flexeril were discontinued and the patient was started on started simvastatin 20 mg, metformin 500 mg, Lantus Solostar (insulin glargine (rDNA origin)) 15 units Subcutaneously (SQ) at night, and he got a glucometer to check his glucose at home. On 27 Jul 2009, the patient experienced DIABETES MELLITUS WORSENED. On 27-JUL-2009, the patient's diabetes worsened. Aspirin 81 mg daily and glucagon for acute hypoglycemic events were added to his diet, exercise and weight loss were stressed. On 25-AUG-2009, Metformin was discontinued and Janumet (metformin and sitagliptin) was added. On 17 Sep 2009, the patient experienced LEG PAIN and NUMBNESS. On 17-SEP-2009, he had a sleep study that confirmed obstructive sleep apnea. On 23 Sep 2009, the patient experienced BACK PAIN. On 23-SEP-2009, the patient was evaluated for continued back pain and leg painand numbness. A thoracic spine x-ray showed that his spine was stable, and an MRI revealed that the chronic compression fracture was unchanged. On 30 Oct 2009, the patient experienced UPPER RESPIRATORY INFECTION. On 30-OCT-2009, the patient was diagnosed with a URI and treated with Tamiflu (oseltamivir phosphate) and Zofran (ondansetron). On 01 Nov 2009, the patient experienced FALLING and SPRAINED ANKLE. On 01-NOV-2009, he was evaluated after falling while drunk and spraining his ankle. An x-ray of his ankle showed no fracture. He was placed in an air cast, given crutches, and treated with Etodolac. By 10-NOV-2009, his ankle was 98% improved. On 04 Jan 2010, the patient experienced BACK PAIN THAT INTERFERED WITH NORMAL DAILY FUNCTIONS. On 04-JAN-2010, he was evaluated for continued back pain that interfered with his normal daily functions and working. He reported drinking 3-4 beers daily to help with the pain. He restarted PT on 06-JAN-2010. On 21-JAN-2010, he reported feeling better overall and that PT was going well. It was also reported that as a result of events due to product use, the patient experienced physical pain/discomfort and suffering, emotional pain and suffering, emotional injury, sustained severe and permanent physical injuries, and experienced fright, nervousness, and anxiety/worry/apprehension. It was alleged that the products were unreasonably dangerous and defective. Except where noted, the outcome and current status of the events were not reported. It is not noted when or if product use was discontinued in response to any of the reported events. It was also reported that HYDROXYCUT products were negligently manufactured, contained manufacturing defects, were not effective and were not made in accordance with product specifications or performance standards. HYDROCHLOROTHIAZIDE, LISINOPRIL (LISINOPRIL DIHYDRATE) and HYDROXYCUT were also considered suspect. The patient was treated with AUGMENTIN, NORVASC, CLOBETASOL, METFORMIN, FLEXERIL, MOTRIN, TRAMADOL, LODINE, BACTRIM, TETANUS TOXOID, DIPHTHERIA TOXOID, SIMVASTATIN, LANTUS SOLOSTAR, JANUMET, TAMIFLU, ZOFRAN and ETODOLAC.

********** Laboratory information/comments 11 Oct 2007: Wrist X-ray: Possible subtle fracture along the neck of the navicular bone. 12-Mar-2008: Cardiac Markers: WNL 12-Mar-2008:

Case ID: 8291771

Troponins: WNL 27 Jan 2009: Toe and wrist x-ray: WNL 27 Jan 2009: Thoracic spine X-ray: Mild compression fracture deformity of T12 28 Jan 2009: CT thoracic spine: Mild DJD T9-T10, T10-T11, compression fracture deformity of T12 which appears chronic in nature, no acute findings. 23 Sep 2009: Thoracic spine: Stable 23 Sep 2009: MRI Thoracic spine: Chronic compression fracture unchanged. 01 Nov 2009: Ankle x-ray: No fracture.

Relevant Medical History:

On 04-JAN-2007, after starting the product, the patient experienced recurrent plantar fasciitis and foot pain which was treated with an injection of lidocaine, Marcaine and Celestone Soluspan (betamethasone injectable suspension). On an unspecified date in FEB-2007, the patient fell and injured his back. He was diagnosed with thoracolumbar Strain and treated with Flexeril (cyclobenzaprine hydrochloride) and another undecipherable medication, On 05-FEB-2007, he developed an unspecified viral infection with symptoms of fatigue and body aches. On 08-FEB-2007, he was diagnosed with pharyngitis after developing a headache, coughing and a sore throat. Treatment included amoxicillin. On an unspecified date in Jun-2007, the consumer experienced myalgia (resolved on an unknown date). On 15-JUN-2007, an abdominal ultrasound revealed poss ble fatty infiltration of the liver. On 21-JUN-2007, the patient's ALT was 226 (10-50) and his AST was 138 (13-40). On 27-JUN-2007, the patient was evaluated for burning stomach pain and diagnosed with gastritis. Treatment included omeprazole 20 ng. On 28-JUN-2007, a gastroenterologist confirmed the patient's fatty liver disease and recommended weight loss, decreasing alcohol intake, and rechecking the liver function tests in 3 months. Preferred Term (MedDRA Â© Version: 17.0)	ReC
Cerebral vasoconstriction	NA
Drug interaction	NA

Case ID: 8291776

Event/Problem Narrative:

Date of initial report: 21-NOV-2011 A literature report from the J Med Case Reports, entitled " Reversible cerebral vasoconstriction syndrome in a patient taking citalopram and Hydroxycut: a case report," describes a 65 year old Caucasian woman on longstanding citalopram who developed reversible cerebral vasoconstriction syndrome two weeks after beginning to take Hydroxycut. Both citalopram and Hydroxycut were discontinued. Patient received treatment with nimodipine. At follow up, there was significant improvement of her left visual field deficit and CT angiography six weeks after discharge showed marked resolution of cerebral vasoconstriction. " A 65-year-old Caucasian woman presented to her local hospital with sudden-onset, bifrontal, pounding headache described as “getting hit in the head with an axe.” The headache was the worst of her life and did not improve after she took acetaminophen, caffeine, and butalbital. There was hyperacusis, photophobia and nausea. Noncontrast head computed tomography (CT) and brain magnetic resonance imaging (MRI) at the time of admission were normal and she was treated with prednisone for presumed intractable migraine. Aside from a similar but milder headache one week prior to her current presentation, she reported only a sparse past history of migraines that ceased after her hysterectomy and no family history of migraines or strokes. She had hyperlipidemia treated with simvastatin 40mg daily, lumbar spinal compression fractures, multiple miscarriages and depression that had been treated for several years with citalopram 20mg daily. On further questioning, our patient reported taking the weight-loss supplement Hydroxycut beginning two weeks prior to her thunderclap headache. On admission, her body mass index was 22.3, and she was normotensive on lisinopril 10mg daily. She had not previously been on lisinopril, which was presumably initiated at the outside hospital for prednisone-induced hypertension. We held the lisinopril for the duration of her hospitalization given her normal to low blood pressures. Her fasting lipid panel revealed cholesterol 223mg/dL, triglycerides 141mg/dL, high density lipoprotein 61mg/dL, low density lipoprotein 134mg/dL, very low density lipoprotein 28mg/dL and lipoprotein(a) 6mg/dL. Two days after admission, she developed bilateral leg weakness and left-sided visual disturbances that she described as “blank lines.” A repeat MRI revealed areas of restricted diffusion consistent with acute infarcts in the bilateral anterior cerebral artery territories and in her right occipital lobe (Figure 1). The following investigations were unrevealing: hypercoagulability studies, rheumatic and vasculitic screening labs, magnetic resonance venography, transthoracic echocardiogram with bubble contrast, and Holter monitoring. LA lumbar puncture, performed while our patient was being treated with prednisone, revealed 0 white blood cells (WBC), 48 red blood cells (RBC), cerebrospinal fluid (CSF) protein 27mg/dL, glucose 81mg/dL and no xanthochromia. CT angiography (CTA) was obtained, which revealed multifocal segmental cerebral artery vasoconstriction, most prominent in the bilateral anterior and posterior cerebral arteries (Figures 2A and 2B). We made the diagnosis of RCVS and began treatment with nimodipine 30mg three times daily. Over the subsequent days, her headache resolved and her vision and leg weakness improved. Our patient’s blood pressures at admission and prior to starting nimodipine were 92-116/54-58mmHg on no antihypertensive medications. After beginning nimodipine for RCVS, her systolic blood pressures ranged from the high 80s to low 100s (mmHg). We administered intravenous fluid bolus as needed to keep her systolic blood pressure above 90mmHg, in an effort to balance maintaining adequate cerebral perfusion while continuing nimodipine treatment for RCVS. Our patient tolerated this well without any

Case ID: 8291776

clinical decline or symptomatic hypotension. She was discharged on nimodipine and advised not to take Hydroxycut and citalopram, which had been discontinued when a diagnosis of RCVS was first suspected. At the time of discharge, her systolic blood pressures remained in the 90s to low 100s mmHg. Therefore, she was advised to measure her blood pressure at home and take nimodipine only if systolic blood pressure was over 100mmHg. Following discharge, our patient experienced no headaches and no recurrence of her presenting symptoms. At a follow-up appointment, she had no residual leg weakness and significant improvement of her left visual field deficit, although she reported that her vision had not returned to her baseline. CTA performed six weeks after discharge showed marked resolution of cerebral vasoconstriction, confirming the diagnosis of RCVS (Figures 2C and 2D)." See article for further details.

Case ID: 8349109

Event/Problem Narrative:

Case number PHHY2012US003686 is an initial literature report received on 16 Jan 2012. The authors discuss reversible cerebral vasoconstriction syndrome in a patient taking citalopram and hydroxycut. Medical history of the patient included migraines, hyperlipidemia, lumbar spinal compression fractures and multiple miscarriages. The patient was started on citalopram (manufacturer unknown) 20mg daily, unknown route and duration for depression from an unknown date years ago. The patient was also on Hydroxycut unknown dose, route and duration for weight loss from an unknown date. On an unknown date the patient reported bifrontal, pounding headache, hyperacusis, photophobia, nausea and was hospitalzied. Noncontrast head computed tomography (CT) and brain magnetic resonance imaging (MRI) at the time of admission were normal and she was treated with prednisone for presumed intractable migraine. Two days after admission, she developed bilateral leg weakness and left-sided visual disturbances that she described as blank lines. A repeat MRI revealed areas of restricted diffusion consistent with acute infarcts in the bilateral anterior cerebral artery territories and in her right occipital lobe. CT angiography (CTA) was obtained, which revealed multifocal segmental cerebral artery vasoconstriction, most prominent in the bilateral anterior and posterior cerebral arteries. The patient was diagnosed with reversible cerebral vasoconstriction syndrome (RCVS) and began treatment with nimodipine 30mg three times daily. Over the subsequent days, her headache resolved and her vision and leg weakness improved. Our patients blood pressures at admission and prior to starting nimodipine were 92-116/54-58mmHg on no antihypertensive medications. The patient tolerated the treatment without any clinical decline or symptomatic hypotension. She was discharged on nimodipine and advised not to take Hydroxycut and citalopram, which had been discontinued when a diagnosis of RCVS was first suspected. Following discharge, the patient experienced no headaches and no recurrence of her presenting symptoms. The authors concluded that the patient on longstanding citalopram developed RCVS two weeks after beginning to take the weight-loss supplement Hydroxycut.

Seizure	NA

Event/Problem Narrative:

My son had 3 of Hyland's Teething Tablets. This was the first time he had the product. (b) (6) later he had what we -my husband and I- believe to have been a seizure. The "seizure episode" consisted of about 3 short -5-10 second- seizures. We took him to the Emergency Room where the doctor could neither confirm nor deny that a seizure had occurred. The doctor warned us about the possible risks involved with this product. I have since found out that the tablets contain Belladonna, a poison, and are associated with many possible side effects, including seizures. I am shocked at the popularity of this product, which is growing, and the lack of knowledge among parents, as well as the lack of warnings on the labels. I understand that this product has been recalled in the past and may not be regulated buy the FDA, but parents desperately need to be warned about this product if it is going to stay on the shelves!!!! Please do something! WALKERC: |*********| 2012-02-13-11.36.00 |*********| USFDAMWVOLUNTARY_201263_13984_20120212.xml Route To: AERS : Electronic

My son had a fever that i couldn't get him to break. It was 101.2..then he was cooing at me and then he stopped out of no where and his breathing got shallow then he was staring at me but it was as if he was staring through me. He was also very cranky and fussy. This was very unlike him. At first I thought it was from teething so I gave him hylands baby teething tablets. I just found out today that these tablets were recalled back in Oct of 2010 because of an ingredient called belladonna. I check the bottle of the teething tablets that I have been giving him and it contains the same ingredient called belladonna and it is now march of 2012. I don't know what to do with the teething tablets now. I don't want to throw them out just in case it is the reason he is having this symptoms. I would like to know what I should do. the website wouldn't let me continue until i clicked every box here and at the end. This is the first time I am contacting anyone about this. I do not mind if you tell the manufacturers my information. Event/Problem Narrative:

Cvetanovich GL, Ramakrishnan P, Klein JP, Rao VR, Ropper AH. Reversible cerebral vasoconstriction syndrome in a patient taking citalopram and Hydroxycut: A case report. J-Med-Case-Rep 2011; 5 No. 548 A 65-year-old woman developed reversible cerebral vasoconstriction syndrome (RCVS) during concomitant therapy with citalopram and Hydroxycut, a herbal weight-loss supplement. The woman, who had depression, had been receiving citalopram 20mg daily [route not stated] for several years. She presented with a sudden-onset "thunderclap" headache, accompanied by nausea, photophobia and hyperacusis. She had taken butalbital, paracetamol [acetaminophen] and caffeine, with no improvement. Intractable migraine was suspected. The woman received prednisone and lisinopril. Further investigation revealed that she had commenced the weight-loss supplement Hydroxycut [route and dosage not stated] 2 weeks earlier. Lisinopril was discontinued. On hospital day 2, she developed a left visual field deficit and weakness in both legs. An MRI demonstrated lesions in the right occipital lobe and bilateral anterior cerebral artery territories. She had a WBC count of 0 and a RBC count of 48. CT angiography (CTA) showed multifocal segmental vasoconstriction, particularly in the bilateral anterior and posterior cerebral arteries, and a diagnosis of RCVS was made. Citalopram was discontinued, and she began receiving nimodipine. Her headache resolved over the next few days, and her vision and leg weakness improved. She was advised not to take Hydroxycut and citalopram, and was discharged. At last follow-up, she had no residual leg weakness and improvement of her visual field deficit. Six weeks after discharge, a repeat CTA revealed marked resolution of cerebral vasoconstriction.

Relevant Medical History:

Sparse past history of migraines that ceased after her hysterectomy, no family history of migraine. Body mass index 22.3.

Event/Problem Narrative:

Published Literature Case Report Events: Reversible cerebral vasoconstriction syndrome, Acute infarcts in the bilateral anterior cerebral artery and in her right occipital lobe, Prednisone induced hypertension, Hypotension A 65-year-old Caucasian woman presented to her local hospital with sudden-onset, bifrontal, pounding headache described as getting hit in the head with an axe. The headache was the worst of her life and did not improve after she took acetaminophen, caffeine, and butalbital. There was hyperacusis, photophobia and nausea. Noncontrast head computed tomography (CT) and brain magnetic resonance imaging (MRI) at the time of admission were normal and she was treated with prednisone for presumed intractable migraine. Aside from a similar but milder headache one week prior to her current presentation, she reported only a sparse past history of migraines that ceased after her hysterectomy and no family history of migraines or strokes. She had hyperlipidemia treated with simvastatin 40 mg daily, lumbar spinal compression fractures, multiple miscarriages and depression that had been treated for several years with citalopram 20 mg daily. On further questioning, our patient reported taking the weight-loss supplement Hydroxycut beginning two weeks prior to her thunderclap headache. On admission, her body mass index was 22.3, and she was normotensive on lisinopril 10 mg daily. She had not previously been on lisinopril, which was presumably initiated at the outside hospital for prednisone induced hypertension. We held the lisinopril for the duration of her hospitalization given her normal to low blood pressures. Her fasting lipid panel revealed cholesterol 223 mg/dL, triglycerides 141 mg/dL, high density lipoprotein 61 mg/dL, low density lipoprotein 134 mg/dL, very low density lipoprotein 28 mg/dL and lipoprotein (a) 6 mg/dL. Two days after admission, she developed bilateral leg weakness and left-sided visual disturbances that she described as blank lines. A repeat MRI revealed areas of restricted diffusion consistent with acute infarcts in the bilateral anterior cerebral artery territories and in her right occipital lobe. The following investigations were unrevealing: hypercoagulability studies, rheumatic and vasculitic screening labs, magnetic resonance venography, transthoracic echocardiogram with bubble contrast, and Holter monitoring. LA lumbar puncture, performed while our patient was being treated with prednisone, revealed 0 white blood cells (WBC), 48 red blood cells (RBC), cerebrospinal fluid (CSF) protein 27 mg/dL, glucose 81 mg/dL and no xanthochromia. CT angiography (CTA) was obtained, which revealed multifocal segmental cerebral artery vasoconstriction, most prominent in the bilateral anterior and posterior cerebral arteries. We made the diagnosis of reversible cerebral vasoconstriction syndrome (RCVS) and began treatment with nimodipine 30 mg three times daily. Over the subsequent days, her headache resolved and her visionand leg weakness improved. Our patient s blood pressures at admission and prior to starting nimodipine were 92-116/54-58 millimeters per mercury (mmHg) on no antihypertensive medications. After beginning nimodipine for RCVS, her systolic blood pressures ranged from the high 80s to low 100s (mmHg). We administered intravenous fluid bolus as needed to

Case ID: 8555594

keep her systolic blood pressure above 90 mmHg, in an effort to balance maintaining adequate cerebral perfusion while continuing nimodipine treatment for RCVS. Our patient tolerated this well without any clinical decline or symptomatic hypotension. She was discharged on nimodipine and advised not to take Hydroxycut and citalopram, which had been discontinued when a diagnosis of RCVS was first suspected. At the time of discharge, her systolic blood pressures remained in the 90s to low 100s mmHg. Therefore, she was advised to measure her blood pressure at home and take nimodipine only if systolic blood pressure was over 100 mmHg. Following discharge, our patient experienced no headaches and no recurrence of her presenting symptoms. At a follow-up appointment, she had no residual leg weakness and significant improvement of her left visual field deficit, although she reported that her vision had not returned to her baseline. CTA performed six weeks after discharge showed marked resolution of cerebral vasoconstriction, confirming the diagnosis of RCVS. Author's Comments: RCVS is the term for a group of rare syndromes characterized by multifocal narrowing of the cerebral arteries that resolves over the course of days to weeks. Patients present with sudden, severe thunderclap headaches that may be accompanied by neurologic deficits. Clinical situations associated with the development of RCVS include pregnancy or the postpartum period and various medications and illicit drugs. RCVS is diagnosed on the basis of this clinical presentation, exclusion of other causes of thunderclap headache such as subarachnoid hemorrhage andcerebral vasculitis by cerebrospinal fluid analysis, documentation of multifocal vasoconstriction of the cerebral arteries by angiography, and of reversibility of the vasoconstriction within 12 weeks of onset, although there may be permanent neurologic injury if stroke occurs secondary to vasospasm. Treatment has included calcium channel blockers or magnesium, and discontinuation of potential triggers for RCVS, particularly adrenergic or serotonergic compounds. We report the case of a patient on longstanding citalopram who developed RCVS two weeks after beginning to take the weight-loss supplement Hydroxycut, and we review the literature identifying factors associated with development of RCVS. This case illustrates the cardinal features of RCVS: thunderclap headache, lack of subarachnoid hemorrhage by CSF and radiographic analysis, ostensible exclusion of cerebral vasculitis by CSF and systemic testing, and angiographic demonstration of multifocal segmental cerebral artery vasoconstriction that resolves with time or calcium channel blocker treatment. It also exemplifies ischemic strokes as complications of RCVS, emphasizing the delicate balance between maintenance of adequate cerebral perfusion pressure to avoid watershed infarcts while using calcium channel blockers to mitigate against worsening vasoconstriction. The other aspect of RCVS treatment is identification and discontinuation of the potential triggers of RCVS. The clinical settings for RCVS include pregnancy and the postpartum state, serotonergic and sympathomimetic drugs and tumors, direct or neurosurgical trauma, hypertension, primary headache disorders such as migraine and other miscellaneous conditions such as hypercalcemia and porphyria. Regardless of etiology, RCVS is thought to occur due to perturbation of cerebral vascular tone. Although amphetamine-related weight-loss supplements and selective serotonin reuptake inhibitors including citalopram have been associated with RCVS, Hydroxycut has not previously been implicated. It is impossible to prove causality, but the temporal relationship between the patient's initiation of Hydroxycut and development of RCVS and the rapid reversal of symptoms and vasospasm following cessation implicates the supplement as a contributing cause in this case. Citalopram may have acted in concert

Case ID: 8555594

with the newly initiated Hydroxycut to cause this patient's RCVS, though the fact that she tolerated citalopram well for several years before developing RCVS argues against the antidepressant drug as the sole trigger.

Event/Problem Narrative:

On (b) (6) upon arriving home from work at approximatley 5:45 pm I gave my son Hyland's teething tablets somewhere between that time and 8pm. The night was normal as always and he was acting as he always did. Around 8pm, after bottle feeding him, i walked away from my son for a breif moment upon returning to him quickly due to a strange sounding cry, i found him sweating...i picked him up and immediatley felt something was not right. He suddenly felt lathargic and become un responsive, he breathing had slowed drastically. He had a blank stare in his eyes. I immediatley called my mother in law to come over who lived a few blocks away and ran to my neighbors house for help in panic. She immediatley called 911. They thought he had a seizure and he was taken by ambulance to the hospital. They did ask if he had any medicine and i told him yes teething tablets, i even showed them the bottle. He ended up being ok, after running test to rule out seizues. Today his daycare was mentioning the teething tablets and how she cant find them anywhere. I mentioned to her they were recalled last year. I came into work and decided to look the tablets up to see why they were recalled and if and when they would be back. The first article i read explained why they we recalled "varying amounts of belladonna, a potentially toxis ingredient" once reading the side affects I realized they matched the exact incident we went through the same night he took these. Had i read this article sooner i would have reported! I will never recommended anyone buy this product if it goes back onto the shelf and would never purhcase again,I am just thankful my son is ok. wilsonj: |*********| 2011-08-04-08.38.01 |*********| USFDAMWVOLUNTARY_190102_4543_20110803.xml Route To: AERS : Electronic Route To: DQRS : : Paper

Event/Problem Narrative:

Our son first had a seizure close to the time that we gave him Hylands Teething Tablets. He since then off and on has had over 25 seizures. He is currently only 2 years old. We have had an EEG, EKG and soon will have an MRI. We have reported to his neurologist that we assume this relationship. We are very concerned about this being related to his seizures. His seizures are like this: He becomes very lethargic, lips start turning blue and has extreme shallow breathing. His eyes are glassy, he is over heated, he is not 'present' during the 30 second-1 minute seizures. After it is over he sleeps very hard until he has recovered.

I have used Hyland's Teething tablets periodically with my daughter for some time now. I am not sure of the exact date I bought them or how often I have given them to her; however, I have noticed that she has begun having some constipation issues for the last month or so and her facial skin has become quite flushed. I have read about the Hyland's recall and feel that she has experienced some of the adverse affects associated with the undetermined amount of belladonna in the product evidenced by the constipation and skin flushing. I want it noted that she experienced some of these issues. I am not sure if they will go away with the

discontinue of use or if these are going to be chronic issues. Quite frankly I only bought them because I thought they were safe. Had I known the FDA didn't approve of them I never would have bought them. I don't like the fact that I a able to buy something in a store in the medicine section that is not considered safe enough by the FDA to approve. I shouldn't be able to purchase things that are not safe.

We took our son to the doctor after witnessing a dramatic impairment in the use of his leg for a period of several hours, on June 12, 2008. We had witnessed two similar instances of this type of temporary paralysis about 4 and 5 months earlier that did not last quite as long. We did not seek medical attention for the first two instances as they did not last as long and we thought maybe his leg was just asleep, or had a muscle spasm. When we took him to the doctor she seemed highly concerned, especially after I modeled for her the type of dramatic immobility we had observed. She did not observe anything unusual during her examination but

suspected that it was brain or spinal cord related. She asked for time to consult with some specialists. We took him back one week later for follow-up and she did a SED rate, ordered X-rays of the leg, foot, and hip -all came back normal- and referred us to a pediatric neurologist for a next day appointment. Neurologist ordered blood work, an electrolyte panel to check for potassium deficiency, did an EKG to check for heart irregularities, and did an EEG. All tests came back normal. We opted to hold off on doing an MRI after further discussion with the neurologist. He believed our son had had three focal seizures but was unable to determine the cause. We wondered at the time of the incident if anything could have been triggered by the recent Tylenol recalls because we recalled given him Tylenol on at least two of the instances to help ease teething pain. Our doctor did not feel that the Tylenol recall was in any way linked to the symptoms we were observing. In hindsight I am now wondering if these episode were not linked rather, to the Hyland's teething tablets recall, known specifically to cause seizures among other effects. We did frequently use the tablets as directed during periods of intense teething pain and all of these episodes of seizure activity happened during intense teething periods.

On February 28th 2009 at approximately 930pm I called EMS on my Son who at the time was 17 months old. He had been seeming tired most the day, and not himself. Around 930pm he became very lathargic, white or flushed in the face, unresponsive & completely limp. He didnt snap out of this for approx 20 minutes. When EMS arrived to our home they didn't notice anything serious enough to have him taken in because he eventually was able to stand up, walk around, and they assumed he had a short fainting spell from a viral illness. He remained tired the next day, much more than usual but didn't have another limp, lathargic, unresponsive spell until

B5. Describe event or problem continued

(b) (6) - (b) (6) days after our initial call into EMS. It was the same symptoms as (b) (6) nights before. I rushed him into (b) (6) Hospital where they began running a battery of tests, hooked him up to an IV and began administering fluids. He was found to be dehydrated slightly and was transported via Ambulance to (b) (6) Childrens Hospital for further testing based on my observations the past few days. Once admitted into Childrens Hospital he experienced 1 additional limp spell, remained very lathargic and experienced trouble walking. We remained in the Hospital for 4 additional days and finally released without any answers. He was seen by Cardiologists, Neurologists, and Pediatrians whose tests all came back normal to rule out heart, brain, or bacterial infections. It was assumed all of these disturbing symptoms were from a Viral Illness which ran it's course. I followed up with our Pediatrician for the 2nd time on this issue and he advised it could also have been night terrors. Today, October 25th 2010 we saw the Recall on Teething Tablets. The exact Teething Tablets I've gave my Son. We are very surprised & disturbed to read the symptoms of Belladonna poisoning are the exact symptoms my Son displayed, All of these symptoms were communicated & documented before, during & after our Stay in the Hospital in (b) (6) My son WAS taking these exact Teething Tablets at this time included in the Recall! We still have the Bottle. He has not taken them since that time.

I gave my son 2 Hyland's teething tablets before bed, and a couple hours later he woke up crying. I got him out of bed and he was jerking his head/arms, staring blankly, couldn't stand -he knows how to walk-, and just not being himself. I thought it was from Motrin earlier that day, but after I read the effects of this product on the recall website, I am positive this is what caused my son to have this reaction. I kept him up and gave him water, and then put him back down to bed. He was better in the morning, but that night was pretty scary. I was very close to taking him the hospital, but my husband was out of town and I had nobody to

5. Describe Event, Problem or Product Use Error

I bought a bottle of Hylands Teething Tablets 2 weeks ago and was giving them to my son. The entire time he was taking them he was extremely fussy and sometimes beyond fussy. I thought this was because of him teething. Then on 10/22/2010 my son was screaming seeming to be in pain and unconsolable, he then broke out in a rash on his face and neck. After a little while the rash went away and he calmed down. This morning I saw that Hylands Teething Tablets had been recalled for inconstant amounts of belladonna. My son had many of the side effects listed on the recall page so I took him to the emergency room. A doctor confirmed that his behavior

5. Describe Event, Problem or Product Use Error

I used the Hylands Teething Tablets for my son towards the end of August -the 25th is not an exact date- and he had problems with them. They instruction said to use 2-3 tablets 4 times per day. Well, he'd never had them before so I only gave him one tablet to start. He did go straight to sleep, but woke up SCREAMING! It wasn't a regular scream, it was like he was in terrible pain. I have a very relaxed and happy baby and for him to scream like that was very terrifying because that's not something he does - ever! I didn't associate the tablets with the screaming at first. So, a few days later, he had one more tablet. This time, about two

minutes after taking the tablet, he started vomiting. He threw up very hard and there was a large amount of vomit. He stomach stayed upset for a few hours after as well. Once again, I didn't really associate the tablets to the vomiting. So once again, a few days later, he one more tablet. Then, in less time than before, he started throwing up again and became very irritated. That's when I made the connection to the tablets. He only had three tablets total and on three different days, but every single time he had a reaction and became irritable and seemed to be in pain.

While our daughter was teething, we were giving her the Hyland's Teething tablets. On (b) (6) she experienced a seizure lasting two to three minutes which she came out of on her own. She was transported to the ER and treated. She had a fever of approximately 101 degrees at the ER. While the fever was not high, the seizure has been attributed to the fever. She was seen the following week by a pediatric neurologist. The neurologist also attributed the seizure to fever.

5. Describe Event, Problem or Product Use Error

My 9 month old daughter has been taking Hylands Tething Tablets in reccommended dosages as indicated on the bottle. She has been showing some of the symptoms that have been published. She was admitted into the hospital for a "cold" because the medicine that was prscribed to her was not being accepted by her body.. The symptoms that are showing is the breathing difficulties, excessive sweating, fatigue, and sleeping too much. She has been released from the hospital, but she still is haveing the symptoms. She is taking albuterol, and pulmacort through a nebulizer and liquid prednizone. The (b) (6) Poison Control Center has been

5. Describe Event, Problem or Product Use Error

I gave my daughter 2 Hylands Teething Tablets. She started going limp, her eyes rolled back in her head and she became unresponsive. -No jerking as a seizure would indicate.- I called the doctor who instructed me to call 911. 911 called Poison Control and instructed me to take her to the closest hospital. She remained comatose & limp and barely breathing. The ER doctor did a few tests on her and my daughter started to come around. I told the ER doctor about the Tablets and he was unsure whether they would cause this. All information is documented in the ER report. We visited her normal pediatrician later that day. He took the bottle and

5. Describe Event, Problem or Product Use Error

Just received news that Hyland's Teething Tablets have been recalled. After giving my son the suggested dosage by the manufacturer, I noticed he's somewhat "out of it" if the 3 tablets were given to him during the day, or he almots immediately goes to sleep afterwards. I am presently unaware of any long-term damage done to my son's body, as we have been using these since he was about 9 month old.

After using the teething tablets religiously for 3 days -every 2 hours when needed, not exceeding 12 tablets in 24 hours- on (b) (6) while playing with my daughter on the bed she suddenly lost all color in her face and her lips turned blue. She didn't choke, and showed no other signs of distress. She actually laughed through the whole thing. We rushed her into the ER where she was put through a battery of tests and an overnight stay they were unable to find anything wrong other then her O2 stats dropping at random, which resolved itself after a few hours. Durring the 20 hours we spent at (b) (6) I had to hold my baby girls arms above

her head while the strapped her into a tube used to prevent her from moving while they took x-rays, I had to hold her down while they tood blood and inserted an IV, and I had to hold her still while they did an EKG. Life flight was waiting to take her to (b) (6) if they found a heart defect. Through out all of these tests my sweet baby girl cried and screamed and the top of her lungs, looking at me holding her down letting these people hurt her. She spent the night hooked up to a telemetry monitor and an O2 monitor, there were 6 wires attached to my baby. The only test that wasn't done was a tox screen because they didn't believe it to be necessary. The only thing she had consumed in the 72 hours prior were breast milk and the teething tablets. My pediatrician believes the teething tablets are likely to be the cause of the hell we've went through the last 2 days.

A. PATIENT INFORMATION

1. Patient Identifier	2. Age at Time of Event, or Date of Birth:	3. Sex	4. Weight
(b) (6) In confidence	(b) (6) 5 Months	☐ Female ☑ Male	22 lb or ____ kg

B. ADVERSE EVENT, PRODUCT PROBLEM OR ERROR

Check all that apply:

1. ☐ Adverse Event ☑ Product Problem *(e.g., defects/malfunctions)*
   ☐ Product Use Error ☐ Problem with Different Manufacturer of Same Medicine

2. Outcomes Attributed to Adverse Event *(Check all that apply)*
   ☐ Death: ____ *(mm/dd/yyyy)*
   ☐ Disability or Permanent Damage
   ☐ Life-threatening
   ☐ Congenital Anomaly/Birth Defect
   ☐ Hospitalization - initial or prolonged
   ☑ Other Serious (Important Medical Events)
   ☐ Required Intervention to Prevent Permanent Impairment/Damage (Devices)

3. Date of Event *(mm/dd/yyyy)*	4. Date of this Report *(mm/dd/yyyy)*
10/16/2010	10/25/2010

5. Describe Event, Problem or Product Use Error

My baby was crying constantly and couldn't use the bathroom -poop-, he was straining and would cry, he would not take bottle or have anything to do with any type of food, was having problems urintaing and when he did it was really strong in odor. We took him to the emergancy room where he was diagnosed as being constipated, we just found out about this recall today and he had been taking these teething tablets since the middle of September. We just gave them to him again today and then my mom called about the recall of this product.

5. Describe Event, Problem or Product Use Error

Hyland's Teething Tablets were used for the first time the evening of (b) (6) We used 2 tablets at 4pm, and 2 tablets at 9pm. Our 13 month old daughter did not wake up (b) (6) (b) (6) She was extremely lethargic. She was rushed to the emergency department. Her drug screen was negative. Her alcohol level was negative. Her ketones were 4+. Her blood sugar was 31. She had no underlying illnesses. She was transported to a PICU for 24 hours for observation. All of her tests came back negative. The only thing they could think of was that the levels of belladonna in the teething tablets caused extreme lethargy and sedation or

After using this product we've noticed numerous of the side effects that were described. He has had breathing problems, skin flushing/rash, lathargy, agitation, and constipation. We have been trying to figure out what has been causing these issues but nothing has seemed to work. Until running across this recall we now realize that all the issues have been caused by the teething tablets. We will no longer be using this product and will not purchase this brand in the future!

The infant was exhibiting symptoms of teething and Hyland's teething tablets were administered. The infant appeared relieved of symptoms, so the tablets were continued for several days. After a few days the infant began waking several times in the night, screaming inconsolably. After a few nights of the recurring episodes. The teething tablets were stopped. The episodes immediately stopped. This was discussed with the child's pediatrician. All other causes were ruled out. Additionally, the child became drowsy after tablets were administered but the manufacturer states that drowsiness is to be expected because the teething symptoms have been

01/04/2010	10/25/2010

5. Describe Event, Problem or Product Use Error

My daughter ended up in the ER, because she collapsed at my parents house while I was st work. My parents said she was playing with a toy and all of a sudden she collapsed. My dad picked her up and screamed for my mom. When my mom took her, she said her eyes rooled to the back of her head and her lips were blue. They called 911 and when the paramedics came, they treated it as a seizure. No fever.. nothing. She was and is a healthy 22 month old now, but we had been giving her the hylands teething tablets, but never would have thhought this might have been the reason for this.

5. Describe Event, Problem or Product Use Error

I have been giving my daughter Hyland's Teething tablets and had to discontinue use due to GI issues. I gave her less than the recommended dose and the fussiness only got worse. She began arching her back and screaming in pain. I called the peditrician and they said to ride it out. I am infuriated with Hyland because on the bottle it states, "your baby may fall asleep after using this product because the pain has been relieved and your child can rest," and yes my child did fall asleep, I'm just glad she woke up!! How can they print on the bottle, "no side affects," when you look up belladonna there are many side affects????

More

6. Relevant Tests/Laboratory Data, Including Dates

N/a thankfully our side affect wasn't that serious.

03/01/2010	10/27/2010

5. Describe Event, Problem or Product Use Error

NOTE that date of event is approximate. He found a bottle of Hyland's Teething Tablets, which do not have child-proof caps. I believe that the bottle originally contained 100 tablets; however, it could have been 50 tablets. My calculation at the time -when I called poison control- was that there were approximately 30-35 tablets remaining in the bottle. The two year old was able to remove the cap, and ate an unknown quantity, estimated to be about 20-25 tablets. At the time -before the recall-, poison control stated that since the amount belladonna in the tablets is controlled, even eating an entire bottle should not have affected

him -and we knew the bottle was partially empty-. We were advised to watch for certain symptoms, and call the doctor if we noticed them, but we did not. He had no adverse effects in the short term or the long term. I can recall at least one other incident where he was able to open the bottle, but luckily the second time I turned around and saw him climbing to get it and I made it across the room as he got the cap off, before he could eat any of the tablets. I was motivated to submit this report upon hearing of the recent recall of Hyland's tablets. I hope that this submission is considered along with the others, to motivate the FDA to require that ALL medical products, prescription, OTC, homeopathic, or otherwise -even vitamins- be REQUIRED to have child-proof caps.

My child had 3 seizures, lethargthic, and very sleepy. We had to take her to the hospital 2 times before she was admitted. She did have and ear infection and RSV but the doctor was not sure why she had the seizures, so they said they were feviral seizures. I happen to be giving her the teething tablets. So now I am wondering if they may have been the cause.

Hyland Teething pills. I thought they were taken off the market years ago. I just see that they are going to be taken off. My son was 6 1/2 months old. I had given him a teeting pill at 10 AM. We went out to the zoo and noticed pumps on the back of his neck . My 12:30 PM, he had a big rash all over his body- everywhere. I called the pediatrician. Brought him in at 1:30 Pm and the pediatrician screamed at me after he saw the Hylands bottle and saw that the ingredient was Bella Donna. He said my son could have gone into cardiac arrrest and died. Instead, he had a severe rash and was fine. I called the Hyland's company and spoke with a

she said it may be roseola or a reaction to medicine. that same night i learned of this recall just two hours after giving this medicine to my child. i feel that this medicine was what caused my child to be sick and have a seizure out of nowhere. she was fine until she started taking this medicine and the doctors didnt even really know what was going on with her they just kept guessing at what they thought might be wrong with her. she had the same symptoms as the ones listed as possible side effects to this drug -hyland's teething tablets-.

5. Describe Event, Problem or Product Use Error

Our family went on a vacation to (b) (6) our daughter was teething at the time. We gave her the hylands teething tablets to ease her discomfort. Later on, she was very sick. She wasn't even able to lift her head- she slept all day in my arms, that afternoon she had a temperature of 103.1 so we took her into the (b) (6) Childrens Hospital. They ran some tests and couldnt figure out why she was having such a high fever- it had spiked up again during her hospital stay. After all the testing was done, they never figured out what was wrong with her. We were told to help bring the fever down with motrin and went back home. She was very lethargic

5. Describe Event, Problem or Product Use Error

I have been giving my baby who is 9 months old Hylands teething tablets. For about 2 days he was getting 2 tablets about 3 times a day. I noticed on October 23, 2010 he was breathing different, it sounded like he was having a hard time breathing. Also when i fed him he couldn't swollow the food he normally had no troubles eating. It was stage 3 gerber baby food. He would choke on it and throw up. It was like he had something stuck in his throat. He had also been very sleepy, I would describe it as "out of it" for the same 2 days. No signs of any illness, besides a runny nose. no coughing, no diarrhea, no throwing up.

B5. Describe event or problem continued

(b) (6) (b) (6) I knew i needed to get him to a hospital. When we got there they brought him back ahead of others since he was so little and having breathing problems. The doctors and nurses checked him completely out and did x-rays and saw nothing wrong with him. Today, two days later. I see the recall from the FDA about Hylands Teething Tablets and i see he had a lot of the same symptoms. I didn't even mention to the nurses he had been taking them because they are all natural and it didn't even cross my mind that they would make him sick. I do not have any proof these teethign tablets made my baby have these symptoms but it is very similar to the symptoms listed under the recall information.

For the past month and a half, my son has had a strange rash all over his upper body and facial area. I've taken him to see his doctor a few times and we have not been able to come up with a conclusion as to why he has this rash. He has flushed cheeks, and seems agitated quite often. He has also been taking Hylands teething tablet for the past month and a half. I did some research on Belladonna and this can be an effect from it. I have immediately stopped using this product.

5. Describe Event, Problem or Product Use Error

My son is 15 months old now. He has been teething since he was 8 months old, and I have been giving him Hylands Teething tablets ever since he started teething. Starting on September 5th, My son began cutting 2 teeth, i gave him CONTNUOUS doses as recommended of the teething tablets to help with the pain. On (b) (6) my son woke up at 9:30pm with a fever over 105 degrees. I rushed him to the hospital. He was subjected to chest Xray, IV's, Blood draws, Catherization, and the worst, a spinal tap. They could not find the source of the fever. It caused his skin to be flushed, vomitting, lethargy, the high fever, shaking, irritability,

More

6. Relevant Tests/Laboratory Data, Including Dates

Chest Xray, bloodwork, spinal tap, urinealysis, all taken during hospital stay from (b) (6) thru (b) (6) No results were found, they did not do a toxicology including Belladonna.

More

7. Other Relevant History, Including Preexisting Medical Conditions *(e.g., allergies, race, pregnancy, smoking and alcohol use, liver/kidney problems, etc.)*

He has NO pre existing conditions. No smoking, etc. He is 15 month old white male. No liver/kidney or any other health problems.

B5. Describe event or problem continued

constipation etc. The doctor couldn't find any cause for the fever. He was released 3 days later with the diagnoses, FEVER WITH UNKNOWN ORIGIN. He cut 2 teeth. NOW, he is teething again...and last week I started using the tablets again. Starting on Wednesday, he was fussy, irritable, constipated, had a fever, and had NO appetite. I gave it until Friday, and took him to the Doctor who could not find anything wrong with him. Just instructed to give Tylenol. I continue to do that, off brand, of course, since Tylenol is recalled...but, until right now, I have continued to give him the teething tablets. He has ALL of the same symptoms that he did prior to his hospitalization, except for the extreme fever.

When given just 2 tablets, he would fall asleep within 5 minutes and sleep very hard. I never gave him more than 2 tablets at a time and never more than 2 doses a day because he would sleep so hard after having them. I wasn't too worried at the time because the bottle states that 'child may fall asleep due to the relief of discomfort'. But I felt I needed to be cautious with the product because it would change his normal sleep pattern.

5. Describe Event, Problem or Product Use Error

Product Use Error - On Monday, September 6, 2010 I walked into my 23 month olds bedroom to find her with an open bottle of Hyland's Teething Tablets eating the pills. She had opened a dresser drawer, opened the non-child proofed bottle, and started eating tablets. Best guess is she ate b/w 10-15 at that time. She appeared to have no side effects after ingestion. Since that date she has probably only ingested 5-6 additional tablets. Out of our most recent bottle of 125 there are still 98 tablets. Possible Adverse Event - Two year old girl had a seizure on (b) (6) at approximately 10:00pm. After being rushed to the ER, and

performing blood and urine analysis, CT Scan, EEG of Heart, and chest x-ray no cause for the seizure was found. In the past 2-3 months, she has probably ingested 27 Hyland Teething Tablets. Last two tablets were probably given to her two weeks ago. Probably since March-April 2010 she has ingested about 100 Hyland Teething Tablets. We did speak to a nurse at our Pediatrician's office and she did not think their was a correlation between the seizure and the tablets, but she suggested to contact you. We do have an appointment with a Pediatric Neurologist on Friday, October 29, 2010 to further evaluate our daughter after her seizure.

I had given my daughter teething pills hylands homopathic pills. I had giver her six through the day and it made her very cranky n irritable n shaking her head!! I didn't know it had to do with the pills I thought she was comming down with a ear infection! She was up all day n night with sleeping maybe 15 mins at a time! the following day she was acting like her self again !! I didn't bother giving her any of the teething pills!!!!! She was constipated for 3 days !!!! I don;t know if that has to do with any of it !!!

Constipation that led to the development of perianal fistula requiring surgical intervention. Second fistula developed -2 weeks before recall announced- & cleared with antibiotics & some invasive treatment, but non-surgical. No further fistulas developed when administration of Hylands teething tablets ceased. Last time Hylands teething tablets were administered was on Saturday, 10/23. 1 episode of severe constipation noted on Tuesday, 10/26. Since Tuesday, there have been no more episodes of severe constipation & Hylands Tablets have been completely discontinued with last dose administered on Saturday 10/23 as noted above.

I gave my child Hylands Teething Tablets: - 2 pills at 5:30pm on 10/27/2010 She woke up with a fever and was very agitated I gave her: - 3 pills at 7:30am on 10/28/2010 She was very drowsy and would not eat rice cereal. I took her to our pediatrician and she had a 100.1 temperature and a red throat. We thought she had a cold in addition to her teething. She woke up without a fever on 10/29/2010 and seems back to her normal self.

I had using this product Hyland's Teething Tablets, 125 Tablets UPC# 3 54973 75041 on my daughter since she was 6 months when she first started teething. I thought it was a real good medicine a lot of people had recommended it so I decided to get it. It work real good but then my daughter started having seizures and we are still no able to find out the problem so I'm just wondering if maybe this medicine is what was causing her to have them. I had heard the recall Wednesday which was 10/27/10. The last time I had gave my daughter this medicine was two weeks ago around 10/12/10 thru 10/17/10 the last seizure she has had was 10/20/10. Since I

haven't gave her the medicine she hasn't had a seizure. I had called her doctor that she sees for her seizures and they told me that their not going to do anything until her next appt. but that is 3 months away from now. How are they going to find anything then if it is going to be out of her system by then. Is there are any that you can escalate this problem so I can figure out if this medicine was the cause of my baby's seizures. Please help asap. Thank you

Child was crying and uncomfortable and given then Hyland Teething Tablets as well as acetaminophen in the morning. She exhibited lethargy, rapid breathing and increased heart rate and was taking to the emergency room where she stayed for monitoring for several hours. She has several nebulizer treatments, chest X-ray, and other tests to rule out other difficulties. She had not exhibited difficulties prior to this event or had any difficulty breathing. She was using accessory muscles in her stomach to breathe and breathing seemed to take a lot of effort for her. Nebulizer treatments continued for several days after afterwards.

5. Describe Event, Problem or Product Use Error

On (b) (6) my son of six months had 10 episodes in a total of five minutes. Each lasted from 3-5 seconds long. These episodes were determined to be some kind of seizures. Immediately after they happened, we took my son to the emergency room where they performed a cat scan, blood tests, and urine tests. The only abnormality they found was a slight increased level of an enzyme in the blood that is released when the muscles have become very tense. The doctors in the er couldn't figure out what caused the seizures so we meet with a pediatric neurologist and had 2 eegs done. The first came out very abnormal , but only when they flashed

the lights. The second showed only a few abnormalties. We are scheduled for an mri because the tests where inconclusive, and we still haven't figured out what caused the seizures. We did recently hear of the Hylands teething tablets recall. Our bottle is on the recall list. My son first took these tablets on August 23, 2010. We gave them to him as needed until early October. Whenever we gave them to him, we gave him to tablets every four hours. We are not sure if the tablets are what caused the episodes, but we were told to report it anyways. We have not noticed any damage caused by the seizures, and he has not had the tablets since early October. I didn't mention the tablets to the doctor at the time because I was not aware of any adverse effects. The seizures were also a singular event, and we have not noticed anything related to them since that day. They can be described as a tightening of his whole body, with an arching of the back. His jaw clenched the right side and he seemed to be in a trance. After a couple seconds he would go back to normal, and then it would happen again. After it happened about ten times in a five minute time span, he just stared in the distance and would not respond to me. That lasted about thirty seconds. After all of this, he was acting the same as always.

VOLUNTARY reporting of events, product problems and product use errors

Submission - Page 1 of 1

Adverse Event Reporting Program

FDA USE ONLY
Triage unit sequence # 434770

A. PATIENT INFORMATION

1. Patient Identifier	2. Age at Time of Event, or Date of Birth:	3. Sex	4. Weight
(b) (6) In confidence	(b) (6) 14 Months	☑ Female ☐ Male	18 lb or ____ kg

B. ADVERSE EVENT, PRODUCT PROBLEM OR ERROR

Check all that apply:

1. ☑ Adverse Event ☑ Product Problem *(e.g., defects/malfunctions)*
   ☐ Product Use Error ☐ Problem with Different Manufacturer of Same Medicine

2. Outcomes Attributed to Adverse Event *(Check all that apply)*
   ☐ Death: ____ *(mm/dd/yyyy)* ☐ Disability or Permanent Damage
   ☑ Life-threatening ☐ Congenital Anomaly/Birth Defect
   ☐ Hospitalization - initial or prolonged ☑ Other Serious (Important Medical Events)
   ☐ Required Intervention to Prevent Permanent Impairment/Damage (Devices)

3. Date of Event *(mm/dd/yyyy)*	4. Date of this Report *(mm/dd/yyyy)*
08/01/2010	11/03/2010

5. Describe Event, Problem or Product Use Error

In (b) (6) my daughter had a seizure, lost consiousness & stopped breathing about 30 after I gave her 3 Hyland's Teething Tablets. She had to receive mouth-to-mouth CPR to resume breathing & was Brought to the hospital.

5. Describe Event, Problem or Product Use Error

My son has used hylands teething tablets between the ages 3-6 months old. He has always been excessivley sleepy afterwards. He also has had spells of lethargy. I thought this to be normal because on the bottle it stated that the child may fall asleep afterward due to the relief of symptoms. However, since around 10/15/2010 he has had an increase in these symptoms. He also has had constipation and a significant decrease in urination since about 10/30/2010. I will be taking him to his pediatrition ASAP.

5. Describe Event, Problem or Product Use Error

My daughter is 5 months old and teething. I gave her Hylands teething tablets starting on the 20th of October. The 23 she started having seizures. They would be every two minutes sometimes and she would become very out of it. She quit playing and giggling and rolling over. I took her to the doctor right away of course and stopped giving her any kind of meds. The teething tablets were recalled due to high amounts of belladonna. Belladonna causes seizures and my doctor and I both believe this is what was wrong with my daughter. As soon as I quit giving them to her they have stopped. She is back to being her happy self as far as i can tell. the

5. Describe Event, Problem or Product Use Error

The Hyland's Teething Tablets were given to us as a baby shower gift in June 2010. We started using them on our 3 month old daughter about two weeks ago because we wanted to relieve her teething pain. We have only ever given her 1 tablet per 24 hours. After the first tablet, we noticed that she fell asleep immideately. The box containing the product says "Please note: If your baby has been crying or very upset, your baby may fall asleep after using this product because the pain has been relieved and your child can rest." So naturally I assumed she fell asleep because she was tired from the pain. After using the product for two weeks and

Due to the frequent use of you Hyland's teething tablets my child has started experiencing seizures, difficultly breathing,lethargy,excessive sleepiness, muscle weakness,and agiation. He has been hospitalized several times since the use of your product. He has to stay on an sleep apnea machine and be on two different medications twice a day. We did not know they were what was causing them so we continued to give them to him until they were recalled. Then we came to find out the reason for his medical status was due to the belladonna posioning.

I have been giving my child Hyland's Homeopathic teething tablets since she was about 9 months old. She is now 23 months old. She has had problems with her stomach, mainly constipation, nearly the entire length of her short life. I believe that these so called homeopathic teething tablets were the cause of her numerous trips to the doctor's office and emergency room. Something should really be done about this. I mean they are administering a deadly chemical to BABIES and there's not a lawsuit or anything. Is the Company restricted from prodeucing more of the tablets? Why can I stil find these tablets at my local drug store?

5. Describe Event, Problem or Product Use Error

I have been using hylands teething tablets since my daughter started teething at 3 months. After her first 4 teeth came in I did not need to use it any more. She has had problems with constipation since she has been using them. I've had to give her suppositories on a regular basis. I did not make the connection until I needed to give them again. Her constipation immediately returned. When she is constipated she needs help passing a bowel movement due to the diameter of the stool. She also was having a lot of abdominal discomfort and was difficult to sooth because of this issue.

More

6. Relevant Tests/Laboratory Data, Including Dates

We have discussed constipation with our doctor at almost every well baby visit. We also had an additional visit just about constipation.

More

7. Other Relevant History, Including Preexisting Medical Conditions *(e.g., allergies, race, pregnancy, smoking and alcohol use, liver/kidney problems, etc.)*

No other health problems.

(b) (6) was taking Teething Tablets made my Hyland for the last month and a half. She started taking them at the end of September. We continued to give them to her. She started acting really Funny, not her normal self, Started getting really agitated she didnt want nothing touching her. She started getting Dry skin around her face and started flushing of the skin. Then around (b) (6) she had a seizure. She has not yet been tested for sure, But they doctors think that is what she had. She Continued to take the tablets as needed. When her teeth would bother her. Well last week 11/17/2010 i found out there was a recall to the medication. I then

B5. Describe event or problem continued

Stopped giving them to her all together Found out meds had belladonna in them. After, stopping tablets she then got a little cold. Well i told my husband to take her to the doctor today 11/25/2010 while i was at work. He called me and let me know she had to get blood work done because her liver was swollen. We are still waiting for the results of the blood test. But, I just wanted to warn everyone if this is the case. That her liver is swollen.

assumed she was choking and performed infant choking rescue procedure on her, but she was still unconscious. (b) (6) was still not breathing at this point and her face had turned blue. My wife was unable to resuscitate her for a period of around two minutes, while on the phone with the 911 operators. About two minutes after the convulsion and seizure started, (b) (6) regained consciousness and started breathing again. The paramedics arrived shortly after (b) (6) regained consciousness. We rushed (b) (6) to the Emergency Room at (b) (6) Children™s Hospital in (b) (6) The Children™s Hospital immediately began testing (b) (6) in an attempt to determine the cause of seizure. We spent two days in the hospital and (b) (6) underwent a Computer Tomography Scan, an electroencephalography -EEG-, an electrocardiography -fiEKGfl-, and other tests to determine the cause of the seizure. All of the test results indicated that (b) (6) was perfectly healthy. Additionally, it was determined that (b) (6) did not have a high temperature or fever at the time of the episode. In the second day at the hospital my wife learned that the Hyland™s Teething Tablets had been recalled on October 25, 2010. The UPC code of the bottle from which (b) (6) received tablets, UPC 54973-7504-1, matched the UPC code list provided by the Hyland recall notice. We informed the pediatric physician for (b) (6) Dr. (b) (6) of the recall on the teething tablets on the second day in the hospital. Dr. (b) (6) stated that she was fairly confident teething tablets were the cause of (b) (6) episode and release (b) (6) from the hospital.

On 8/25/10, I bought a new bottle of Hyland's teething tablets, that is part of the recent recall, Hyland™s Teething Tablets, 125 tablets, UPC # 3 54973 75041. I normally would only give my daughter 3 tablets in the evening before bed, but the week of 8/29/10-9/3/10, I gave her 3 tablets during the day and 3 at night. She was teething really badly that week. My daughter woke up with bruises she gave herself in the middle of the night the morning of 9/1/10 and the morning of 9/2/10, the morning of 9/3/10, I saw her sleep walking/running in her crib in a sleep state as she did not notice me come in the room. She stopped at the end of the

5. Describe Event or Problem

Consumer's pediatrician reported the following as conveyed by mother:
Within a few minutes of oral application by mother to the child's mouth, the child reportedly had a single seizure, lasting approximately two minutes. The child was taken to the hospital. Upon examination by hospital staff, no specific findings were evident; no therapy was administered. The pediatrician believes the adverse event was related to the use of a teething product; however she did not have the actual product that was used and referred to the product as "Baby Orajel".

Drug Facts

Active Ingredient — **Purpose**

Benzocaine 7.5% ..... Oral pain reliever

Use for the temporary relief of sore gums due to teething in infants and children 4 months of age and older

Warnings

Allergy alert: do not use this product if your baby has a history of allergy to local anesthetics such as procaine, butacaine, benzocaine or other "caine" anesthetics

Do not use ■ more than directed ■ for more than 7 days unless told to do so by a dentist or doctor

When using this product ■ fever and nasal congestion are not symptoms of teething and may indicate the presence of infection. If these symptoms do not go away, advise your dentist or doctor.

Stop use and ask a dentist or doctor if ■ sore mouth symptoms do not get better in 7 days ■ irritation, pain or redness does not go away ■ swelling, rash or fever develops

Keep out of reach of children. In case of overdose or allergic reaction, get medical help or contact a Poison Control Center right away.

Directions ■ wash hands ■ cut open tip of tube on score mark ■ use your fingertip or cotton applicator to apply a small pea-size amount of Baby Orajel ■ apply to the affected area up to four times daily or as directed by a dentist or doctor ■ for infants under 4 months of age, ask a dentist or doctor

Other information do not use if tube tip is cut prior to opening

Inactive Ingredients ammonium glycyrrhizate, FD&C red no. 40, flavor, glycerin, polyethylene glycol, purified water, sodium saccharin, sorbic acid, sorbitol

When my daughter first was given the Hyland's teething tablets, we were giving her 2-3 4 times a day, I have given them to her every time her teething has bothered her thinking everything would be okay. When we initially gave her these tablets, 2 days later she was having extreme dryness in her vaginal area and major trouble with urinating, she screamed every time she peed and gyrated that area all the time, major muscle weakness, very lethargic and weak. Some vision issues.She was having trouble trying to walk because her legs and arms would shake so bad, as well as never could crawl because her arms weren't strong enough. We stopped for

awhile and all the symptoms went away, so I figured maybe it was just her being a baby, but recently in the last 3 months of reintroducing the teething tablets, it all came back and worse this time around. Since we have stopped the tablets from the recall, which I have reported all the events to my pediatrician and he said to stop it immediately and that there shouldn't be permanent side effects, she is now urinating wayyyyy more and normally, the dryness is subsiding and she is finally getting some moisture in the vaginal area, she isn't shaking anymore and her muscles are getting stronger. In 2 days of stopping the tablets, she is scooting way fast now and is now crawling, which she never could, she is getting up on her own and is almost walking by herself -steadily-! For her agitation, that is something that is going to take time the pediatrician said, but she isn't hitting and kicking me, acting out and snapping at everything as much as she was. She isn't really throwing anything now, just doing more normal baby dropping now thank goodness.

Was not aware of recall on the Hylands Teething Tablets -125 count- and had been giving to my 9 month old infant for approx. 3 days for teething symptoms. On the third day in the morning -after a good nights sleep- baby was lethargic and sleeping most of morning. Went online to see what could be causing this -thinking it was flu/or cold related- and came across the recall information. Called Poison Control who instructed me to take her to the pediatrician ASAP. Pediatrician confirmed Drug Toxicity. All symptoms included: eye dilation, decreased urinary output, lethargy, increased heart rate. Baby recovered from all symptoms withing

5. Describe Event, Problem or Product Use Error

I gave my daughter Hyland's teething tablets -less then the recommended dose- because she was starting to teeth. She had been crying for hours and I didn't want to give her any "real" medicine so I thought natural was best. Immediately after I gave them to her she started acting like she was drunk. After a few minutes of that, she just fell asleep. Just like that, just fell asleep. And FYI, she is one of those babies that must be rocked to sleep for at least 15 minutes before she will even try to go to sleep.

11/10/2010	12/11/2010

5. Describe Event, Problem or Product Use Error

My daughter started teething at 2 months old I began using Hylands homeopathic teething tablets when she turned 5 months old. She has suffered sever constipation, redness and flushing of her skin, constant agitation, and difficulty breathing since the start of the use of this product. I found out today December 11th 2010 that the FDA found these tablets dangerous and the company voluntarily recalled them. I have stopped use and will be taking my daughter to her Dr. to be evaluated. I also need to be sure that these symptoms have not caused permanent damage to her colon and that these symptoms will end with the discontinuation of the product.

More

5. Describe Event, Problem or Product Use Error

we gave our son Hyland brand Teething Tablets for a period of 3 months starting early in october of 2010. Immediately we saw the negative side effects of unregulated amounts of 'Belladonna'. We were not aware of the cause at the time. I had to frequently watch my son sleep because he would breathe so shallowly and then stop for a few seconds, sometimes 10-12 seconds until I physicaly touched him or shook him slightly. He would then GASP for air and cry a second, and go back to sucking on his pacifier. He would breathe normally for 3-10 minutes, then slip back into the shallow breathing.. So Many nites were spent watching and not sleeping.

B5. Describe event or problem continued

Also, at times when we would administer the tablets at different times of the day, he would many times fall asleep after we gave him 2 tablets.. We thought at that time - 'what a great product'. During one period of intense teething, he developed a weird rash or flushing of his neck and a little on his body and mouth area. We brought him to his pediatrician and they didn't really know what it was... and just said that it was normal from time to time, and could be caused by a number of things..

5. Describe Event, Problem or Product Use Error

We have yet to stop wondering what led to the early demise of our son, (b) (6) earlier this year (b) (6) The morning that he was sent to Children Hospital via care flight, it became apparent that he was neurologically impaired. Indeed, the certificate of death indicated cardiovascular collapse of unknown etiology. Recently, I read this FDA notification that a seemingly harmless supplement that our son had taken several times within 24 hours -and for a couple months prior- of his collapse was recalled due to dosage variations of the main ingredient, belladonna, AKA Deadly nightshade. He showed most of the symptoms listed

on the FDA website including frequent seizures even while on life support. The very product that we used, Hylands belladonna for teething, was the one recalled for potentially toxic levels of belladonna. We have learned that belladonna is a potent neurotoxin and fear that is autonomic nervous system may have terminated following large does of this product. The Medical examiner said that the half life of various alkaloids in belladonna is so short that his 3 day hospital stay would have flushed it from his tissue long before being taken off of life support and the subsequent autopsy. I would like actual citation of other children harmed - even to the point of death - from this product. Please help us... Respectfully, (b) (6)

My oldest Daughter died (b) (6) Her cause of death was undetermined but I believe that Hylands Teething tablets caused an adverse reaction and she died from it. I woke her up at 8:30 that morning and she was acting oddly lethargic. She just seemed like she needed more sleep. She didn't even want to finish breakfast. It was out of character for her not to want to eat or play but when she kept trying to fall asleep on the floor I put her back into her bed and allowed her to sleep. When I went back upstairs to wake her up because it had been a long time, I found her unresponsive and with no pulse. I called 911 and they couldn't resuscitate.

03/15/2010	12/16/2010

5. Describe Event, Problem or Product Use Error

Hello, I was giving my son the Hylands teething tablets back in march when he suddenly went into an episode of metahemaglobanemia. He was 7 months old. We rushed him to the ER and the doctor could not figure out what may have caused this to happen. Maybe the Teething tablets were the cause. I just though that maybe you wanted to know about this. Since that incident I have never given them to him again, and we have never had another episode. Thank you Sincerely, (b) (6) USAF military overseas.

5. Describe Event, Problem or Product Use Error

At 3pm on (b) (6) I put my 11 1/2 month old daughter down for a nap in her crib. She seemed warm, despite not having any other symptoms, so I checked her temperature and saw that it was 100.1. I thought perhaps this was due to teething so thought nothing of it. Close to 6pm my husband went upstairs to get her out of her crib. She was lying unresponsive in her crib, wheezing rhythmically, and not making eye contact. Her crib sheets were soaked, either by sweat or urine. My husband picked her up and she laid limp in his arms. I tried to breastfeed her to see if she'd respond, and she still remained limp and unresponsive

B5. Describe event or problem continued

showing no reaction to anything. I called the pediatrician who told us to go the ER right away. We drove to the hospital within minutes and rushed her into the ER. 4 nurses and a Dr. tried for 30 minutes to get an IV in her, during which time the left side of her body was seizing and her eyes were not focusing on anything. They gave her doses of Ativan and Phenobarbital, after which her body stopped seizing. She was transported by ambulance to another hospital with a well-equipped pediatric ICU, where she was admitted for 2 days and had all sorts of tests performed on her. She was sleeping or lethargic during her entire hospital stay. (b) (6) morning, (b) (6) she was discharged because the Dr.'s were unable to find any cause for her symptoms and diagnosed it as a complex febrile seizure.

5. Describe Event, Problem or Product Use Error

My six month old daughter was taking the Hylands Teething tablets and showed slight signs of reaction. I thought at first it was just symptoms of the teething issue itself, but then researched online and found out it could be more. She would become flushed and very sleepy after taking the teething tablets. No serious injurys, and I disposed of the remaining tablets. I just wanted to report that I am fairly sure she was having a slight reaction to this remedy

Teething tablets used august 2010 to January 2011 Tablets weren™t given on a regular basis, but when they were no more than 3 times a day 1 to 3 tabs at a time. Morning, noon and evening doses were given as part of a routine when other meds were given. Fluoride, reflux meds Tylenol or ibuprofen etc. We started using the teething tablets in August because (b) (6) did not like the Orajel. A friend had recommended them to us, since she used them with her children 10 to 14 years ago and swore by them. I began using them. (b) (6) took these tablets very easily and with enthusiasm when I reached for the bottle, there was no hesitation and smiled

B5. Describe event or problem continued

excitedly while laughing as he stuck out his tuck waiting patiently for them. Issues Bely aches/pains, Irritability, pushing to poop, screaming then farts, unexplained rashes, attributed it to formula changed formula in August, seemed to have less reflux stopped the reflux meds, still continued to have hard stools very infrequent and tough to go. (b) (6) had periods where he was very irritable and cried a lot. Most of the crying was during the night. I can recall several times where I went over to the crib to get him, pick him up because he was whining and whimpering his eyes were closed he began crying which turned to a scream, he was not soothing by my touch or my voice-.I sat him straight up -sitting on my lap-this was LATE at night- and say his name VERY LOUDLY 3 to 5 times until he finally opened his eyes and looked at me, disoriented and glazed over in the eyes at this time he would just stare at me, finally about 3 to 5 min later he would smile at me, take a bottle and began to relax again and fall asleep. When he would awaken he would cry for long periods of time, he was very restless -I would have to walk him around the house- and other times provide massages to his abdomen to help release the excess gas, then he would fart and seem to calm and fall asleep, this was a major problem for him for several months. Although the soy formula helped (b) (6) pass bowels more, the issues were still present. Some times more than others, I think this had to with the irregular administration of the teething tablets. I did notice that his heart beat very very fast at times. I especially noticed it at bed times when we were relaxing to go to bed; he was very fidgety constantly moving very restless.

F. Other (Concomitant) medical products continued

of behavior over the months of august, september, october, november and december of 2010. very worried about long term effects if any and the fact that my son suffered from poisoning for 4+ months while using this product. The fact that there wasn't much attention paid to the recall, because i know that i bought the product after November of 2010 at a local pharmacy and target. i also recieve emails from several online parenting resources and never read anything about the recall as well as watching the nightly local and world news and again NEVER heard a thing. consumer protection warrants more to be done.

5. Describe Event, Problem or Product Use Error

We have been giving our child hylands teething tablets since he started teathing and recently he had to be taken to the emergency room due to high fever. I am not 100 percent sure the tablets were to blame al young kids run fevers all the time. Although we have gave our son over 200 tablets and are not sure the long term affect of these toxins can be. I am seeking.g compensation for the original purchase plus the funds to cover the emergency room visit.

Wheezing and hard time breathing, fatigue. Took my daughter to the ER and x-rays taken to make sure that she didn't choke on any food. X-rays showed to be normal. The ER doctor looking in the back of mouth thought that she could have swelling in the back of the mouth causing her to be wheezing. Prednisone was given to reduce the swelling.
On September 15 I had my daughter checked with an Ear, Nose and Throat Dr. He diagnosed her with Croup. I had a hard time believing that due to no coughing. On September 18, I took her to her Dr. He wasn't sure if she had asthma or croup and more prednisone was given for a back up on the wheezing.
The last couple of days I found out about the recall

Individual Safety Report

7331394-5-00-01

CaseID:7859446

FORM 3500

CDER
DQRS

2-20-11

Dear FDA staff,

I read in the Feb 2011 newsletter of Worst Pills (www.worstpills.org), published by Public Citizen's Dr. S. Wolfe, that (1) Hyland's teething tablets were recalled. The first reason they should never have been allowed on the market is that they don't work, biologically speaking. Consumers pay $5.99 for 80 lactose. The second reason that you may not be aware of, is that they are a choking hazard. A few years ago, a mother told me that she put the tablet under her 7 month-old son's tongue, as per the instructions on the package. The pill dissolved, choked him, then he turned blue. Fortunately, he was finally able to cough it up. I think all teething pills should be banned, not just Hyland's. Thx.

5. Describe Event, Problem or Product Use Error

My 13 mo old grandaughter was in the care of my husband and I. I gave her 1 dose of Hyland's teething tablets and childrens motrin about 1 hr after breakfast, and another dose of teething tablets before her nap.She woke up from napping fussy. When I picked her up her eyes rolled back in her head and she was very nonresponsive. I rushed her to the hospital. After several tests the Dr. told my husband and I her urinalysis showed positive for cannabinoids. I was arrested for child felony endangerment, my grandaughter was detained,and hospitalized. My husband and I knew she did not ingest marijuana, we do not use marijuana. In researching we

Submission of a report does not constitute an admission that medical personnel or the product caused or contributed to the event.

B5. Describe event or problem continued

found the type of urinalysis test used at the hospital was an Immunoassay drug screen which is not a confirmed test, a 2nd test called a Gas Chromatography/ Mass Spectrometry test must be ran for confirmation due to cross-reactivity problems with other over the counter drugs causing the first test to read a false positive. The second test was never done. Ibrophen can show as a false positive for marijuana in the test used. Then discovering the teething tablets had been recalled and the described symptoms of belladonna poisoning matched my grandaughters symptoms we are convinced the tablets are responsible for her condition that day. We still have the bottle of teething tablets in our possession and the upc# matches your recalled list We feel our grandaughter was misdiagnosed and the teething tablets that are labeled 100% natural, no side effects are to blame for my grandaughter being poisoned and taken from her family. She still remains in foster care as our family fights to get her returned.

NATURE OF COMPLAINT: 5 MONTH OLD DAUGHTER STARTED HAVING SEIZURES AND DIFFICULTY BREATHING AND WHAT APPEARED TO BE VISION PROBLEMS SHORTLY AFTER THEY STARTED USING HYLAND'S TEETHING TABLETS. HER EYES WOULD ROLL BACK IN HER HEAD AND HER HEAD WOULD JERK. FOR SHORT PERIODS, SHE SEEMED TO STOP BREATHING OR TAKE LONGER PERIODS THAN NORMAL WITHOUT A BREATH, WHICH SEEMED UNUSUAL. SHE WOULD SQUINT HER EYES AND SHAKE HER HEAD A LOT AT THE SAME TIME AND SHE SEEMED TO SPIT UP A LOT.

5. Describe Event, Problem or Product Use Error

After the use of Hyland's teething tablets prior to going to bed our son woke us up crying at about 2:00 AM. By about 3:30 AM he had a severe rash with hives over his entire body, including the soles of his feet. There was pronounced swelling of his knees, lips, arms, and cheeks. His ears were a flaming red color and he had a low grade fever. We have him a very small dose of benaydryl -- 1/4 teaspoon- and a cool bath. This suppressed the fever somewhat, but did not relieve the other symptoms. We took him to the E.R. where he was given a 1 teaspoon dose of benadryl and a steroid shot. The E.R. doctor advised 1 tsp doses of benadryl

every 6 hrs for a few days, with a followup visit to his pediatrician if the symptoms got worse, or did not go away. Instead of waiting we went ahead and took him to see his pediatrician who prescribed the epi pen in case of emergency, and a 5 day prescription for oral steroid medication. He also referred us to a local MD for allergy testing. At this point we had no idea what could have caused the allergic reaction, and knew nothing of the recall of the Hyland's teething tablets. The steroid shot in E.R. significantly reduced the symptoms immediately. The severe hives and swelling subsided over a period of a few hours. But the red rash on his cheeks did not totally go away for several days. When we went to the allergy M.D. we opted for the full scope of blood based allergy testing for both airborn and food related allergies.

B6. Relevant tests/laboratory data, including dates continued

correlates with our observations of previous minor irritation after physical contact with pollen. The localized skin rash which occurs is eliminated with a small dose of benadryl. He had a single item which tested as a 4, which was egg whites. He tested negative for egg yolk. We had previously had an experience with minor facial rash due to eating scrambled eggs. Nothing in the allergy testing correlated with the degree of reaction observed on Feb 15, 2011. Also, he was not exposed during that evening to any of the items he tested positive for. Since that evening we have learned of the recall of the Hyland's teething tablets last October. We immediately stopped using the product. We did give him these tablets prior to bed time, and we have notice that since then the intermittent minor skin rash on his cheeks which we have observed for several months has gone away. We suspect that the minor skin rash, and more importantly the severe reaction, may have been due to the teething tablets. We have two bottles of this product which were purchased prior to the recall. One is from Hyland's lot number 109515. The other is from lot 108134. We think he was given tablets from lot 108134 on the evening of the severe reaction. If it is possible, we would like to send you the remaining product for testing. If the FDA cannot accept these samples for analysis, please recommend a laboratory. We would like to confirm whether or not we should be concerned about some other source of life threatening allergic reaction. We are not interested in making any claim against Hyland's. But we will not use their products again.

5. Describe Event, Problem or Product Use Error

Parent gave baby girl Hyland's teething tablets for 2 days. Parent did not know of recall. Tablets had been given to parent at baby shower. Within 20 minutes of taking the product, baby girl would fall asleep and be very groggy. Baby girl also became constipated and would not drink as many bottles. However...baby girl also has a cold and the constipation and decrease in appetite could be from that.

IMMEDIATELY RELIEVES TEETHING PAIN

CHERRY FLAVORED

Baby Orajel®

TEETHING PAIN MEDICINE

Benzocaine 7.5%

NET WT 0.33 OZ (9.4 g)

Oral Pain Reliever
For Teething

Active ingredient Benzocaine 7.5%

Use temporarily relieves sore gums due to teething in infants and children 4 months of age and older

Warnings **Allergy alert:** do not use this product if your baby has a history of allergy to local anesthetics such as procaine, butacaine, benzocaine or other "caine" anesthetics

Do not use ■ more than directed ■ for more than 7 days unless told to do so by a dentist or doctor

When using this product ■ fever and nasal congestion are not symptoms of teething and may indicate the presence of infection. If these symptoms do not go away, advise your dentist or doctor.

Stop use and ask a dentist or doctor if ■ sore mouth symptoms do not get better in 7 days ■ irritation, pain or redness does not go away ■ swelling, rash or fever develops

Keep out of reach of children. In case of overdose or allergic reaction, get medical help or contact a Poison Control Center right away.

Directions ■ wash hands ■ cut open tip of tube on score mark ■ use your fingertip or cotton applicator to apply a small pea-size amount of Baby Orajel ■ apply to the affected area up to four times daily or as directed by a dentist or doctor ■ for infants under 4 months of age, ask a dentist or doctor

Other information do not use if tube tip is cut prior to opening

5. Describe Event or Problem

On April 18, 2011 at 11:00AM I received a telephone call from a pharmacist who stated that an employee of the hospital purchased a bottle of Humphreys Very Cherry Teething Relief Pellets, administered them to her son who later experienced a reaction. I asked to have the employee contact me directly for more information regarding this incident. At 5:00PM on April 18, 2011 I received a telephone call from the mother who informed me that on April 6, 2011 upon the recommendation of several other mothers who encouraged her to try Humphreys Very Cherry Teething Relief Pellets, she purchased a bottle of said pellets, Lot# A470C. On April 9, 2011 she administered one pellet to her son and then on April 10, 2011 another 2 pellets. The mother reported further that on April 11, 12 and 13 the child went to day care but was experiencing jerky motions. The mother reported further that on (b) (6) at 8:00PM the child had a seizure which spiked between (b) (6) and (b) (6) On (b) (6) (b) (6) the mother took her son to the emergency room at the local hospital. Blood tests were conducted. The child had no fever.

B.5. **Describe Event or Problem** *(continued)*

On (b) (6) the child was scheduled for an EEG to be conducted on Friday, April 15, 2011. There were no negative results found from either the blood tests or the EEG. The mother told me that at this point the child seemed to be getting better. The mother did not indicate to me that further intervention was needed or conducted. During this conversation I asked the mother that she have her physician contact me for further discussion. The mother did not give me the doctor's name or contact information. I advised the mother that we would send a mailing envelope to her and asked that she return the product in the envelope to my attention for our laboratory to analyze. Lot# A470C was manufactured from April 2, 2009 to May 14, 2009 yielding (b) (4) units (bottles) of product. No other complaints have been made on this Lot#. On April 19, 2011 a mailing envelope was sent to the mother to return the unused portion of the product. We received the product on April 26, 2011 and brought it to the laboratory for analysis. Finished product testing was conducted showing no signs of adulteration, contamination or deterioration. Micro testing was conducted demonstrating that the product was free from any microbial contamination. I attempted to contact the mother at 9:15AM, April 23,2011(left message), at 11:00AM, April 24,2011(left message) and again at 10:45AM, April 29, 2011 (left message). On May 2, 2011 at 10:50AM the mother called me to tell me that for over two weeks her son did not have any further incidents and has returned to normal. The EEGs were conducted by her pediatric neurologist who found no further problems. I asked that she have her doctor contact me for further discussion. I have not received any correspondence from her doctor as of this date, however we are reporting this incident as a matter of record.

B.6. **Relevant Tests/Laboratory Data, Including Dates** *(continued)*

B.7. **Other Relevant History, Including Preexisting Medical Conditions** *(e.g., allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.) (continued)*

all over his body with a hive like rash, and was unable to sleep. On the morning of 5-25-2011 we again took him to see his pediatrician, who was not able to determine the cause of the sever rash and breathing problem. On the evening of 5-25-2011 my wife was about to give him the teething tablets again, I immediately stopped her and realized it was the only thing he had been given different in the recent days. I did a quick google search and noticed that a similiar product containing Belladonna had been banned by the FDA. I feel this product is what caused the sever allergic reaction to my child, and request an immediate investigation into Humphreys teething tablets.

5. Describe Event, Problem or Product Use Error

I gave my daughter 3 Hyland teething tablets last night before bed in her bottle. She slept fine but woke this morning with a cough and minor upper respiratory wheezing. She drank a bottle, sounded better and went back to sleep. My husband said that she was super sleepy this morning and difficult to wake. She did go to daycare and was fine all day. When I picked her up this afternoon, her cheeks were really red. She doesn't seem to be getting sick this evening so the coughing seems really odd. This is the second or third time that I've noticed her have a cough after taking these tablets. I started evaluating what an allergy would look

5. Describe Event or Problem

On May 12, 2011, at 5:06 PM EST we received an email through our company website from a customer who purchased a carton of Humphreys Teething Relief Pellets. The report from the respondent indicated that her granddaughter had apparent seizures after taking two of the teething pellets. She called a pediatrician and pharmacy and was told (in error) that there was a warning issued for the product. After receiving the email, I placed a call to the respondent at 11:45 AM on 5/13/11 to inform her that she was confusing our product with another brand that was, in fact, voluntarily recalled. I was sent to her voicemail and could not leave a message as her mailbox was full. I then proceeded to send an email to her stating that there had been no limit for use or removal of our product from the market, that we would do all that was necessary to resolve the issue and would like to discuss it further. I included both the company phone number and cell phone number and sent the email at 12:03 PM. I called again at 3:04 PM that same day and tried to establish a conversation with the respondent, however she hung up on me. I immediately called back, but there was no answer. On 5/13/11 at 7:20 PM I received an email from the

respondent who stated that she would contact me when she had a moment. I responded on 5/16/11 at 9:18 AM, stating that we believe that, like many people, she had confused our product with another brand of similar name which was voluntarily recalled. I also stated that Humphreys Pharmacal did not have any issues and was not the subject of a recall. On 5/16/11 at 11:37 AM she responded via email, stating that the pediatrician told her of a warning on our teething pellets and that the active ingredient belladonna is toxic. On 5/16/11 at 1:23 PM I responded via e-mail, again indicating that our products were not those in question and provided two links which detailed the recall of Hyland's teething products: http://www.fda.gov/safety/recalls/ucm230769.htm and http://www.hydlandsteething.com/recall/teething-tablet-recall-faq/html. In addition, I also provided information on the safety and efficacy of belladonna, referencing the governing compendium, The Homeopathic Pharmacopoeia of the United States (HPUS) and discussed the long history of safety of our product. Lastly I requested the lot number of the product from her and asked that she return the product to us for testing. On 5/16/11 at 6:01 PM via email, the respondent thanked us and provided a link as well: http://fda.gov/ForConsumers/ConsumerUpdates/ucm230762.htm. My last correspondence was on 5/17/11 at 3:14 PM in which I thanked her for the link and pointed out its mention of the long history of medicinal use and safety of the ingredient and asked her to contact us at her earliest convenience for further discussion. Also, I again encouraged her to provide us with the lot number of the product and any other information. To date, we have received no further correspondence from the respondent regarding this or any other issue. We are, however, reporting this incident as a matter of record.

5. Describe Event or Problem

On Tuesday, June 7, 2011 we received an email through our company website from an initial reporter (mother) who stated that upon administration of Humphreys Teething Relief Swift Strips her daughter experienced an alleged adverse reaction. After receiving the inquiry, I placed a call to the initial reporter that same day and left a message asking her to contact me. The following day on 6/8 at 6:00PM I received a phone call from the initial reporter. During the call she stated that after administering said product, her daughter experienced apparent seizures that later subsided. She subsequently took her daughter to the hospital for an EEG examination. I asked if she could return the product to us for our evaluation, however, she stated she no longer had it. I then set up a time to call her the next day on Thursday, 6/9 at 3:00 PM. During this call the reporter stated that at this time her daughter was fine and not experiencing any further adverse conditions. She also said that her daughter's EEG turned out to be normal showing she was not at risk for seizures. The reporter then said that she would also be taking her to a pediatric neurologist just to be sure everything was fine.

r MANDATORY reporting

FORM FDA 3500A (6/10) *(continued)*

B.5. Describe Event or Problem *(continued)*

When questioned about frequency of use, the initial reporter stated that she had been giving her daughter the product every day for two weeks, twice a day, one strip in the morning and one at night. Although there was no definitive correlation between said product and the alleged event, the reporter was concerned because of the recent recall of a similar product. We assured her that Humphreys did not have any issues with our products and we were not the subject of a recall. The voluntary recall that she had heard of was exclusive to the other company' s products. I concluded the discussion by stating we are willing to help in any way possible and offered to talk to her physician. She said not at this time, but would offer that suggestion during her next visit to her physician. No further communication has taken place since 6/9/2011. We are submitting this report as a matter of record.

B.6. Relevant Tests/Laboratory Data, Including Dates *(continued)*

Mfr Report # 2280705-2011-00018

UF/Importer Report #

FDA Use Only

PLEASE TYPE OR USE BLACK INK

A. PATIENT INFORMATION

1. Patient Identifier (b) (6) In confidence
2. Age at Time of Event: 19 Months or Date of Birth:
3. Sex: ☐ Female ☑ Male
4. Weight: ____ lbs or ____ kgs

B. ADVERSE EVENT OR PRODUCT PROBLEM

1. ☑ Adverse Event and/or ☐ Product Problem *(e.g., defects/malfunctions)*

2. Outcomes Attributed to Adverse Event *(Check all that apply)*
- ☐ Death: ____ *(mm/dd/yyyy)*
- ☐ Disability or Permanent Damage
- ☐ Life-threatening
- ☐ Congenital Anomaly/Birth Defect
- ☑ Hospitalization - initial or prolonged
- ☐ Other Serious (Important Medical Events)
- ☐ Required Intervention to Prevent Permanent Impairment/Damage (Devices)

3. Date of Event *(mm/dd/yyyy)*: 06/23/2011

4. Date of This Report *(mm/dd/yyyy)*: 07/14/2011

5. Describe Event or Problem

Consumer reported she applied the product for (b) (6) days before her child displayed any symptoms. On the (b) (6) day the child had a bluish skin color, swollen lips and was lethargic - basically unresponsive.

Child was given oxygen and transported to the hospital. He was given methylene blue and diagnosed with methemoglobinemia due to benzocaine in the product.

Child was reported to be better at the time the incident was reported.

Consumer did not return product for evaluation. A lot report was generated and no other similar complaints were reported for this lot code for this product. Review of batch records revealed no non-conformance.

6. Relevant Tests/Laboratory Data, Including Dates

Other information do not use if tube tip is cut prior to opening

Inactive ingredients ammonium glycyrrhizate, flavor, glycerin, polyethylene glycol, purified water, red 40, sodium saccharin, sorbic acid, sorbitol

NIGHTTIME Formula

Drug Facts

Active ingredient — **Purpose**
Benzocaine 10%..... Oral pain reliever

Use temporarily relieves sore gums due to teething in infants and children 4 months of age and older

Warnings

Allergy alert: do not use this product if your baby has a history of allergy to local anesthetics such as procaine, butacaine, benzocaine or other "caine" anesthetics

Do not use
- more than directed
- for more than 7 days unless told to do so by a dentist or doctor

When using this product
- fever and nasal congestion are not symptoms of teething and may indicate the presence of infection. If these symptoms do not go away, advise your dentist or doctor.

NIGHTTIME Formula

Drug Facts (continued)

Stop use and ask a dentist or doctor if
- sore mouth symptoms do not get better in 7 days
- irritation, pain or redness does not go away
- swelling, rash or fever develops

Keep out of reach of children.
In case of overdose or allergic reaction, get medical help or contact a Poison Control Center right away.

Directions
- wash hands
- cut open tip of tube on score mark
- use your fingertip or cotton applicator to apply a small pea-size amount of Baby Orajel
- apply to the affected area up to four times daily or as directed by a dentist or doctor
- for infants under 4 months of age, ask a dentist or doctor

Other information do not use if tube tip is cut prior to opening

Inactive ingredients ammonium glycyrrhizate, flavor, glycerin, polyethylene glycol, purified water, red 40, sodium saccharin, sorbic acid, sorbitol

(b) (6)

Individual Safety Report

7755732-4-00-02

(b) (6)

(b) (6)

I had a patient admitted over the weekend, who had a very alarming reaction to a product.
This so called "teething tablet" was purchased in Walmart, (b) (6) at the baby section.
Produced by a company called Hyland's. This is a Homeopathic product, not regulated by the FDA. When you see in the ingredients listed, one of them is Belladonna alkaloid. The list does not include the mg being in a pill. So who can tell how much or so. The family gave me this bottle, with the pills in it.
This child touched a shrimp, did not ingest it, later went unresponsive for ~ 45 min also mother tells me her pupils were pinpoint.
No other symptoms noted. I am sure this was not an allergic reaction, but a toxic effect of Belladonna
I would like you to report it, find contact at the FDA, so we can start an investigation and pull this dangerous, unregulated product from the shelves.
Thank you so much (b) (6)

10/16/2011	10/28/2011

5. Describe Event or Problem

MOTHER STARTED BABY TEETHING TABLETS FOR THE FIRST TIME ON 10/15/11 AND GAVE 1 TABLET AT A TIME EVERY HOUR FOR 3 DOSES (SO 3 TABLETS TOTAL ON 10/15/11). NO OTHER DOSES OF BABY TEETHING TABLETS GIVEN. LATE (b) (6) (b) (6) EYES STARTED SHAKING (NYSTAGMUS), UPPER BODY TREMORS(HEAD, NECK, ARMS). WENT TO THE ER (b) (6) AT NOON, NOT ADMITTED TO HOSPITAL. IN THE HOSPITAL, NEUROLOGY ASSESSED CHILD. MOTHER WAS TOLD TO OBSERVE THE CHILD AND SENT HOME. THE MORNING OF (b) (6) SEIZURES WORSENED AND MOTHER AND CHILD WENT BACK TO THE ER. PERFORMED CT SCAN WHICH WAS NORMAL. TOLD TO CONTINUE TO MONITOR SYMPTOMS AND SEE A NEUROLOGIST IN 2 WEEKS. MOTHER ALSO REPORTED THAT CHILD HAD A LOW GRADE FEVER OFF AND ON FROM 10/11 TO 10/13 (UP TO 101.6F). WENT TO SEE PMD ON 10/13 AND BLOOD WORK SHOWED "SLIGHTLY ELEVATED WBC" PER MOTHER. CHILD GIVEN AN INJECTION OF ROCEPHIN ON 10/14. NO ANTI-SEIZURE MEDS HAVE BEEN PRESCRIBED AT THIS TIME.

PHONE #: (b) (6)

E-MAIL:

NATURE OF COMPLAINT: GAVE GRANDSON 2 BABY TEETHING TABLETS AT 11:30 THIS MORNING AND A HALF HOUR LATER HE HAD "A PETIT MAL SEIZURE". HE WAS STRETCHED OUT ON THE FLOOR UNDER THE TABLET AND WAS "TENSE". SHE GAVE HIM A "CHEST RUB" AND HE "CAME TO" WITH GLOSSY EYES, LETHARGIC AND DROOPY. A DOCTOR WAS CALLED AND HE SAID TO BRING IN THE CHILD ONLY IF HE HAD ANOTHER EPISODE. THE CHILD HAD IBUPROFEN YESTERDAY FOR "MOUTH ULCERS". HE WAS ALSO VACCINATED IN SEPTEMBER 2011. THERE IS A HISTORY OF GRAND MAL SEIZURES (CHILD'S MATERNAL AUNT). CHILD HAD AN EAR INFECTION 2 WEEKS PRIOR AND WAS TREATED WITH TYLENOL AND IBUPROFEN. URGED GRANDMOTHER TO TAKE CHILD TO BE ASSESSED BY A DOCTOR.

4. Date of This Report (mm/dd/yyyy): 12/13/2011

5. Describe Event or Problem

Reference number 2011AP002941 is a spontaneous case report received on 02-Dec-2011 from an attorney pertaining to a 33-year-old male who experienced plantar fasciitis, foot pain, fall, thoracolumbar strain, pharyngitis, myalgia, fatty liver infiltration, diabetes mellitus, gastritis, light headedness, nausea, thyroid nodule, urinary tract infection (UTI), navicular fracture, unspecified viral infection, fatigue, bodyaches, chest pain, sleep apnea, snoring, back injury, back pain, cellulitis of foot, rash to his leg foot and elbow and drug reaction while using lisininopril, hydrochlorothiazide (strength and manufacturer unknown), hydroxycut carb control capsules, hydroxycut hardcore drink packets (ignition stix) , hydroxycut hardcore ready to drink, hydroxycut max liquid caps, hydroxycut natural caplets, hydroxycut regular rapid release caplets and vicodin.

Patient had a medical history of pharyngitis, fractured lumbar spine, bulging cervical discs, hypertension, motor vehicle accident (lower back pain, band and shoulder pain), insomnia, possible aseptic meningitis (required hospitalization in (b) (6) cultures were negative), ulnar styloid fractures, work accident/hit by forklift (2003, lower back strain and shoulder instability), headaches, earaches, hypertriglyceridemia, hypercholesterolemia, dorsal +

6. Relevant Tests/Laboratory Data, Including Dates

06-FEB-2006: ALT 165 (10-50), AST 80 (13-40)
15-JUN-2007: abdominal ultrasound-possible fatty infiltration of liver
21-JUN-2007: AST 138 (13-40), ALT 226 (10-50)
09-AUG-2007: MRI-thyroid nodule, TSR WNL
11-OCT-2007: wrist x-ray-possible subtle fracture along the neck of the navicular bone
26-NOV-2007: TSR WNL, triglycerides 288 (30-200), +

7. Other Relevant History,Including Preexisting Medical Conditions (e.g. allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.)

PHARYNGITIS
LUMBAR VERTEBRAL FRACTURE
SLIPPED CERVICAL DISC
buldging servical disc
MOTOR VEHICLE ACCIDENT
Motor vehicle accident caused lower back pain,hand pain and shoulder pain.
INSOMNIA
ASEPTIC MENINGITIS +

Apotex Inc. - Mfr. report # 2011AP002941

B2. Other Outcome - Continued

Med Significant - MEDICALLY SIGNIFICANT

B5. Describe Event or Problem - Continued

calcaneal spur, smoked 1/2 to 1 pack (for 10-20 years, chewing tobaco use), alcohol use (weekly to twice monthly), subconjunctival hemorrhage, mild hepatomegaly, abdominal pain, upper respiratory infection, increased aspartate aminotransferase (AST) and alanine aminotransferase (ALT), tinea pedis, eczema, dyspepsia, hand laceration, GERD, achilles tendon avulsion (subsequent mild spurring), recurrent UTIs, renal calculi and plantar fasciitis. Patient's concomitant medications included clonidine, Diovan (valsartan), Lipitor (atorvastatin calcium) (drug discontinued in Jun-2007), Plendil (felodipine), Tenoretic (atenolol and chlortalidone) and Atarax (hydroxyzine).

On an unknown date, the consumer started using lisinopril (dose and frequency unknown) for hypertension and vicodin (dose and frequency unknown) for back pain. On 22-Aug-2003, the patient started treatment with hydrochlorothiazide for hypertension. On an unspecified date in 2007, the patient started using hydroxycut carb control capsules, hydroxycut natural caplets and hydroxycut regular rapid release caplets. In Nov-2007, patient started Hydroxycut max liquid caps. In Feb-2009, he started with hydroxycut hardcore drink packets (ignition stix). In Apr-2009, hydroxycut hardcore ready to drink was started. It should be noted that hydroxycut hardcore drink packets (ignition stix), hydroxycut hardcore ready to drink and hydroxycut max liquid caps were not available until Feb-2009, Apr-2009, and Nov-2007 respectively. On 04-Jan-2007, after starting the product, the patient experienced recurrent plantar fasciitis (PLANTAR FASCIITIS) and foot pain (FOOT PAIN) which was treated with an injection of lidocaine, marcaine and celestone Soluspan (betamethasone injectable suspension). On an unspecified date in Feb-2007, the consumer fell (FALL) and injured his back (BACK INJURY). He was diagnosed with thoracolumbar strain (LUMBAR STRAIN) and treated with Flexeril (cyclobenzaprine hydrochloride) and another undecipherable medication. On 05-Feb-2007, he developed an unspecified viral infection (VIRAL INFECTION) with symptoms of fatigue (FATIGUE) and body aches (ACHE). On 08-Feb-2007, he was diagnosed with pharyngitis (PHARYNGITIS) after developing a headache, coughing and a sore throat. Treatment included amoxicillin. On an unspecified date in Jun-2007, the consumer experienced myalgia (MYALGIA) (resolved on an unknown date). On 15-Jun-2007, an abdominal ultrasound revealed possible fatty infiltration of the liver (FATTY LIVER INFILTRATION). On 21-Jun-2007, the consumer's ALT was 226 (10-50) and his AST was 138 (13-40). On 27-JUN-2007, the consumer was evaluated for burning stomach pain and diagnosed with gastritis (GASTRITIS). Treatment included omeprazole 20 mg. On 28-JUN-2007, a gastroenterologist confirmed the consumer's fatty liver disease and recommended weight loss, decreasing alcohol intake, and rechecking the liver function tests in 3 months. On 27-Jul-2007, the consumer became light headed (LIGHT HEADEDNESS) and nauseous (NAUSEA) after taking vicodin. The lightheadedness and nausea resolved the same day, and vicodin use continued. On 09-Aug-2007, magnetic resonance imaging (MRI) revealed a thyroid nodule (THYROID NODULE). Thyroid-stimulating hormone (TSH) was within normal limits (WNL), and it was ultimately determined that that thyroid nodule was of no consequence. On 02-OCT-2007, he was diagnosed with an UTI (UTI). On 11-OCT-2007, the consumer fell, injured his wrist, and was in pain. An x-ray revealed a possible subtle fracture along the neck of the navicular bone (NAVICULAR FRACTURE), and the wrist was splinted. The information regarding resolution and other treatment could not be deciphered. On 26-NOV-2007, lab work was repeated and revealed TSH WNL, triglycerides 288 (30-200), cholesterol 238 (less than 200), glucose 165 (65-115), AST 45 (13-40), and ALT 105 (10-50). On 09-Jan-2008, his A1C was 6.2 (4.8-6.0). On 14-Jan-2008, the consumer's medical records note controlled diabetes mellitus (DIABETES MELLITUS). On 12-Mar-2008, the consumer experienced chest pain (CHEST PAIN). Troponins, cardiac markers, electrocardiogram (EKG) and a chest x-ray were within normal limits. He was treated with Aspirin (acetylsalicylic acid) 325 mg. Medical records from 02-Jun-2008 note sleep apnea (SLEEP APNEA), snoring (SNORING), and continued back pain (BACK PAIN) from previous falls. He was advised to schedule a sleep study to further evaluate the sleep apnea, but the consumer refused. On 03-Jun-2008, he was diagnosed with cellulitis of the right foot (CELLULITIS OF FOOT) and treated with Augmentin (amoxicillin and clavulanate). On 10-Jun-2008, the consumer was re-evaluated as a rash had spread to his legs, foot, and elbows (RASH) and was diagnosed with a drug reaction (DRUG ALLERGY), and treatment with lisinopril, hydroxycut carb control capsules, hydroxycut hardcore drink packets (ignition stix), hydroxycut hardcore ready to drink, hydroxycut max liquid caps, hydroxycut natural caplets, hydroxycut regular rapid release caplets and HCTZ were discontinued.

The manufacturer of lisinopril and hydrochlorothiazide was not identified however, Apotex product cannot be ruled out from consideration.

NATURE OF COMPLAINT: WENT TO EMERGENCY TWICE BECAUSE OF FULL SEIZURE. BABY IS 1 YEAR OLD. CONTINUES TO HAVE PROBLEMS INCLUDING PATCHY BALDNESS. GREAT-GRANDMOTHER CALLED TO REPORT AND SHE WOULD NOT PROVIDE MORE DETAILS AND WAS NOT CERTAIN WHICH PRODUCT IT WAS BECAUSE SHE DOES NOT LIVE IN THE SAME CITY AS THE CHILD. SHE WILL BE SEEING FAMILY OVER CHRISTMAS AND MAY OBTAIN MORE INFORMATION AT THAT TIME. OUR PHARMACIST STRESSED IMPORTANCE OF HAVING PARENTS CALL US TO PROVIDE MORE INFORMATION AND SHE STARTED THAT THEY ALREADY REPORTED IT, POSSIBLY TO FDA.

Hi Thao,

If possible let's private message them asking to call our Product Information Service at 1-800-624-9659 to let us know about their experience with the product and for more information. Let me know if we can do that. If not, then we'll have to post a reply and ask her to contact us.

Thanks,
Edyta

Subject: Teething Tabs page

Sorry...was at dinner in (b) (6)

(b) (6)

Used these for the first time yesterday for my 7 month old who is teething. 30 minutes later he had a seizure and we went to the ER!!! WARNING TO PARENTS: Belladonna, an ingredient in these tablets, is a poison!! The FDA recalled this product in 2010 because the ingredient was not properly regulated. Research this product and the ingredient Belladonna online and decide whether teething discomfort in your child is worth putting them in harm's way!!!

3. Date of Event (mm/dd/yyyy)

4. Date of This Report (mm/dd/yyyy): 04/02/2012

5. Describe Event or Problem

Reference number 2012AP000827 is a literature case report received on 24-Mar-2012, pertaining to a 65-year-old female patient who developed reversible cerebral vasoconstriction syndrome, hyperacusis, photophobia, nausea, bilateral leg weakness and visual disturbances due to drug interaction between citalopram (strength and manufacturer unknown) and Hydroxycut.

The medical history of the patient includes migraines, hysterectomy, depression, hyperlipidaemia, lumbar spinal compression fractures and multiple miscarriages. She had no family history of migraines or strokes. Concomitant medication of the patient included simvastatin at a dose of 40 mg daily for hyperlipidaemia.

The patient was started on citalopram at a dose of 20mg daily for depression. She was taking citalopram for several years. On an unknown date she presented to a local hospital with sudden-onset, bifrontal, pounding headache described as getting hit in the head with an axe. The headache was described as the worst of her life and did not improve after she took acetaminophen, caffeine, and butalbital. There was hyperacusis (HYPERACUSIS), photophobia (PHOTOPHOBIA) and nausea (NAUSEA). Two weeks prior to her thunderclap headache the patient had started weight-loss supplement +

6. Relevant Tests/Laboratory Data, Including Dates

- body mass index was 22.3
- Noncontrast head computed tomography (CT) and brain magnetic resonance imaging (MRI) at the time of admission - Normal
- MRI revealed areas of restricted diffusion consistent with acute infarcts in the bilateral anterior cerebral artery territories and in right occipital lobe +

7. Other Relevant History, Including Preexisting Medical Conditions (e.g. allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.)

B5. Describe Event or Problem - Continued

Hydroxycut. Non contrast head computed tomography (CT) and brain magnetic resonance imaging (MRI) at the time of admission were normal and she was treated with prednisone for presumed intractable migraine. She had milder headache one week prior to her current presentation. On admission, her body mass index was 22.3, and she was normotensive on lisinopril 10mg daily. She had not previously been on lisinopril, which was presumably initiated at the outside hospital for prednisone induced hypertension. Lisinopril was held during hospital stay given her normal to low blood pressures. Her fasting lipid panel revealed cholesterol 223mg/dL, triglycerides 141mg/dL, high density lipoprotein 61mg/dL, low density lipoprotein 134mg/dL, very low density lipoprotein 28mg/dL and lipoprotein(a) 6 mg/dL. Two days after admission, she developed bilateral leg weakness (LOWER EXTREMITIES WEAKNESS OF) and left-sided visual disturbances (VISUAL DISTURBANCES) that she described as blank lines. A repeat MRI revealed areas of restricted diffusion consistent with acute infarcts in the bilateral anterior cerebral artery territories and in her right occipital lobe. The following investigations were unrevealing: hypercoagulability studies, rheumatic and vasculitic screening labs, magnetic resonance venography, transthoracic echocardiogram with bubble contrast, and Holter monitoring. LA lumbar puncture, performed while the patient was being treated with prednisone, revealed 0 white blood cells (WBC), 48 red blood cells (RBC), cerebrospinal fluid (CSF) protein 27mg/dL, glucose 81 mg/dL and no xanthochromia. CT angiography (CTA) was obtained, which revealed multifocal segmental cerebral artery vasoconstriction, most prominent in the bilateral anterior and posterior cerebral arteries. The diagnosis of reversible cerebral vasoconstriction syndrome (RCVS) (CALL-FLEMING SYNDROME) was made and began treatment with nimodipine 30 mg three times daily. Over the subsequent days, her headache resolved and her vision and leg weakness improved. The patient's blood pressures at admission and prior to starting nimodipine were 92-116/54-58mmHg on no antihypertensive medications. After beginning nimodipine for RCVS, her systolic blood pressures ranged from the high 80s to low 100s (mmHg). The patient received intravenous fluid bolus as needed to keep her systolic blood pressure above 90mmHg, in an effort to balance maintaining adequate cerebral perfusion while continuing nimodipine treatment for RCVS. The patient tolerated this well without any clinical decline or symptomatic hypotension. She was discharged on nimodipine and advised not to take Hydroxycut and citalopram, which had been discontinued when a diagnosis of RCVS was first suspected. At the time of discharge, her systolic blood pressures remained in the 90s to low 100s mmHg. Therefore, she was advised to measure her blood pressure at home and take nimodipine only if systolic blood pressure was over 100 mmHg. Following discharge, the patient experienced no headaches and no recurrence of her presenting symptoms. At a follow-up appointment, she had no residual leg weakness and significant improvement of her left visual field deficit, although she reported that her vision had not returned to her baseline. CTA performed six weeks after discharge showed marked resolution of cerebral vasoconstriction, confirming the diagnosis of RCVS.

Author comment: Citalopram may have acted in concert with the newly initiated Hydroxycut to cause this patient's RCVS, though the fact that she tolerated citalopram well for several years before developing RCVS argues against the antidepressant drug as the sole trigger. Given the sparse data about the efficacy and safety of herbal supplements such as Hydroxycut, it is advisable to consider the potential roles of dietary supplements and drug interactions (DRUG INTERACTION) in cases of otherwise unexplained cerebrovascular disease.

Citation: Cvetanovich GL, Ramakrishnan P, Klein JP, Rao VR, Ropper AH. Reversible cerebral vasoconstriction syndrome in a patient taking citalopram and Hydroxycut: A case report. Journal of Medical Case Reports. 2011; 5(548):1-5.

The manufacturer of citalopram was not identified; however, the Apotex brand of product cannot be excluded from consideration.

B6. Relevant Tests/Laboratory Data - Continued

- hypercoagulability studies, rheumatic and vasculitic screening labs, magnetic resonance venography, transthoracic echocardiogram with bubble contrast, and Holter monitoring- dose not reveal anything
- LA lumbar puncture- revealed 0 white blood cells (WBC), 48 red blood cells and no xanthochromia
- CT angiography revealed multifocal segmental cerebral artery vasoconstriction.
-Patient's blood pressures at admission and prior to starting nimodipine were 92-116/54-58 mmHg.
-After beginning nimodipine for RCVS, her systolic blood pressures ranged from the high 80s to low 100s (mmHg).
-At the time of discharge, her systolic blood pressures remained in the 90s to low 100s mmHg.

INSTANTLY RELIEVES TEETHING PAIN

Orajel® TEETHING PAIN MEDICINE

Oral Pain Reliever For Teething REGULAR FORMULA

Benzocaine 7.5% NET WT 0.18 OZ (5.1g)

Active Ingredient **Purpose**

Benzocaine 7.5% ..... Oral Pain Reliever

Use for the temporary relief of sore gums due to teething in children 2 years of age and older. For use in children under the age of 2, consult a physician or healthcare provider.

Warnings

Allergy alert: do not use this product if your child has a history of allergy to local anesthetics such as procaine, butacaine, benzocaine or other "caine" anesthetics

Do not use ■ more than directed ■ for more than 7 days unless directed by a physician or healthcare provider

When using this product ■ fever and nasal congestion are not symptoms of teething and may indicate the presence of infection. If these symptoms persist, consult your physician.

Stop use and ask a physician if ■ sore mouth symptoms do not get better in 7 days ■ irritation, pain or redness does not go away ■ swelling, rash or fever develops

Keep out of reach of children. In case of overdose or allergic reaction, get medical help or contact a Poison Control Center right away.

Directions ■ wash hands ■ cut open tip of tube on score mark ■ do not use if tube tip is cut prior to opening ■ use your fingertip or cotton applicator to apply a small pea-size amount of Orajel and spread over the gums ■ apply to the affected area up to 4 times daily or as directed by a physician or healthcare provider ■ for children under 2 years of age, consult a physician or healthcare provider

3. Date of Event *(mm/dd/yyyy)*: 06/26/2012

4. Date of This Report *(mm/dd/yyyy)*: 07/19/2012

5. Describe Event or Problem

MOTHER GAVE HER SON THE FIRST DOSE OF TEETHING TABLETS AT THE SAME TIME HE WAS BEGINNING TO HAVE 'BREATHING PROBLEMS: GASPING FOR AIR, RETRACTION, HARD TO GET ENOUGH AIR'. HE WENT TO THE HOSPITAL (b) (6) WHERE HE WAS OBSERVED FOR (b) (6) HOURS THEN RELEASED. CHILD HAD FEVER OF 103F BEFORE GOING TO HOSPITAL WHERE AFTER (b) (6) HOURS HIS FEVER DROPPED TO 101F. MOTHER CONTINUED GIVING CHILD TEETHING TABLETS AGAIN ON 06/27/12 FOR 5 DAYS (1 TABLET PER DAY) AND SYMPTOMS DID NOT RETURN.

HOSPITAL THOUGHT IT MIGHT BE AN INFANT FORM OF ASTHMA, BUT DID DMAKE A DEFINITIVE DIAGNOSIS, SAYING CHILD WAS TOO YOUNG.

PHONE #: (b) (6)

E-MAIL:

NATURE OF COMPLAINT: MOTHER GAVE HER SON THE FIRST DOSE OF TEETHING TABLETS AT THE SAME TIME THAT HE WAS BEGINNING TO HAVE 'BREATHING PROBLEMS: GASPING FOR AIR, RETRACTION, HARD TO GET ENOUGH AIR'. HE WENT TO THE HOSPITAL (b) (6) WHERE HE WAS OBSERVED FOR (b) HOURS THEN RELEASED. HIS FATHER HAS A HISTORY OF INFANT ASTHMA WHEN HE WAS YOUNG. THE MOTHER CONTINUED GIVING CHILD THE TEETHING TABLETS ON THEIR RETURN HOME FOR THE NEXT 5 DAYS, WHEN SHE HEARD OF THE RECALL AND CALLED TO INQUIRE. MOTHER SAID HER SON WAS HAVING 6 TEETH COME THROUGH AT THE SAME TIME. IT WAS ALSO MENTIONED THAT THE MOTHER CALLED THE COMPANY HOTLINE AND HEARD THAT ALL TEETHING TABLET PRODUCTS WERE ON RECALL WHICH WORRIED HER.

DQRS

FDA USE ONLY

Triage unit sequence # 491705

Adverse Event Reporting Program

A. PATIENT INFORMATION

1. Patient Identifier	2. Age at Time of Event, or Date of Birth:	3. Sex	4. Weight
(b) (6) In confidence	(b) (6) 7 Months	☑ Female ☐ Male	18.5 lb or ____ kg

B. ADVERSE EVENT, PRODUCT PROBLEM OR ERROR

Check all that apply:

1. ☐ Adverse Event ☑ Product Problem *(e.g., defects/malfunctions)*
   ☐ Product Use Error ☐ Problem with Different Manufacturer of Same Medicine

2. Outcomes Attributed to Adverse Event *(Check all that apply)*
   ☐ Death: ____ *(mm/dd/yyyy)* ☐ Disability or Permanent Damage
   ☐ Life-threatening ☐ Congenital Anomaly/Birth Defect
   ☑ Hospitalization - initial or prolonged ☑ Other Serious (Important Medical Events)
   ☑ Required Intervention to Prevent Permanent Impairment/Damage (Devices)

3. Date of Event *(mm/dd/yyyy)*	4. Date of this Report *(mm/dd/yyyy)*
10/25/2009	10/22/2012

5. Describe Event, Problem or Product Use Error

My daughter was diagnosed with kryptogenic infantile spasms -seizures-shortly after cutting her first tooth-9/8/2009- and while cutting her second tooth - (b) (6) Prior to this she had been perfectly healthy and on track with her development. We had used Hyland's Teething Tablets, which I was reading recently could be the cause of seizures in infants and any possible conections should be reported. We always followed the vague dosing instructions.

ZIP CODE:

PHONE #: (b) (6)

E-MAIL:

NATURE OF COMPLAINT: CALL CAME IN THROUGH THE BEEPER SERVICE ON (b) (6) A FATHER CALLED AND LEFT A MESSAGE ABOUT A WHITE TABLET HE GAVE HIS SON FROM OUR BTET BOTTLE WITH THE IMPRINT TARO-11. HE WAS INQUIRING WHETHER THIS WAS ACTUALLY A TEETHING TABLET BECAUSE HIS SONE WAS EXHIBITING SYMPTOMS AND HE WAS IN THE EMERGENCY ROOM WITH HIM. WHEN I CALLED BACK HE TOLD ME THAT HE WENT TO THE ER BECAUSE HE GAVE HIS SON THIS TABLET THAT WAS IN THE BTET BOTTLE ON 10/20/12 AND (b) (6) THE CHILD WAS SHOWING SOME DIZZINESS/VERTIFO AND HE WAS NOT SURE WHERE IT WAS DUE TO THIS TABLET OR AN EAR INFECTION THAT THE CHILD ALSO HAD. WHEN I QUESTIONED HIM ABOUT THE FOREIGHT TABLET IN THE BOTTLE, HE SAID THAT HE STRONGLY SUSPECTED THAT IT WAS HIS MOTHER-IN-LAW'S BECAUSE SHE WAS TAKING THIS MEDICATION. 10/25/12 FOLLOW-UP: FATHER TOLD ME THE CHILD'S SYMPTOMS WERE DETERMINED IN THE HOSPITAL TO BE DUE TO THE TABLET HE HAD GIVEN HIM AND THAT THE CHILD WAS HOSPITALIZED FOR 2 DAYS WHILE LEVELS OF THE DRUG WERE MONITORED. FATHER STATED THAT THE TABLET WAS TEGRETOL (WHICH IS CARBAMAZEPINE) AND CONFIRMED THAT THIS WAS A DRUG THAT HIS MOTHER-IN-LAW IS TAKING AND THAT SHE HAD PUT IT IN THE BOTTLE AND HE HAD GIVEN IT TO THE CHILD UNKNOWNINGLY. THE SYMPTOMS HAVE RESOLVED AND THE CHILD IS FINE. THE FATHER STATED "IT'S NOT Y'ALLS FAULT".

NATURE OF COMPLAINT: I HAVE BEEN UNABLE TO REACH DETECTIVE (b) (6) BY PHONE, BUT HAVE ANSWERED HIS REQUESTS LEFT ON VOICE MAIL. HE SAID THE HOSPITAL CALLED HIM AFTER A BABY DIED. THEY NOTICED THE BABY HAD BEEN TAKING TEETHING TABLETS, AND WAS CONCERNED ABOUT THE PAST RECALL, AND THE REMEDY BELLADONNA. THE DETECTIVE WANTED TO KNOW THE DATE OF MANUFACTURE OF THE PRODUCT, AND IT WAS GIVEN: DEC. 13, 2011. HE MENTIONED ON THE PHONE, THAT THEY ARE NOT DRAWING ANY CONCLUSIONS ABOUT THE REMEDY, BUT JUST WANT THE INFORMATION. I LEFT A MESSAGE THAT THIS WAS A RE-FORMULATED PRODUCT, THE BELLADONNA WAS SAFE AT 12X, AND IT WAS NOT A RECALLED PRODUCT AS IS.

FOR ADDITIONAL SPACE PLEASE USE REVERSE OR ATTACH A SEPARATE SHEET

NATURE OF COMPLAINT: A MOTHER CALLED TO REPORT THAT HER 5 MONTH OLD HAS BEEN HOSPITALIZED WITH BABY BOTULISM. CHILD WENT TO THE ER ON (b) (6) IN THE EVENING WITH SYMPTOMS OF CONSTIPATION X 1 WEEK, HEAD LAG, INABILITY TO REACH OR GRAB, NOT RESPONDING, NOT EATING OR SUCKING. CHILD WAS ADMITTED TO THE HOSPITAL AND BOTULISM WAS CONFIRMED, HOWEVER THEY ARE WAITING FOR RESULTS OF STOOL SAMPLES FOR CONFIRMATION. CHILD IS RECEIVING IV FLUIDS AND WILL BE GIVEN A FEEDING TUBE. THE MOTHER HAD BEEN USING THE BABY TEETHING TABLETS 2 TABLETS AS NEEDED AT BEDTIME 2 – 5 TIMES A WEEK FOR 1 MONTH. CHILD IS BREASTFED AND STARTED CEREAL ABOUT 1 MONTH AGO. THE MOTHER REPORTS THAT THE CHILD ALSO TAKES ZANTAC 1 ML TWICE A DAY. HE HAD MENINGITIS WHEN HE WAS 7 WEEKS OLD AND WAS TREATED. CHILD HAS NOT EATEN ANY CANNED FOODS OR HONEY. BECAUSE OF INTERNET REPORTS ON BOTULISM FOR TEETHING TABLETS PRIOR TO THE RECALL, THE DOCTORS HAVE SUSPECTED THE TEETHING TABLETS AND HAVE FILED A REPORT WITH THE FDA ACCORDING TO THE MOTHER, BUT AFTER AN INFECTIOUS DISEASE CONSULT THE DOCTORS ARE NOW LEANING TOWARD BREASTFEEDING AS BEING THE POSSIBLE CAUSE, BUT HAVE NOT RULED OUT THE TEETHING TABLETS ENTIRELY. THE MOTHER WAS UNABLE TO PROVIDE A LOT # BUT STATED THEY PURCHASED PRODUCT FROM RITEAID A FEW WEEKS AGO. OUR PHARMACIST ASKED HER TO TRY TO GET THE LOT # FOR OUR INVESTIGATION. SHE SAID THAT THE HOSPITAL TOOK THE BOTTLE.

FOR ADDITIONAL SPACE PLEASE USE REVERSE OR ATTACH A SEPARATE SHEET

5. Describe Event, Problem or Product Use Error

My two year old daughter has been tested for every possible disease and medical problem that you could possible think of. She's had seizures, GI problems-absorption, constipation, severe pain-, muscle weakness-recieved Early Intervention-, extremely high body temperatures, increased heart rate, sleep apnea, and not growing at the proper rate of a child her age. With all the different testing that they have done on her most have come back inconclusive. They classified her seizures as febrile even though her neurologist said they were not "typical". Doctors suggested that her tonsils and adenoids be removed for the apnea but breathing problems

More

6. Relevant Tests/Laboratory Data, Including Dates

She has had so many tests done from hospital ER visits, neurology, geneticist, infectious disease, visits to specialists at hospitals away from home, as well as from her own PCP that test/lab results will take some time to gather, due to the fact that she as been so many places and has had so many

5. Describe Event, Problem or Product Use Error

I have been giving my daughter hylands teething tabs for about three months, she has had a rash and hives pretty much the entire time she has been taking them. I didn't realize it was an allergic reaction the doctor kept telling me it was eczema. She breaks out really bad and turns super red after she takes them. She hasn't been urinating like normal. She's been constipated. After I give them to her she's wide awake freaking out screaming and crying. Doesn't want to eat like normal. She's been dehydrated.

(b) (6) was given Hylands teething tablets on Saturday, Sunday and Monday -April 6, 7, 8,- On (b) (6) at approx 4:30 pm the baby uncharacteristically fell asleep while in play. She was picked up by the mother and was lifeless and floppy. She did not respond to verbal cues nor to visual cues. She was taken to the Emergency Room. Upon examination, (b) (6) was found to have rapid heartrate and dialated pupils. She was in and out of a deep, confused sleep and awakened dazed and without recognition of parents. She had at this point vomited approximately 5 times. She would not feed nor urinate. She had one bought of diarhea. (b) (6) was admitted to

B5. Describe event or problem continued

the hospital where her symptoms worsened. She was put on IV and had one dose of broad spectrum antibiotic. There was no CHANGE. She continued to vomit and her vomit became coffee grind looking. She was given blood work, urinalysis, Catscan,EKG,EEG catheterization, MRI and a spinal tap. All were normal. By the 4th day (b) (6) was beginning to respond and seemed less lethargic. Eventually, she was given and abdominal ultrasound and by this point her intestines had folded in on themselves and required surgery. (b) (6) is at this point recovering. She is a breast fed baby, only watched by mother and grandmother. No other issues and the tablets are the only out of the ordinary thing.

3. Date of Event (mm/dd/yyyy): 09/01/2010
4. Date of This Report (mm/dd/yyyy): 03/23/2011
5. Describe Event or Problem

GAVE CHILD 3 TABS 4X DAILY FOR 1 TO 2 WEEKS IN 09/10. MOTHER HAD USED IN THE PAST AS NEEDED, BUT FOR A 1-2 WEEK PERIOD SHE INCREASED THE DOSE AND FREQUENCY. CHILD HAD 2 SEIZURES; ONE LASTER ABOUT 90 SECONDS AND THE OTHER 45 SECONDS. SEIZURES OCCURRED ON A DAY WHEN HE HAD THE TABLETS, BUT SHE COULD NOT REMEMBER THE PROXIMITY TO TAKING THE TABLETS. TOOK CHILD TO THE DOCTOR ON OCTOBER 1ST. CHILD HAD EEG AND CT SCAN.

HAS NOT USED TEETHING TABLETS SINCE 09/10. CHILD HAS NOT EXPERIENCED ANY SEIZURES SINCE THIS EPISODE. RESULTS OF EEG AND CT SCAN WERE NORMAL. MD DOESN'T KNOW WHAT CAUSED THE SEIZURES.

6. Relevant Tests/Laboratory Data, Including Dates

10/10. EEG AND CT SCAN

APR 06 2011

7. Other Relevant History, Including Preexisting Medical Conditions (e.g., allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.)

Submission of a report does not constitute an admission that medical personnel, user facility, importer, distributor, manufacturer or product caused or contributed to the event.

NATURE OF COMPLAINT: WAS GIVING CHILD 3 TABS 4 X DAY FOR APPROXIMATELY 1 – 2 WEEKS IN SEPTEMBER 2010. MOTHER HAD USED PRODUCT IN THE PAST AS NEEDED, BUT FOR 1 - 2 WEEK PERIOD, SHE INCREASED THE DOSE AND FREQUENCY. CHILD HAD 2 SEIZURES; ONE LASTED ABOUT 90 SECONDS AND THE OTHER 45 SECONDS. SEIZURES OCCURRED ON A DAY WHEN HE HAD THE TABLETS, BUT SHE COULD NOT REMEMBER THE PROXIMITY TO TAKING THE TABLETS. TOOK CHILD TO THE DOCTOR ON OCTOBER 1ST. CHILD HAD AN EEG AND CT SCAN. HAS NOT USED TEETHING TABLETS SINCE SEPTEMBER 2010. CHILD HAS NOT EXPERIENCED ANY SEIZURES SINCE THIS EPISODE. RESULTS OF EEG AND CT SCAN WERE NORMAL. MD DID NOT KNOW WHAT CAUSED THE SEIZURES.

Active Ingredient (in each 15-mL tablespoon): Dextrose (Glucose) 4.35 g, Levulose (Fructose) 4.17 g, Sodium citrate dihydrate 0.921 g. ***Uses:*** For the relief of nausea associated with upset stomach, including that due to overindulgence in food or drink. **Warnings:** Do not use if you have Hereditary Fructose Intolerance (HFI). This product contains fructose. Ask a doctor before use if you have diabetes because this product contains sugar or are on a sodium-restricted diet. Ask a doctor or pharmacist before use if you are taking any other medications. Antacids may interact with certain prescription drugs. While using this product do not take more than 6 doses in a 24-hour period. Stop use and ask a doctor if nausea lasts more than two weeks or recurs frequently. If pregnant or breast-feeding, ask a health professional before use. Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away. ***Directions:*** Read all package directions and warnings before use and use only as directed. Adults: 1 – 2 tablespoons (15 – 30 ml). Children: Consult a doctor for appropriate dosage. Dosage may be repeated after 30 minutes not to exceed 6 doses in a 24-hour period unless advised by a doctor. For maximum effectiveness never dilute NAUZENE or drink fluids of any kind immediately before or after taking NAUZENE. NAUZENE Liquid is intended for use by normally healthy persons only. Persons under 18 years of age should use only as directed by a doctor. ***Other Information:*** Sodium content 193 mg/tablespoon (15 mL). Store at room temperature. ****Contents sealed:*** Each bottle of NAUZENE Liquid has a tamper evident seal around the cap and a safety seal under the cap. Do not use if either of these seals appears broken. NOTE: NAUZENE is not intended as a substitute for a balanced nutritional diet or as an electrolyte replenishment. Serious side effects associated with the use of this product may be reported to the phone number provided below. ***Inactive Ingredients:*** Corn syrup, FD&C Red No. 40 Lake, flavor, fructose syrup, glycerin, methylparaben, phosphoric acid, purified water.

Nauzene® Liquid — Wild Cherry Flavor

Drug Facts

Active ingredients (in each 15-mL tablespoon)	Purpose
Dextrose (Glucose) 4.35 g	Anti-nausea
Levulose (Fructose) 4.17 g	Anti-nausea
Sodium citrate dihydrate, 0.921 g	Antacid

Uses For the relief of nausea associated with upset stomach, including that due to overindulgence in food or drink.

Warnings

Do not use if you have Hereditary Fructose Intolerance (HFI). This product contains fructose.

Ask a doctor before use if you ▪ have diabetes because this product contains sugar ▪ are on a sodium-restricted diet.

Ask a doctor or pharmacist before use if you are taking any other medications. Antacids may interact with certain prescription drugs.

When using this product do not take more than 6 doses in a 24-hour period.

Stop use and ask a doctor if nausea lasts more than two weeks or recurs frequently.

If pregnant or breast feeding, ask a health professional before use.

Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away.

Directions ▪ Read all package directions and warnings before use and use only as directed. ▪ Adults: 1 - 2 tablespoons (15 - 30 mL). ▪ Children: Consult a doctor for appropriate dosage. ▪ Dosage may be repeated after 30 minutes not to exceed 6 doses in a 24-hour period unless advised by a doctor. ▪ For maximum effectiveness never dilute Nauzene or drink fluids of any kind immediately before or after taking Nauzene. ▪ Nauzene Liquid is intended for use by normally healthy persons only. ▪ Persons under 18 years of age should use only as directed by a doctor.

Drug Facts (continued)

Other Information: ▪ Sodium content 193 mg/tablespoon (15 mL) ▪ Store at room temperature ▪ ****Contents sealed:** Each bottle of Nauzene Liquid has a tamper evident seal around the cap and a safety seal under the cap. Do not use if either of these seals appears broken. NOTE: Nauzene is not intended as a substitute for a balanced nutritional diet or as an electrolyte replenishment. ▪ Serious side effects associated with the use of this product may be reported to the phone number provided below.

Inactive Ingredients Corn syrup, FD&C Red No. 40 lake, flavor, fructose syrup, glycerin, methylparaben, phosphoric acid, purified water.

Questions? 1-800-792-2582

*ALVA-AMCO trade name for sodium citrate dihydrate is **Electrolyte-S10™**.

KEEP TIGHTLY CLOSED WHEN NOT IN USE. STORE AWAY FROM EXCESSIVE HEAT AND COLD.

09/01/2010	12/02/2010

5. Describe Event or Problem

STARTED TEETHING TABLETS IN FEB. 2010 AND GAVE THEM FOR A MONTH. CHILD DEVELOPED URINATION PROBLEMS (BURNING, SCREAMING UPON URINATION, RED AND DRY IN URETHRAL AREA). AGITATION DESCRIBED AS 'SNAPPING' AT ANYTHING, HITTING, KICKING. MUSCLE WEAKNESS IN ARMS AND LEGS BECAUSE SHE WAS UNABLE TO CRAWL. 'MILD SEIZURES' DESCRIBED BY MOTHER AS SLIGHT TWITCHING AND SHAKING OF THE MUSCLES OF THE ARMS AND LEGS. AGITATION CONTINUES BUT OTHER SYMPTOMS ENDED ON 11/30/10 WHEN MOTHER FOUND OUT ABOUT RECALL. CHILD TOOK 3 TABS QID DAILY WHEN SHE WAS TEETHING. SYMPTOMS WENT AWAY AFTER DISCONTINUED USE OF PRODUCT. RESTARTED USE OF PRODUCT IN SEPT. 2010 AND SYMPTOMS RETURNED. CHILD HAS HAD LOW GRADE FEVER (99.8 - 100.8 OVER LAST 3 MONTHS FOR WHICH CHILD WAS GIVEN IBUPROFEN OR INFANT TYLENOL. ALSO ON PREVACID FOR ACID REFLUX. ALL URINE TESTS WERE CLEAR SO NOT BACTERIAL INFECTION.

6. Relevant Tests/Laboratory Data, Including Dates

URINE TESTS TO CHECK FOR UTI.

ALL URINE TESTS CLEAR SO NOT BACTERIAL INFECTION.

7. Other Relevant History, Including Preexisting Medical Conditions *(e.g., allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.)*

ACID REFLUX

TAKING PREVACID FOR ACID REFLUX.

SECTION I: COMPLAINT

COMPLAINT #: RVD102810TG-002

TAKEN BY: TUTTI GOULD

DATE OF COMPLAINT: 10/28/10

PRODUCT: TEETHING TABLETS

ITEM CODE: TEET

SIZE:

LOT NO.: DID NOT HAVE BOTTLE

REPORTER: (b) (6)

ADDRESS:

CITY: (b) (6)

STATE: (b) (6)

COUNTRY: USA

ZIP CODE: (b) (6)

PHONE #: (b) (6)

E-MAIL:

NATURE OF COMPLAINT: GRANDSON, WHO LIVES WITH HIM, HAS BEEN TAKING TEETHING TABLETS FOR HIS TEETHING PROBLEMS OVER THE LAST COUPLE OF MONTHS. AS OF WEEK OF OCTOBER 17TH, HE BEGAN CUTTING HIS 'JAW TEETH', AND TOOK THE TEETHING TABS. (b) (6) LATER HE BEGAN VOMITING, HAD 'LIGHT FEVER' AND NOT EATING, HE HAD FATIGUE, DRY MOUTH, WAS PALE AND DID NOT WANT TO DO ANYTHING. FAMILY BROUGHT HIM TO THE HOSPITAL (b) (6) DAYS LATER AND BLOOD TESTS REVEALED WBC COUNT OF OVER 26,000. HE HAD EATEN A 'CALACHI', A BREAD LIKE BISCUIT WITH HAM AND CHEESE JUST BEFORE HE BEGAN VOMITING. HE IS STILL IN THE HOSPITAL AND IS WHINY, LETHARGIC AND ARCHES HIS BACK.

1. Patient Identifier: (b) (6) In confidence
2. Age at Time of Event: 17 Months or Date of Birth:
3. Sex: ☐ Female ☒ Male
4. Weight: 29 lbs or 13 kgs

B. ADVERSE EVENT OR PRODUCT PROBLEM

1. ☒ Adverse Event and/or ☐ Product Problem (e.g., defects/malfunctions)

2. Outcomes Attributed to Adverse Event (Check all that apply)
- ☐ Death: _____ (mm/dd/yyyy)
- ☒ Life-threatening
- ☒ Hospitalization - initial or prolonged
- ☐ Required Intervention to Prevent Permanent Impairment/Damage (Devices)
- ☐ Disability or Permanent Damage
- ☐ Congenital Anomaly/Birth Defect
- ☐ Other Serious (Important Medical Events)

3. Date of Event (mm/dd/yyyy): 11/11/2010

4. Date of This Report (mm/dd/yyyy): 11/23/2010

5. Describe Event or Problem

AFTER ADMINISTERING TWO TEETHING TABLETS TO (b) (6) EARLIER IN THE EVENING, MOM OBSERVED BABY EXHIBITING 'WEIRD NIGHT TERRORS'. HE WAS SCREAMING WHILE SOUND ASLEEP. IT TOOK HER 10 - 15 MINS. TO WAKE HIM. WHEN AWAKENED, HE COULDN'T FOCUS ON ANYTHING. HE WAS SHAKING, TREMBLING, HAD DIALATED PUPILS AND WAS HOT AND SWEATY. THE PARENTS CALLED 911. THE BABY WAS TAKEN TO (b) (6) HOSPITAL IN (b) (6) ((b) (6) (b) (6)). HE WAS HOSPITALIZED FOR APPROX. 8 HOURS. PARENTS THOUGHT THE CHILD WAS EXHIBITING SEIZURE DISORDER AS SEIZURES RUN IN THE MOM'S FAMILY. HOWEVER, PER MOM, ALL THE TEST RESULTS FOR SEIZURE DISORDER WERE NEGATIVE (EFF AND BLOOD WORK) AND THE BABY WAS DISCHARGED. AS A RESULT, THE FAMILY HAS INCURRED NUMEROUS HOSPITAL BILLS. BACK AT HOME, THE DAY AFTER THESE EVENTS, THE MOM REPORTS THAT BABY'S NEXT BM WAS EITHER DIARRHEA OR CONSTIPATION. MOM CLAIMS THE BABY EXHIBITED SIMILAR (BUT NOT NEARLY AS ACUTE) SYMPTOMS FOLLOWING THE PRN ADMINISTRATION OF TEETHING TABLETS SUBSEQUENT TO HOSPITALIZATION. THE FAMILY CONTINUES TO WONDER WHAT CAUSED THE BABY'S SYMPTOMS.

PLEASE TYPE OR USE BLACK INK

6. Relevant Tests/Laboratory Data, Including Dates

ALL TESTS WERE NEGATIVE -- EEG AND BLOOD WORK

SEIZURES. CHILD TENSES BODY AND THEN STOPS BREATHING, AND CONVULSES FOR 1-2 MINUTES. THE PARENTS ADMINISTERED CPR AFTER THE SEIZURE. THE CHILD HAD TAKEN TEETHING TABLETS FOR THE PAST 7 MONTHS WITHOUT EVENT, MOTHER NOTICED THEY HELPED HIM STOP CRYING FROM THE PAIN OF TEETHING. BY 3:40 PM ONE DAY, CHILD HAD THE FIRST OF 5 SEIZURES THAT DAY, WITH NO FEVER. HE WAS HOSPITALIZED. SEIZURES CONTINUED EVERY 3 DAYS OR SO. THERE HAVE BEEN NONE SINCE OCT. 31ST. DISCONTINUED USE OF TEETHING TABLETS AROUND OCT. 25. MOM NOTICED SEIZURE ACTIVITY GRADUALLY LESSENED AFTER SHE STOPPED THE TABLETS. THE CHILD HAS BEEN ON ANTI-CONVULSIVE MEDICATION SINCE THE EVENT. SHE HAS GIVEN THE CHILD TYLENOL ON PREVIOUS TEETHIING TIMES.

10/27/2010	11/01/2010

5. Describe Event or Problem

THE BABY HAS BEEN USING THE TABLETS FOR SEVERAL WEEKS AND TYPICALLY CONSUMED 2 TABLETS AT A TIME. AROUND 10/16/10 THE CONSUMER HAD A LOW GRADE FEVER. ON 10/26/10 SHE CONSUMED 2 TABLETS IN THE EARLY AFTERNOON AND TWO TABLETS AROUND 8:00 PM. THE CONSUMER'S MOTHER REPORTED THAT AT APPROX. 1:30 THIS MORNING (10/27/10) THE CONSUMER FELT HOT WITH FEVER. THEN, BETWEEN 3:300 - 3:45 AM, THE CONSUMER EXPERIENCED A SEIZURE. THE CONSUMER'S MOTHER FIRST NOTICED A NOISE OVER THE BABY MONITOR AND UPON CHECKING ON THE CONSUMER SHE OBSERVED THAT THE CONSUMER WAS LYING FLAT ON HER BACK AND AT INTERVALS OF APPROXIMATELY TEN SECONDS SHE WOULD TWITCH AND GRUNT. THIS BEHAVIOR LASTED FOR APPROXIMATELY TEN MINUTES. DURING THAT TIME THE CONSUMER'S FATHER CALLED AN AFTER-HOURS NURSE FOR ADVISE. WHEN THE CONSUMER WOKE UP A FEW MINUTES LATER SHE WAS REPORTED TO BE LETHARGIC AND UNRESPONSIVE. CONSUMER'S PARENTS DECIDED NOT TO TAKE HER TO THE EMERGENCY ROOM BECAUSE THE SEIZURE STOPPED AND THE CONSUMER FELL BACK TO SLEEP. WHEN THE CONSUMER WOKE UP THIS MORNING AT APPROX. 7:30 AM, SHE WAS REPORTED TO HAVE HAD NO SYMPTOMS. THE CONSUMER WAS TAKEN TO THE DOCTOR THIS MORNING AS A FOLLOW-UP TO THE EVENTS OF FEVER, SEIZURE, AND LETHARGY. HYLAND'S TEETHING TABLETS HAVE BEEN DISCONTINUED AND THE EVENTS OF SEIZURE, FEVER, AND LETHARGY HAVE RESOLVED.

Mfr Report # 54973-...

UF/Importer Report #

FDA Use Only

PLEASE TYPE OR USE BLACK INK

A. PATIENT INFORMATION

1. Patient Identifier: (b) (6) — In confidence
2. Age at Time of Event: 4 Months — or Date of Birth:
3. Sex: ☐ Female ☑ Male
4. Weight: ____ lbs or ____ kgs

B. ADVERSE EVENT OR PRODUCT PROBLEM

1. ☑ Adverse Event and/or ☐ Product Problem *(e.g., defects/malfunctions)*

2. Outcomes Attributed to Adverse Event *(Check all that apply)*
- ☐ Death: ____ *(mm/dd/yyyy)*
- ☐ Life-threatening
- ☑ Hospitalization - initial or prolonged
- ☐ Required Intervention to Prevent Permanent Impairment/Damage (Devices)
- ☐ Disability or Permanent Damage
- ☐ Congenital Anomaly/Birth Defect
- ☐ Other Serious (Important Medical Events)

3. Date of Event *(mm/dd/yyyy)*: 04/01/2013

4. Date of This Report *(mm/dd/yyyy)*: 04/03/2013

5. Describe Event or Problem

INFANT RECEIVED 2 TABLETS X 1 DOSE AT 21:00 ON 04/01/13 AND AROUND 23:00 CHILD STARTED HAVING DIFFICULTY BREATHING, IRRITABILITY AND SLEEPINESS. ON (b) (6) THEY TOOK THE CHILD TO THE HOSPITAL BECAUSE OF THE BREATHING DIFFICULTY AND CHILD WAS ADMITTED AND RELEASED (b) (6) IN THE EVENING. IN THE HOSPITAL CHILD'S BREATHING WAS MONITORED AND BLOOD WORK AND X-RAYS WERE NORMAL. CHILD CONTINUES TO HAVE SOME PROBLEMS BREATHING AND IS SLEEPING A LOT.

6. Relevant Tests/Laboratory Data, Including Dates

BLOOD WORK AND X-RAYS. ALL WERE NORMAL. BREATHING MONITORED.

7. Other Relevant History, Including Preexisting Medical Conditions *(e.g., allergies, race, pregnancy, smoking and alcohol use, hepatic/renal dysfunction, etc.)*

CHILD WAS BORN 1 MONTH PREMATURE WITH LUNG PROBLEMS.

Submission of a report does not constitute an admission that medical personnel, user facility, importer, distributor, manufacturer or product caused or contributed to the event.

C. SUSPECT PRODUCT(S)

1. Name *(Give labeled strength & mfr/labeler)*
- #1 HYLAND'S BABY TEETHING TABLETS 135 COUNT
- #2

2. Dose, Frequency & Route Used
- #1 2 TABS 4/1 & 2 TABS PREV
- #2

3. Therapy Dates *(If unknown, give duration)* from/to *(or best estimate)*
- #1
- #2

4. Diagnosis for Use *(Indication)*
- #1 TEETHING PAIN
- #2

5. Event Abated After Use Stopped or Dose Reduced?
- #1 ☐ Yes ☐ No ☐ Doesn't Apply
- #2 ☐ Yes ☐ No ☐ Doesn't Apply

6. Lot #
- #1
- #2

7. Exp. Date
- #1
- #2

8. Event Reappeared After Reintroduction?
- #1 ☐ Yes ☐ No ☐ Doesn't Apply
- #2 ☐ Yes ☐ No ☐ Doesn't Apply

9. NDC# or Unique ID: 54973-3127-1

10. Concomitant Medical Products and Therapy Dates *(Exclude treatment of event)*

D. SUSPECT MEDICAL DEVICE

1. Brand Name
2. Common Device Name
3. Manufacturer Name, City and State
4. Model # / Lot # / Catalog # / Expiration Date *(mm/dd/yyyy)* / Serial # / Other #
5. Operator of Device: ☐ Health Professional ☐ Lay User/Patient ☐ Other:
6. If Implanted, Give Date *(mm/dd/yyyy)*
7. If Explanted, Give Date *(mm/dd/yyyy)*
8. Is this a Single-use Device that was Reprocessed and Reused on a Patient? ☐ Yes ☐ No
9. If Yes to Item No. 8, Enter Name and Address of Reprocessor
10. Device Available for Evaluation? *(Do not send to FDA)* ☐ Yes ☐ No ☐ Returned to Manufacturer on: ____ *(mm/dd/yyyy)*
11. Concomitant Medical Products and Therapy Dates *(Exclude treatment...*
