## Internet/Social Media Platforms: Correcting Independent Third-Party Misinformation About Prescription Drugs and Medical Devices

### *DRAFT GUIDANCE*

**This guidance document is being distributed for comment purposes only.**

Comments and suggestions regarding this draft document should be submitted within 90 days of publication in the *Federal Register* of the notice announcing the availability of the draft guidance. Submit electronic comments to <http://www.regulations.gov>. Submit written comments to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number listed in the notice of availability that publishes in the *Federal Register*.

For questions regarding this draft document, contact (CDER) Julie Chronis at 301-796-1200; (CBER) Office of Communication, Outreach and Development at 800-835-4709 or 240-402-7800; (CVM) Thomas Moskal at 240-276-9300; or (CDRH) Deborah Wolf at 301-796-5732.

**Guidance for Industry<sup>1</sup>**

**Internet/Social Media Platforms: Correcting Independent  
Third-Party Misinformation About  
Prescription Drugs and Medical Devices**

This draft guidance, when finalized, will represent the Food and Drug Administration’s (FDA’s or Agency’s) current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. You can use an alternative approach if the approach satisfies the requirements of the applicable statutes and regulations. If you want to discuss an alternative approach, contact the FDA staff responsible for implementing this guidance. If you cannot identify the appropriate FDA staff, call the appropriate number listed on the title page of this guidance.

**I. INTRODUCTION**

This draft guidance is intended to describe FDA’s current thinking about how manufacturers, packers, and distributors (firms) of prescription human and animal drugs (drugs) and medical devices for human use (devices)<sup>2</sup> should respond, if they choose to respond, to misinformation related to a firm’s own FDA-approved or -cleared products when that information is created or disseminated by independent third parties on the Internet or through social media or other technological venues (Internet/social media), regardless of whether that misinformation appears on a firm’s own forum or an independent third-party forum or website. This draft guidance responds to (among other things) stakeholder requests for specific guidance regarding a firm’s voluntary correction of misinformation when that misinformation is created or disseminated by an independent third party.

---

<sup>1</sup> This draft guidance has been prepared by the Office of Prescription Drug Promotion (OPDP) in the Center for Drug Evaluation and Research (CDER) in consultation with the Center for Biologics Evaluation and Research (CBER), the Center for Veterinary Medicine (CVM), and the Center for Devices and Radiological Health (CDRH).

<sup>2</sup> The recommendations in this draft guidance also apply to biological products that are approved for marketing under section 351 of the Public Health Service Act (PHS Act). Because each biological product also meets the definition of “drug” or “device” under the Federal Food, Drug, and Cosmetic Act (FD&C Act), it is also subject to regulation under provisions of the FD&C Act applicable to drugs or devices, as well as the regulations implementing these provisions, except that a biological product licensed under section 351 of the PHS Act is not required to have an approved new drug application under section 505 of the FD&C Act (21 U.S.C. 355). See PHS Act section 351(j) (42 U.S.C. 262(j)). References to “drugs” and “devices” in this guidance therefore also include biological products that fall within each of those definitions. The recommendations in this draft guidance do not apply to veterinary biological products regulated under the Virus-Serum-Toxin Act (21 U.S.C. 151, et seq.) by the U.S. Department of Agriculture. This draft guidance does not address devices solely intended for use in animals.

***Contains Nonbinding Recommendations***

*Draft – Not for Implementation*

30 FDA’s guidance documents, including this draft guidance, do not establish legally enforceable  
31 rights or responsibilities. Instead, guidances describe the Agency’s current thinking on a topic  
32 and should be viewed only as recommendations, unless specific regulatory or statutory  
33 requirements are cited. The use of the word *should* in Agency guidances means that something  
34 is suggested or recommended, but not required.

35

36 **II. BACKGROUND**

37

38 Under the Federal Food, Drug, and Cosmetic Act (FD&C Act), the Agency has responsibility for  
39 regulating the manufacture, sale, and distribution of drugs and medical devices in the United  
40 States. This authority includes oversight of the labeling of drugs and medical devices (21 U.S.C.  
41 352(a)) and the advertising of prescription drugs and restricted medical devices (21 U.S.C.  
42 352(n), (q), and (r)).<sup>3</sup>

43

44 Section 201(m) of the FD&C Act defines *labeling* as “all labels and other written, printed, or  
45 graphic matter (1) upon any article or any of its containers or wrappers, or (2) accompanying  
46 such article” (21 U.S.C. 321(m)).<sup>4</sup> The U.S. Supreme Court has explained that the language  
47 “accompanying such article” in the “labeling” definition is interpreted broadly, to include  
48 materials that supplement or explain an article. No physical attachment between the materials  
49 and the article is necessary; rather, it is the textual relationship between the items that is  
50 significant (*Kordel v. United States*, 335 U.S. 345, 350 (1948)). FDA generally recognizes two  
51 types of labeling: (1) FDA-required labeling<sup>5</sup> and (2) promotional labeling. Promotional  
52 labeling is generally any labeling, other than the FDA-required labeling, that is devised for  
53 promotion of the product. Examples of materials that may be considered promotional labeling  
54 pieces for prescription drugs are described in 21 CFR 202.1(l)(2). The scope of labeling  
55 requirements for prescription medical devices is described in 21 CFR 801.109.

56

57 The FD&C Act does not define what constitutes an “advertisement,” but FDA regulations  
58 provide several examples, including “advertisements in published journals, magazines, other

---

<sup>3</sup> Devices may become restricted by regulation issued under section 520(e) of the FD&C Act (21 U.S.C. 360j(e)), by performance standard issued pursuant to section 514(a)(2)(B)(v) (21 U.S.C. 360d(a)(2)(B)(v)), or by order approving an application for premarket approval (i.e., a PMA) pursuant to section 515(d)(1)(B)(ii) (21 U.S.C. 360e(d)(1)(B)(ii)).

<sup>4</sup> See also 21 CFR 1.3(a).

<sup>5</sup> Much FDA-required labeling is subject to FDA review and approval. For example, after drafting by the manufacturer, labeling is reviewed and approved by FDA as part of the new drug application (NDA), new animal drug application (NADA), biologics license application (BLA) or premarket approval application (PMA) review (see 21 CFR 314.50(c)(2), 514.1(b)(3), 601.2(a), 814.20(b)(10), and 814.44(d)). For devices that are subject to premarket notification (510(k)) requirements, the 510(k) must contain the proposed labeling sufficient to describe the device, its intended use, and the directions for its use (21 CFR 807.87(e)). All devices, including those exempt from premarket review, are subject to the requirements of applicable labeling regulations, including requirements for adequate directions for use (see 21 CFR Part 801). For a prescription drug or prescription device to be exempted from the FD&C Act’s requirement of adequate directions for use (21 U.S.C. 352(f)(1)), its FDA-required labeling must contain, among other information, information addressing product hazards and other risk information, as specified in FDA regulations (21 CFR 201.100(d)(1), (3), 201.105(c)(1), and 801.109).

***Contains Nonbinding Recommendations***

***Draft – Not for Implementation***

59 periodicals, and newspapers, and advertisements broadcast through media such as radio,  
60 television, and telephone communication systems” (21 CFR 202.1(1)(1)).

61  
62 The Internet and Internet-based technologies have made it easier for third parties who are  
63 independent of firms to disseminate information about drugs and devices. Information created  
64 by third parties (which for purposes of this guidance is *user-generated content* (UGC)) might  
65 appear on an interactive portion of a firm-controlled website or other interactive Internet/social  
66 media platform, or information might appear on a website or other Internet/social media platform  
67 that is independent of, or not under the control or influence of, a firm. Many Internet/social  
68 media platforms allow for real-time and continuous communications and interactions (e.g.,  
69 blogs, microblogs, social networks, online communities, and live podcasts) while other platforms  
70 do not provide a means for interactive content to be posted. Whether a forum is interactive may  
71 affect the means by which a firm is able to respond to information.

72  
73 Although the Internet has facilitated the transmission of information, allowing patients and other  
74 interested parties the opportunity to share experiences as well as to communicate with others  
75 about drugs and devices, UGC might not always be accurate and may be dangerous or harmful to  
76 the public health. For the purposes of this draft guidance, *misinformation* is defined as positive  
77 or negative incorrect representations or implications about a firm’s product created or  
78 disseminated by independent third parties who are not under the firm’s control or influence and  
79 that is not produced by, or on behalf of, or prompted by the firm in any particular. FDA has  
80 determined it may benefit the public health for firms to correct misinformation about their  
81 products (including, for example, situations in which a firm is aware of misinformation that may  
82 be dangerous or harmful to the public health).

83  
84 If a firm voluntarily corrects misinformation in a truthful and non-misleading manner and as  
85 described in this draft guidance, FDA does not intend to object if the corrective information  
86 voluntarily provided by the firm does not satisfy otherwise applicable regulatory requirements  
87 regarding labeling or advertising, if any. If a firm chooses to respond to misinformation about its  
88 products using non-truthful or misleading information or in a manner other than that  
89 recommended in this draft guidance, however, FDA may object if the information provided by  
90 the firm does not comply with applicable regulatory requirements related to labeling or  
91 advertising, if any.

92  
93 **III. DETERMINING WHETHER THIS DRAFT GUIDANCE APPLIES**

94  
95 This draft guidance does not apply when a firm *is* responsible for the product communication  
96 that contains misinformation. A firm is responsible for communications that are owned,  
97 controlled, created, or influenced, or affirmatively adopted or endorsed, by, or on behalf of, the  
98 firm. A firm is thus responsible for communications on the Internet and Internet-based  
99 platforms, such as social media, made by its employees or any agents acting on behalf of the firm

## ***Contains Nonbinding Recommendations***

### ***Draft – Not for Implementation***

100 to promote the firm’s product, and these communications must comply with any applicable  
101 regulatory requirements.<sup>6</sup> Firms should not use this guidance in these situations.

102

103 ***Example 1:*** As part of a marketing campaign, a member of a firm’s marketing  
104 department posts incorrect statements about a product’s safety or efficacy compared to  
105 the efficacy of a competitor’s product on a discussion board hosted by an independent  
106 third party. The firm is responsible for the content of the communication because the  
107 member of the firm’s marketing department is acting on behalf of the firm. Thus, this  
108 draft guidance would not apply.

109

110 Additionally, if a firm writes, collaborates on, or exerts control or influence on product-specific  
111 content provided by a third party, to the extent that responsibility for the development of the  
112 content is imputable to the firm, the recommendations set forth in this guidance do not apply.  
113 Accordingly, as a general matter, the firm must comply with all applicable regulatory  
114 requirements related to labeling or advertising for that content.

115

116 ***Example 2:*** A firm hosts a discussion group on its own website, monitors the discussion  
117 for content that does not speak positively about its product, then removes or edits  
118 postings that portray its product in a negative light, and adds positive postings about the  
119 product. This firm is exerting control over the UGC and is responsible for the resulting  
120 content. Thus, the firm’s actions would not fall under the scope of this guidance.

121

122 In contrast, this draft guidance applies when a firm is *not* responsible for a product-related  
123 communication that appears on the firm’s own forum, an independent third-party website, or  
124 through social media, and the firm chooses to correct misinformation about its own product  
125 contained in that communication. In such cases, we recommend that the firm do so as described  
126 in this draft guidance.

127

128 Firms are generally not responsible for third-party UGC about their products when the UGC is  
129 truly independent of the firm (e.g., is not produced by, or on behalf of, or prompted by the firm  
130 in any particular) regardless of whether the firm owns or operates the platform on which the  
131 communication appears.<sup>7</sup> If the firm owns or operates the platform or created or initiated the

---

<sup>6</sup> For example, with respect to prescription drugs and biologics, firms should consult the draft guidance for industry *Fulfilling Regulatory Requirements for Postmarketing Submissions of Interactive Promotional Media for Prescription Human and Animal Drugs and Biologics* for recommendations regarding how firms can fulfill regulatory requirements for postmarketing submissions of interactive promotional media (e.g., blog, message board, or chat room) for their FDA-approved products. When final, this guidance will represent the FDA’s current thinking on this topic. For the most recent version of a guidance, check the FDA Drugs guidance webpage at <http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm>.

<sup>7</sup> *Cf.* 47 U.S.C. 230(c)(1) (“no provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider”). The Communications Decency Act further defines “information content provider” as someone “responsible, in whole or in part, for the creation or development of information provided through the Internet or any other interactive computer service” (47 U.S.C. 230(f)(3)).

***Contains Nonbinding Recommendations***

*Draft – Not for Implementation*

132 forum on which such UGC appears, the firm should include an overarching clear and  
133 conspicuous statement that the firm did not create or control the UGC.

134  
135 **Example 3:** A firm becomes aware of a blogger who is posting inaccurate information  
136 about the firm’s product. The blogger does not have a relationship with the firm and the  
137 firm does not compensate the blogger for the blog or for any other activity. The firm is  
138 not responsible for the content of the blog. The firm may decide to attempt to correct the  
139 misinformation, but it is not obligated to attempt to correct it.

140  
141 **Example 4:** A firm hosts a discussion forum about its drug’s or device’s FDA-approved  
142 use on its corporate website and does not participate in the discussion, but it does monitor  
143 the forum for profanity and obscenity. The forum includes an overarching clear and  
144 conspicuous statement that the firm did not create the content of the forum. The firm is  
145 not responsible for the information that is posted by independent third parties and can, if  
146 it so chooses, correct misinformation according to this guidance.

147  
148 However, a firm’s control over, involvement with, or influence over a product-related  
149 communication, even when generated by a third party, may result in the firm being responsible  
150 for the information as a promotional communication. Thus, firms might be responsible for UGC  
151 that they solicit or influence, regardless of the forum.

152  
153 **IV. RECOMMENDATIONS FOR THE CORRECTION OF MISINFORMATION**  
154 **ABOUT PRESCRIPTION DRUGS AND MEDICAL DEVICES**

155  
156 **A. Appropriate Corrective Information**

157  
158 This draft guidance sets forth approaches a firm may use once it decides to voluntarily correct  
159 misinformation about its own product that is created or disseminated by an independent third  
160 party who is not under the firm’s control or influence. In accordance with the approaches  
161 discussed below, a firm may choose to provide appropriate truthful and non-misleading  
162 corrective information or, alternatively, it may provide a reputable source from which to obtain  
163 the correct information, such as the firm’s contact information.<sup>8</sup> For purposes of this draft  
164 guidance, to be considered “appropriate corrective information,” a firm’s communication should:

- 165  
166
  - Be relevant and responsive to the misinformation;
  - Be limited and tailored to the misinformation;
  - Be non-promotional in nature, tone, and presentation;
  - Be accurate;
- 167  
168  
169  
170  
171  
172  
173

---

<sup>8</sup> For example, a firm may choose to provide contact information for the firm’s Medical Affairs Department.

***Contains Nonbinding Recommendations***

*Draft – Not for Implementation*

- 174 • Be consistent with the FDA-required labeling for the product;  
175
- 176 • Be supported by sufficient evidence, including substantial evidence, when appropriate,  
177 for prescription drugs;  
178
- 179 • Either be posted in conjunction with the misinformation in the same area or forum (if  
180 posted directly to the forum by the firm), or should reference the misinformation and be  
181 intended to be posted in conjunction with the misinformation (if provided to the forum  
182 operator or author) (see section IV.B); and  
183
- 184 • Disclose that the person providing the corrective information is affiliated with the firm  
185 that manufactures, packs, or distributes the product.  
186

187 Because risk and other information about the product are not necessarily part of corrective  
188 information, the FDA-required labeling should be included or provided in a readily accessible  
189 format. As two examples, a firm may provide a link that goes directly to the FDA-required  
190 labeling or may provide a link that opens a new window to a portable document format (PDF)  
191 file. The information should not be provided by including a link to a promotional website even if  
192 the information is available on the promotional website. Please note that if the uniform resource  
193 locator (URL), web address, or link where viewers are directed to obtain the respective FDA-  
194 required labeling is promotional in content or tone, FDA would not consider the corrective  
195 information to fall within the scope of this draft guidance.  
196

197 ***Example 5:*** A firm discovers a chat room where participants are discussing the firm’s  
198 product for one of its approved indications—diabetes. The firm finds misinformation  
199 posted by an independent third party about the diabetes indication that the firm would  
200 like to correct according to this draft guidance. Although the product has multiple  
201 approved indications, the firm should limit its corrective information to the relevant  
202 diabetes indication being discussed.  
203

204 ***Example 6:*** An independent third party writes an online post stating that one reason he  
205 likes taking a prescription drug (or using a device) is that it has no food restrictions,  
206 which is inconsistent with information from the required labeling regarding the need to  
207 avoid taking the drug with fatty foods (or to avoid using the device in a certain way).  
208 The firm decides to correct the misinformation according to this draft guidance. The  
209 firm’s representative identifies herself as being affiliated with the firm and posts the  
210 corrective information from the required labeling. She also includes a direct link to the  
211 FDA-required labeling.  
212

213 **B. Correcting a Clearly Defined Portion of a Forum**  
214

215 FDA recognizes that the Internet, social media, and other technological venues contain a vast  
216 amount of information and even one particular forum might have a large quantity of information.  
217 It may be difficult for a firm to correct all misinformation about its products in one forum  
218 depending on the nature of the forum, the quantity of information, and the length of time the  
219 forum encompasses. Furthermore, technologies or platforms that may be used to view the forum

## ***Contains Nonbinding Recommendations***

### ***Draft – Not for Implementation***

220 affect what information will simultaneously be displayed to users. In light of these  
221 considerations, if a firm corrects one or more occurrences of misinformation, it is *not* expected to  
222 correct each piece of misinformation in an entire forum. However, a firm should clearly identify  
223 the misinformation it is correcting, define the portion of the forum it is correcting, and should  
224 correct all the misinformation that appears in that clearly defined portion. A firm should  
225 describe the location or the nature of the misinformation that was corrected and should provide a  
226 date the correction is made to ensure that parties reading the information do not assume the firm  
227 has responded to the entire forum.

228  
229 ***Example 7:*** A firm decides to correct misinformation posted by an independent third  
230 party on one page of an interactive website. The misinformation consists of three  
231 consecutive sentences about the firm’s product. The firm should correct all three  
232 sentences. It should provide a statement that the firm is responding only to the specified  
233 information on that one page and provide the date the change was made. The firm is not  
234 expected to correct misinformation that appears on other webpages of the website.

235  
236 ***Example 8:*** A firm decides to correct misinformation posted by an independent third  
237 party who has commented on a blog that allows comments. The firm should correct each  
238 piece of misinformation in the particular comment to which it is responding. The firm  
239 should provide a statement that it is responding only to one particular comment along  
240 with the date the correction is provided. The firm is not expected to correct  
241 misinformation that appears in other comments.

242  
243 A firm should correct all misinformation in the clearly defined portion of the forum it identifies.  
244 For example, if a firm chooses to correct only misinformation that portrays its product in a  
245 negative light in a third-party communication but does not address misinformation that overstates  
246 the benefits of its product in that same clearly defined portion of the communication, the firm’s  
247 actions do not meet the recommendations in this draft guidance. Additionally, if a firm chooses  
248 to correct more than one piece of misinformation in a forum, the portion of the forum that the  
249 firm is expected to correct may be defined, in part, by the locations of the pieces of  
250 misinformation the firm corrects and the location of additional pieces of misinformation.

251  
252 ***Example 9:*** A firm decides to correct misinformation posted on a blog that allows  
253 comments. The firm corrects misinformation in several blog postings that provide  
254 incorrect risk information associated with the product and makes clear it is only  
255 correcting those pieces of misinformation, but the firm does not address exaggerated  
256 efficacy claims in favor of the firm’s product in other postings that appear to readers  
257 between the postings it is correcting. Even if the firm corrects the misinformation in the  
258 limited posts it chose, the firm’s actions are not in accord with this guidance because it  
259 has intentionally selected only negative information about its product to correct while  
260 readily accessible and visible positive misinformation was not corrected.

### 261 262 **C. Approaches to Correcting Misinformation**

263  
264 If a firm chooses to correct misinformation, it may do so by correcting misinformation directly  
265 on the forum. Alternatively, the firm may provide the corrective information to the independent

***Contains Nonbinding Recommendations***

*Draft – Not for Implementation*

266 author for the author to incorporate; the firm may request that the author remove the  
267 misinformation or allow comments to be posted; or the firm may request that the site  
268 administrator remove the misinformation or allow comments to be posted. The following are  
269 examples of approaches that FDA considers to be within the scope of this draft guidance and that  
270 firms may take to correct misinformation.

271  
272 ***Example 10:*** A firm encounters misinformation posted by an independent third party  
273 about its product on a website sponsored by a patient group. The website allows  
274 comments to be posted by viewers. The firm may post corrective information directly on  
275 the website.

276  
277 ***Example 11:*** A firm finds a webpage about its product that was written by an  
278 independent third party on an Internet-based, interactive, collaboratively edited  
279 encyclopedia. The firm may choose to contact the author of the webpage and provide  
280 corrective information to the author.

281  
282 ***Example 12:*** An independent third party posts a video on a video hosting website about a  
283 firm’s product. It is not possible for viewers, such as a firm, to post comments about the  
284 video. The firm may contact the entity that administers the website and ask that entity to  
285 allow comments about the video to be posted so that the firm may post corrective  
286 information.

287  
288 FDA recognizes that a firm cannot control whether an independent third party refuses to correct  
289 the misinformation, or corrects only a portion of the misinformation even though the firm  
290 provided complete corrective information, or declines to include the respective required labeling,  
291 or declines to remove misinformation, or does not correct all the misinformation in one clearly  
292 defined part (if the firm sought to correct more than one piece of misinformation). Accordingly,  
293 FDA will not hold a firm accountable for an independent third party’s subsequent actions or lack  
294 thereof.

295  
296 ***Example 13:*** A firm finds a webpage about its product that was written by an  
297 independent third party on an interactive reference website. The firm contacts the author  
298 of the webpage and provides corrective information to the author. The firm is not  
299 accountable for the author’s subsequent actions or lack thereof.

300  
301 **D. Communications That Fall Outside the Scope of This Guidance**

302  
303 Once a firm undertakes the correction of misinformation, FDA does not expect the firm to  
304 continue to monitor the website or communication that previously included UGC containing  
305 misinformation. However, when a communication by or on behalf of the firm to the UGC  
306 author, site administrator, or the forum goes beyond the correction of misinformation, the  
307 communication falls outside the scope of this draft guidance.

308  
309 ***Example 14:*** A firm decides to correct misinformation found in a blog entry where the  
310 blogger is not affiliated with the firm. The firm is not obligated to continue to monitor  
311 the blog although it may choose to do so. The blogger responds to the firm’s correction,

***Contains Nonbinding Recommendations***

*Draft – Not for Implementation*

312 disputes the corrective information, and also brings up another facet of the product’s  
313 adverse event profile. The firm replies with additional corrective information that is  
314 consistent with the original corrective information and that corrects the new  
315 misinformation about the product’s adverse event profile. The blogger replies again and  
316 now disputes the effectiveness of the product. The firm responds again with slogans and  
317 examples of patient profiles from its marketing campaign. The slogans and patient  
318 profiles go beyond providing corrective information. The firm’s communications now  
319 must comply with any applicable regulatory requirements related to labeling or  
320 advertising.

321  
322 ***Example 15:*** An independent third party downplays a labeled contraindication on an  
323 email distribution list. A firm provides, to the distribution list recipients, the corrective  
324 information regarding the contraindication, and additionally provides information  
325 unrelated to the contraindication comparing the safety profile of its product to a  
326 competitor’s product. The firm’s communication goes beyond providing corrective  
327 information with respect to the third party’s statements about the product’s  
328 contraindication and, therefore, is not considered to be a correction of misinformation  
329 within the scope of this draft guidance.

330  
331 **E. The Consequences of Correcting Misinformation**

332  
333 When a firm voluntarily undertakes the correction of misinformation in a truthful and non-  
334 misleading manner pursuant to the recommendations in this draft guidance, FDA does not intend  
335 to object if these voluntary corrections do not satisfy otherwise applicable regulatory  
336 requirements, if any. If a firm chooses to provide information outside the scope of this draft  
337 guidance, the firm should ensure the information it provides complies with any applicable  
338 requirements related to labeling or advertising. Information considered to be outside the scope  
339 of this guidance includes information that does not meet criteria listed above.

340  
341 FDA does not expect firms to submit corrections to the Agency when correcting misinformation  
342 pursuant to this draft guidance; however, FDA recommends that firms keep records to assist in  
343 responding to questions that may come from the Agency. The records should include, for  
344 example, the content of the misinformation, where it appeared, the date it appeared or was  
345 located, the corrective information that was provided, and the date the corrective information  
346 was provided.
