**Guaranteed analysis**

- Crude Protein: not less than _____%
- Crude Fat: not less than _____%
- Crude Fiber: not less than _____%

**Ingredients**

- Ground corn
- Ground milo
- Corn gluten meal
- Wheat middlings
- Dehydrated alfalfa meal
- Fish meal
- Animal fat with BHT
- Soybean oil meal
- Riboflavin supplement
- Calcium pantothenate
- Niacin, Vit. B12 supplement
- Vit. A & D3
- Ground limestone 1% Salt ½%
- Manganese sulfate 0.02%
- Deflourinated phosphate ½%
- Potassium iodide 0.002%
Feeding Directions

Calculate the amount of THIS feed that the pigs to be treated should eat within 3 to 12 days to get a total dose of 9 mg of fenbendazole per kilogram body weight (4.08 mg fenbendazole per pound body weight). Feed as the sole feed the calculated amount. When it is fully consumed resume normal feeding.

Lincomycin is combined with fenbendazole in this Type C feed at 100 grams of lincomycin per ton of feed.

**WARNING:** Do not slaughter swine for human consumption for 6 days following last treatment with lincomycin.

**CAUTION:** Occasionally, swine fed lincomycin may, within the first 2 days after the onset of treatment, develop diarrhea and/or swelling of the anus. On rare occasions, some pigs may show reddening of the skin and irritable behavior. These conditions have been self-correcting within 5-8 days without discontinuing the lincomycin treatment. Do not allow rabbits, hamsters, guinea pigs, horses or ruminants access to feeds containing lincomycin. Ingestion by these species may result in severe gastrointestinal effects. The effects of lincomycin on swine reproductive performance, pregnancy, and lactation have not been determined.

**SPECIAL CONSIDERATION:** Feeds containing lincomycin are not to be fed to swine that weigh more than 250 lb.
