⁵When added.

⁶If added.

⁷Shall be guaranteed only when total sodium exceeds that furnished by the maximum salt guarantee.

⁸Other than precursors of Vitamin A.

INGREDIENTS

Each ingredient must be named in accordance with the names and definitions adopted by the Association of American Feed Control Officials.

DIRECTIONS FOR USE

Must be top dressed or mixed with a complete ration containing monensin (10 to 40 g/ton), tylosin (8 to 10 g/ton) and ractopamine (9.8 to 24.6 g/ton).

Feed at the rate of 0.5-2.0 pound(s) per head per day (specify one level) to provide 0.25-0.5 mg melengestrol acetate per head per day (specify one level). Feed melengestrol acetate in this combination for the final 28 to 42 days on feed.

CAUTION

Melengestrol acetate is not effective in steers and spayed heifers.

Withdrawal periods of three to five days should be avoided to prevent the possibility that the heifers may come into estrus (heat) at the time of loading.

Do not use in any finished feed (supplement, concentrate or complete feed) containing in excess of 2% bentonite.

WARNING

A withdrawal time has not been established for pre-ruminating calves. Do not use in calves to be processed for veal.
