**CAUTION**

In gilts to be used as breeding stock: Do not use hygromycin B because of hearing and vision impairment side effects. In sows: Consideration should be given to hearing and vision impairment side effects. If fed, use for no longer than 8 weeks during gestation and lactation. A reduced response to sound and vision has been noticed in some swine fed hygromycin B. This impairment of hearing and vision is not an important problem in the market hog. It should, however, be carefully evaluated for breeding stock. Should sows be affected, they will become less responsive to the squeal of baby pigs, possibly resulting in crushed pigs.

**WARNING:** Withdraw 15 days before slaughter.
