SWINE

**For Swine:** Mix 25 to 50 pounds of Type B (2 g/lb) or 1 ¼ to 2 ½ pounds of Type B (40 g/lb) with non-medicated feed ingredients to make a ton of swine feed for reducing the incidence of cervical lymphadenitis (jowl abscesses) caused by *Group E Streptococci* susceptible to chlortetracycline containing 50-100 g/ton to be fed continuously.

**For Breeding Swine:** Mix 200 pounds of Type B (2 g/lb) or 10 pounds of Type B (40 g/lb) with non-medicated feed ingredients to make a ton of swine feed for the control of leptospirosis (reducing the incidence of abortions and shedding of leptospirae) caused by *Leptospiro pomona* susceptible to chlortetracycline containing 400 g/ton to be fed continuously for not more than 14 days.
Mix an amount of Type B feed to provide 400 g/ton varying with body weight and feed consumption to provide 10 mg/lb body weight/day in the resulting Type C medicated feed with non-medicated feed ingredients to make a ton of swine feed for the treatment of bacterial enteritis caused by *Escherichia coli* and *Salmonella choleraesuis* and bacterial pneumonia caused by *Pasteurella multocida* susceptible to chlortetracycline to be fed for not more than 14 days.

**WARNING:** Zero-day withdrawal period.

*The final printed label must bear a single drug concentration.
