

- 6) Are the feed suppliers monitored? If so do you perform on site inspections of the suppliers?
- 7) Do you monitor the horse's body weight? If so please describe how the body weight is monitored and how frequently.
- 8) What is the incidence of colic in the production animals? Is there a correlation between immunization and colic?
- 9) Does immunization affect the horses feed intake? If so please describe in detail the affect and duration of the affect.
- 10) Do you monitor the horse's body temperature? If so please describe the technique and frequency. Is there a relationship between elevated body temperature and immunization?
- 11) Do any of the paddocks or pastures have areas of standing water? Please describe the drainage patterns of the pastures/paddocks and provide elevation diagrams of all areas where the horses have access.

C. Horse prophylactic immunization.

- 1) Please vaccinate and appropriately booster all horses and other animals on the farm (cats, dogs) with the appropriate rabies vaccine.
- 2) Please vaccinate and appropriately booster all horses with the trivalent vaccine covering EEE, WEE and VEE.

D. OC on production serum:

- 1).What considerations are given to withdrawal times in respect to agents administered to the horse e.g. anthelmintics, antibiotics, analgesics, expectorants, etc. prior to blood collection?

E. Venom immunization procedure:

- 1) Item 4, D, d mentions the use of -----(b)(4)----- in "The primary booster immunization". Please clarify, is the (b)(4) used only in the primary immunization or is it used in any booster immunization? What concentration and volume of ----(b)(4)---- is used and is this administered at one or more injection sites? What is the source of the --(b)(4)--? How is the --(b)(4)-- stored?
- 2) Please clarify the use of your term "challenges". Do you use the word "challenges" to mean -----(b)(4)-----?
- 3) What is the total volume administered at the time of immunization -----(b)(4)-----?
- 4) Post- immunization does the horse experience any more then transient discomfort (pain)? If so is this associated with the --(b)(4)-- and/or the concentration of venom?
- 4) What is the incidence of abscesses at the site of immunization?
- 5) Item 4, D, d mentions after the horses are bled -----
------(b)(4)-----?
