Observation 1

Your Pharmacy is producing sterile drugs in Compounding Aseptic Isolator (CAI) that is located in an unclassified buffer room. In addition, injectable sterile products are assigned a BUD of greater than 12 hours. For example, your pharmacy produced approximately a total of combined [**] Morphine and Hydrocodone prescriptions for the year 2016 that were assigned a BUD of 48 hours at room temperature and 14 days in the refrigerator.
