

**BAG OR BULK**

**HEIFER CONCENTRATE  
Medicated  
(Type B Medicated Feed)  
For Beef and Dairy Heifers**

**INDICATIONS**

Heifers Fed in Confinement for Slaughter: For Increased Rate of Weight Gain, Improved Feed Efficiency and Suppression of Estrus (Heat).

Heifers Intended for Reproduction: For Suppression of Estrus (Heat).

**ACTIVE DRUG INGREDIENT**

Melengestrol acetate (0.00044 -0.0011)%  
Each pound contains (2.0 - 5.0) mg. melengestrol acetate.

**GUARANTEED ANALYSIS**

Crude Protein, not less than	_____%
Crude Fat, not less than	_____%
Crude Fiber, not more than	_____%

**INGREDIENTS**

Each ingredient must be specifically named (unless stated as such in the guaranteed analysis listing) in accordance with the names and definitions adopted by the AAFCO. Include also ingredients of the trace mineral and vitamin premixes. Collective terms may be used in accordance with 21 CFR § 501.110.

**MIXING DIRECTIONS AND USE**

Must be diluted to the final Type C medicated feed containing 0.125-1.0 mg melengestrol acetate per pound. Mix 50 to 1000 pounds of this Type B medicated feed with 1950 to 1000 pounds of non-medicated feed to manufacture 1 ton of a Type C medicated feed containing 0.125-1.0 mg melengestrol acetate per pound. The resulting Type C feed, containing melengestrol acetate, must be top dressed on grain or roughage or thoroughly mixed with a complete ration at the rate of 0.5 to 2.0 pounds per head daily.

**CAUTION:**

Not effective in steers and spayed heifers.

**Heifers Fed in Confinement for Slaughter:** Withdrawal periods of three to five days should be avoided to prevent the possibility that the heifers may come into estrus (heat) at the time of loading.

**Heifers Intended for Reproduction:** Do not exceed 24 days of feeding. A reduced conception rate can be expected if heifers are bred at estruses observed within 1 to 12 days after withdrawal of melengestrol acetate, whereas heifers bred at subsequent observed estruses are expected to have normal conception rates.
