CVM eSubmitter Installer

Installation Directory Guidance

The next step will be to identify the installation directory where the CVM eSubmitter application will be installed.

The application attempts to perform an auto-update each time it is opened to ensure the most current submission templates and application features are always available. Therefore, it is important to specify a location where the user(s) have the necessary privileges to support the updating of application files.

Within Windows, it is generally best to NOT install to a folder within "Program Files" since many organizations will not support file updates within that location.

If you have any questions related to the selection of an appropriate installation directory within your infrastuture, contact your internal IT department or the CVM eSubmitter help-desk team at: "cvmesubmitter@fda.hhs.gov.

Click the "Next" button to select the installation directory.

# Select Location / Begin Install

Installation Complete

Application / Working Folder Structure

- Users (default workstation install)
  - Public
    - CVM_eSubmitter_Home
      - Addressbook* – contact/address information
      - Data* – eSubmitter data files (xml)
      - Output – Generated Report files
      - Package* – Submission (zip) to transmit through the ESG to CVM
      - Temp – Temporary files generated during the packaging process

Note: Can be located anywhere (e.g., network), configured through application preferences

Auto-Update Process

Manual Setup for Proxy Servers (security)

Steps to configure CVM eSubmitter to receive updates through a proxy server

1. Open the "CVMeSubmitter.properties" file in notepad (files is located in the JExpress subfolder of the eSubmitter application folder)

2. Add the proxy server settings to the line beginning with "args=" and before "-cp"

Example without proxy server settings:

args=-Dswing.aatext\=true -cp .\\JExpress\\JExpressUpdater.jar

Example with proxy server settings:

args=-Dswing.aatext\=true -Dhttps.proxyHost\=myhost.com -Dhttps.proxyPort\=1234 -cp .\\JExpress\\JExpressUpdater.jar
