

FDA FACT SHEET

FOODSHIELD COOPERATIVE AGREEMENT PROGRAM

Program Description

- FoodSHIELD is an online information sharing platform that was developed in cooperation with the Food Protection and Defense Institute (FPDI).
- It was built upon the CoreSHIELD architecture to enable the sharing of resources through food safety and defense portals, such as the Food Emergency Response Network (FERN) and the National Animal Health Laboratory Network (NAHLN).
- FoodSHIELD is a secure, web-based system offering a wide range of tools and resources to facilitate information sharing and communication between local, state and federal partners.
- The mission of FoodSHIELD is to provide an online environment that enables these partners to interact and function as a unified network.
- The program also facilitates food safety communication among other government agencies.
- FoodSHIELD is currently being funded and maintained through an FDA Cooperative Agreement awarded to the Association of Food and Drug Officials (AFDO).

Intended Outcomes

- FoodSHIELD encourages and enables the formation of workgroups, which serve as online communities to share information specific to a particular subject area or project.
- A workgroup can be composed of government representatives from the federal, state, and local levels, as well as non-government officials, including industry representatives, who are invited to a workgroup by a government representative.
- Workgroups are provided tools through FoodSHIELD that enable members across different regulatory jurisdictions and agencies to analyze, synthesize, coordinate, and integrate their ideas and efforts to address the vulnerability of the nation's food system.

Program Metrics:

- Current program funding: \$6M
- Current number of awards: 1
- Current partner: AFDO

The FDA, an agency within the U.S. Department of Health and Human Services, protects the public health by assuring the safety, effectiveness, and security of human and veterinary drugs, vaccines and other biological products for human use, and medical devices. The agency also is responsible for the safety and security of our nation's food supply, cosmetics, dietary supplements, and products that give off electronic radiation, and for regulating tobacco products.
