1. **DISCUSSION:** Discuss the efficacy of dry powder mannitol (DPM) for the proposed indication of the management of cystic fibrosis to improve pulmonary function in patients 18 years of age and older in conjunction with standard therapies. Include the following topics in your discussion:
   a. Effect on FEV\(_1\), including effect size and durability of effect
   b. Secondary endpoints, particularly exacerbations and the Cystic Fibrosis Questionnaire – Revised respiratory domain score
   c. Statistical persuasiveness

2. **DISCUSSION:** Discuss the safety data for DPM for the proposed use in patients with cystic fibrosis 18 years of age and older, particularly exacerbation and hemoptysis.

3. **VOTE:** Do the data provide substantial evidence of efficacy for DPM for the proposed indication of the management of cystic fibrosis to improve pulmonary function in patients 18 years of age and older in conjunction with standard therapies?
   a. If no, what further data are needed?

4. **VOTE:** Are the safety data adequate to support approval of DPM for the proposed indication of the management of cystic fibrosis to improve pulmonary function in patients 18 years of age and older in conjunction with standard therapies?
   a. If no, what further data are needed?

5. **VOTE:** Does the benefit-risk profile support approval of DPM for the proposed indication of the management of cystic fibrosis to improve pulmonary function in patients 18 years of age and older in conjunction with standard therapies?
   a. If no, what further data are needed?
