## Emergency Syringe Portfolio Supply Update

Dear Valued Customer,

Pfizer Hospital is committed to providing supply information so that customers can plan for patient care. While Pfizer continues to prioritize manufacturing enhancements for our Emergency Syringe portfolio, we want to provide clear expectations on the recovery dates and provide the current supply outlook to help you plan as needed until we are able to meet the full demand. We continue to ramp up production levels and have seen significant improvement in recent product releases.

It is important to note, the "next delivery" column found in the table (Appendix) below is the product release date from our manufacturing plant. Pfizer is shipping product weekly as part of our plan to maintain continuity of supply between plant releases and through recovery. Because of current demand levels customers may not see orders fulfilled or may see orders only partially filled. Customers are likely receiving a very limited supply on a monthly basis on products like *Epinephrine* and both *Dextrose 50% presentations*. We expect the distribution to improve as we continue to increase production towards the recovery dates, and want to provide transparency on what to expect today.

While Pfizer is making every effort to restock the market and provide product as quickly as possible, Pfizer is committed to ensuring high quality products for healthcare providers and their patients and will continue to keep you informed as new information becomes available.

The Supply Continuity Team can be contacted between 7 a.m. and 6 p.m. (CT) to discuss any product availability questions at 1-844-646-4398 (select option 1 [Customer], then option 3 [Supply Continuity Team]). Alternatively, you may reach out to your Pfizer Injectables sales representative or sales executive with questions.

Thank you,

Brian Pederson  
Portfolio Director, Opioids and Pre-filled Syringes
