Patient Self-Collection Kit and Collection Process SOP

Test package dispatched and sent via express carrier or USPS including:

| Instruction card | Spectrum SDNA-1000 Saliva Collection Device | Lab-Loc Specimen Bag for Biohazard | Alcohol Prep Pad | Overnight carrier overpack UN 3373 Biological Substance Category B |

1. Register for test

Register test with health care provider using 12-digit test ID located on the collection tube beneath the barcode.

2. Before performing collection, confirm the nearest USPS, FedEx, or UPS drop off location and hours of operation. Ship the sample on the same day as collection before the last pick up.

Wash hands before opening the test package. Do not eat, drink, smoke or chew gum within 30 minutes of the collection. Open test kit on a clean surface.

4. Open the package containing the SDNA-1000 saliva collection device. Perform the collection as per the instructions for use card and spit into the funnel until your saliva reaches the black line on the tube (2 ml). Remove funnel and screw on cap to release blue preservation agent into the tube. Shake the specimen for 5 seconds to mix preservative with sample. If needed a video that illustrates sample collection can be found at [link here]

5. Wash hands thoroughly again. Place specimen in the provided biohazard bag. Seal the biohazard bag by closing the zip lock seal. Wipe the bag with the provided alcohol wipe. Wash hands thoroughly again.

6. Place the biohazard bag into the return package. Remove the adhesive cover strip and seal the package closed. Wipe the package with the provided alcohol wipe.

7. Immediately deliver package to a USPS, FedEx or UPS drop box using the prepaid, pre-addressed return package. Ship the sample on the same day as collection before the last pick up.

Lab inspects package and logs specimen serial number upon receipt of package. Test results are delivered to health care provider identified by kit serial number. Results are reported to patient by healthcare provider.
Step 1: Fill the tube with saliva to the black wavy line.  
Fill the tube until your saliva (not including bubbles) is at or just above the wavy line. **DO NOT OVERFILL.**

Step 2: Replace the funnel with the fluid cap.  
Remove the funnel from the tube. Screw on the enclosed cap **TIGHTLY** to release the solution that will stabilize the DNA in your saliva.

Step 3: Firmly screw cap down to release the solution and seal tube.  
You will know it works when the blue solution from the cap is released into the tube. Firmly tighten cap to assure the cap and tube is completely sealed.

Step 4: Shake the tube for at least five seconds.  
This will ensure your sample mixes thoroughly with the stabilizing solution.

- **Cap choking hazard.** Keep out of reach of children. Wash with water if liquid solution comes in contact with eyes or skin. **DO NOT INGEST LIQUID.**
- **This kit is designed for the collection of human saliva samples. Made in USA, Patent Pending.**
- **For research use only. Not for use in diagnostic procedures.**

### Instructions in English:
- Fill the tube with saliva to the black wavy line.
- Fill the tube until your saliva (not including bubbles) is at or just above the wavy line. **DO NOT OVERFILL.**
- Replace the funnel with the fluid cap.
- Remove the funnel from the tube. Screw on the enclosed cap **TIGHTLY** to release the solution that will stabilize the DNA in your saliva.
- Firmly screw cap down to release the solution and seal tube.
- You will know it works when the blue solution from the cap is released into the tube. Firmly tighten cap to assure the cap and tube is completely sealed.
- Shake the tube for at least five seconds. This will ensure your sample mixes thoroughly with the stabilizing solution.

### Instructions in Spanish:
- Llene el tubo con saliva hasta la línea negra ondulada.
- Llene el tubo hasta que su saliva (sin considerar las burbujas) alcance o se encuentre justo sobre la línea ondulada. **NO LO LLENE EN EXCESO.**
- Reemplace el embudo por la tapa del líquido.
- Extraiga el embudo del tubo. Enrosque **FUERTEMENTE** la tapa adherida para liberar la solución que estabilizará el DNA en su saliva.
- Agite el tubo al menos cinco segundos.
- Esto garantizará que su muestra se mezcle bien con la solución estabilizante.

### Instructions in French:
- Remplissez le tube de votre salive jusqu'à la ligne ondulée noire.
- Remplissez le tube jusqu'à ce que votre salive (sans compter les bulles) atteigne au moins la ligne ondulée. **ÉVITER LES ÉVAPORATIONS.**
- Remplacez l'entonnoir par le bouchon.
- Enlever l'entonnoir du tube. Visser **FERMEMENT** le bouchon fourni pour libérer la solution qui stabilisera l'ADN dans votre salive.
- Visser fermement le bouchon en poussant vers le bas pour libérer la solution et fermer le tube.
- Vous saurez que cela aura fonctionné une fois que la solution bleue du bouchon aura été libérée dans le tube. Serrer fermement le bouchon pour assurer une fermeture bien étanche.
- Secouez le tube pendant au moins cinq secondes.
- Ceci permettra de bien mélanger votre échantillon avec la solution stabilisante.
