

Purified Saxitoxin for Food Safety Applications

Available for licensing as a biological material for research purposes is purified saxitoxin. Saxitoxin is the parent compound in a family of natural toxins that can occur in seafood and can cause food borne illness. Highly purified saxitoxin is vital for the development, validation, and calibration of detection methods for these toxins, as well as for fundamental studies in physiology and pain management. Interested parties may license the compound for conjugation chemistry and radiolabeling with the end goal of generating a research reagent.

Potential Commercial Applications

- Detection of food borne illness, toxins, and seafood contamination.
- Development, validation, and calibration of saxitoxin detection methods.
- Basis to produce reagents such as radiolabeled saxitoxin.

Competitive Advantages

- Higher purity saxitoxin with greater efficiency than other methods.

Development Stage: Research Material

Inventors: Sherwood Hall
