Will this test hurt? No, the nasal swab is not sharp and it should not hurt. Sometimes the swab can feel slightly uncomfortable or tickly.

What tips will help me use the nasal swab correctly? Collecting a good sample requires rolling or rubbing the swab around the inside walls of both nostrils. Making sure you are touching the inside walls of the nostrils is very important.

What are the known and potential risks and benefits of this test? Potential risks include:
• Possible discomfort during sample collection.
• Possible incorrect test results (see Read Results section).

Potential benefits include:
• The results, along with other information, can help your healthcare provider make informed recommendations about your care.
• The results of this test may help limit the spread of COVID-19 to your family and others in your community.

You have the option to refuse this test. However, your doctor has prescribed this test because they believe it could help with your care.

What if the display shows an invalid test result? This means something with the test did not work properly. If your test is invalid, all the lights will be blinking when the test is done in 30 minutes. If your test shows an invalid result, please contact us at 1-888-582-4724 and we will assist you.

How accurate is this test? The Lucira COVID-19 All-In-One Test Kit is a molecular in vitro diagnostic test that has an analytical sensitivity, or ability to detect the SARS-CoV-2 virus, that is comparable to some of the best molecular tests performed in clinical settings and high complexity labs.

In a Community Testing Study, where the Lucira test was compared to a FDA authorized known high sensitivity SARS-CoV-2 test, a 94% positive percent agreement (PPA) and a 98% negative percent agreement (NPA) was achieved. Excluding samples with very low levels of virus that possibly no longer reflected active infection, 100% positive percent agreement was achieved.

The above graph shows the Lucira COVID-19 All-In-One Test Kit positive percent agreement in the Community Testing Study. BLUE bars represent samples where the Lucira positive test result matched the comparison test result. GREY bars represent the Lucira test results that were negative and did not match the comparison test positive result. All of the GREY bars occurred in samples where there were very low levels of virus detected by the comparison test.

For the most up to date information on COVID-19, please visit: www.cdc.gov/COVID19
Instructions - Start Here

1 Set Up Test

- Choose a location to do this test where it can sit UNDISTURBED for 30 minutes.
- Please read all instructions carefully before you begin.
- Do not insert batteries into test unit until ready to perform test.
- Make sure your test kit contains: 2 AA batteries, test unit (pouch 1), sample vial (pouch 2), swab (labeled 3), and plastic disposal bag.
- Wash and dry hands.

2 Swab Both Nostrils

- Open battery door and insert batteries. Check that Ready light is on.
- Open sample vial pouch 2. REMOVE sample vial seal.

3 Stir Swab and Run Test

- Insert swab into the sample vial until it touches the bottom.
- Mix sample by stirring around the sample vial 15 times.
- Discard swab.

4 Read Result

- Snap cap closed and press vial down into test unit until it clicks.
- Ready light will start blinking when test is running.
- If Ready light is not blinking within 5 seconds, use palm of your hand to press down more firmly to start test.
- Do not move test unit once the test has started running.
- Wait 30 minutes.

5 Dispose of Test Kit

- After test is completed, place the test unit in plastic disposal bag and dispose all test kit materials in trash.

For this test to work properly, it is important you swab BOTH nostrils.

- Remove swab and hold with handle end. Do not set swab down.
- Tilt head back and gently insert swab tip until it is fully inside your/patient nostril and you meet resistance.
- Once swab tip is fully inside nostril, roll the swab 5 times around the inside walls of your nostril. The swab should be touching the walls of the nostril as you rotate.
- Repeat swab step in other nostril.

If Ready light is not blinking within 5 seconds, use palm of your hand to press down more firmly to start test.

If you test POSITIVE

- It is very likely you have COVID-19 and it is important to be under the care of a healthcare provider. It is likely you will be asked to isolate yourself at home to avoid spreading the virus to others. There is a very small chance that this test can give a positive result that is wrong (a false positive). Your healthcare provider will work with you to determine how best to care for you based on your test results along with medical history and your symptoms.

If you test NEGATIVE

- A negative result means the virus that causes COVID-19 was not found in your sample. If you took this test while you have symptoms, a negative test result usually means that your current illness was not caused by COVID-19. However, it is possible for this test to give a negative result that is incorrect (a false negative) in some people with COVID-19. This means you could possibly still have COVID-19 even though the test is negative. If this is the case, your healthcare provider will consider the test result with all other aspects of your history such as symptoms and possible exposures to decide how to care for you. It is important you work with your healthcare provider to help you understand the next steps you should take.

If you test INVALID

- Please share your test result with your healthcare provider. The bottom panel of the test kit box has a photo guide that can be used to share your results.

Another important thing to remember: If you test POSITIVE you should isolate yourself from others.

Another important thing to remember: If you test NEGATIVE you should keep doing what you were doing before you took the test.
