RESEARCH ACTIVITIES

Research Focus

My core area of research addresses the area of diabetes and aging, particularly accelerated muscle loss and physical function disability in older adults with diabetes. My work in frailty includes studies of metabolic dysregulation in hormones of energy metabolism and the relationship to diabetes. I have also investigated sex differences in diabetes and its complications and sex differences in the attainment of independent research funding (i.e. R01 awards) among career development awardees. My studies in diabetes education have identified critical gaps in physicians' knowledge related to diabetes.
