The FDA is committed to helping ensure the public has access to a wide variety of test options for COVID-19. Since the start of the pandemic, we have authorized over 300 tests and collection kits, including:

- **235** Molecular tests
- **63** Antibody tests
- **11** Antigen tests

**SUCH AS:**

- **38** Home Collection tests: Tests and collection kits where samples are collected at home and sent to a lab for processing.
- **18** Pooling tests: Tests that process samples from multiple people at one time.
- **17** Point-of-Care tests: Tests that rapidly return a result at your doctor’s office or other health care setting.
- **11** Multi-Analyte tests: Tests that detect the virus that causes COVID-19 as well as other viruses like flu.
- **3** At-Home tests: Tests performed at home with a self-collected sample.

Current as of 12/28/2020
