Influenza Virus Vaccine Strain Selection 2021-2022 Northern Hemisphere

Vaccines and Related Biological Products Advisory Committee (3/5/2021)

Jerry P Weir, PhD, Director Division of Viral Products/OVRR/CBER/FDA
Purpose of Today’s VRBPAC Committee Discussion

- Review influenza surveillance and epidemiology data, genetic and antigenic characteristics of recent virus isolates, serological responses to current vaccines, and the availability of candidate vaccine strains and reagents

- Make recommendations for the strains of influenza A (H1N1 and H3N2) and B viruses to be included in 2021-2022 influenza vaccines licensed for use in the United States
Types of Analyses Used for Vaccine Strain Selection

• Epidemiology of circulating strains
  – Surveillance data from U.S. and around the world

• Antigenic relationships among contemporary viruses and candidate vaccine strains
  – Hemagglutination inhibition (HI) or Microneutralization (MN) tests using post-infection ferret sera
  – HI or MN tests using panels of sera from humans receiving recent influenza vaccines
  – Antigenic cartography
  – Phylogenetic analyses of HA and NA genes
  – Vaccine effectiveness
Previous Recommendations for Northern Hemisphere Influenza Vaccines – 2020-2021

- VRBPAC recommendation for the antigenic composition of the 2020-2021 influenza virus vaccines in the U.S. (March 4, 2020)
  - Influenza A (H1N1)
    - an A/Guangdong-Maonan/SWL1536/2019 (H1N1)pdm09-like virus (Egg-based Vaccines)
    - an A/Hawaii/70/2019 (H1N1)pdm09-like virus (Cell- or Recombinant-based Vaccines)
  - Influenza A (H3N2)
    - an A/Hong Kong/2671/2019 (H3N2)-like virus (Egg-based vaccines)
    - an A/Hong Kong/45/2019 (H3N2)-like virus (Cell- or recombinant-based vaccines)
  - Influenza B (for trivalent and quadrivalent vaccines)
    - a B/Washington/02/2019-like virus (B/Victoria lineage)
  - Influenza B (for quadrivalent vaccines containing the above 3 virus strains)
    - a B/Phuket/3073/2013-like virus (Yamagata lineage)
WHO Recommendations for 2021-2022 Northern Hemisphere Influenza Vaccine

- WHO recommendation – February 26, 2021
- Recommended that vaccines for use in the 2021 - 2022 northern hemisphere influenza season contain the following:
  - Influenza A (H1N1)
    - an A/Victoria/2570/2019 (H1N1)pdm09-like virus (Egg-based Vaccines)
    - an A/Wisconsin/588/2019 (H1N1)pdm09-like virus (Cell- or Recombinant-based Vaccines)
  - Influenza A (H3N2)
    - an A/Cambodia/e0826360/2020 (H3N2)-like virus
  - Influenza B (for trivalent and quadrivalent vaccines)
    - a B/Washington/02/2019-like virus (B/Victoria lineage)
  - Influenza B (for quadrivalent vaccines containing the above 3 virus strains)
    - a B/Phuket/3073/2013-like virus (Yamagata lineage)
Committee Discussion

• Which influenza strains should be recommended for the antigenic composition of the 2021-2022 influenza virus vaccine in the U.S.?
Options for Strain Composition for 2021-2022 Influenza Vaccines

- **Influenza A (H1N1)**
  - Recommend an A/Victoria/2570/2019 (H1N1)pdm09-like virus for egg-based vaccines
  - Recommend an A/Wisconsin/588/2019 (H1N1)pdm09-like virus for cell- or recombinant-based vaccines
  - Recommend alternative H1N1 candidate vaccine viruses
- **Influenza A (H3N2)**
  - Recommend an A/Cambodia/e0826360/2020 (H3N2)-like virus
  - Recommend alternative H3N2 candidate vaccine viruses
- **Influenza B (for trivalent and quadrivalent vaccines)**
  - Recommend a B/Washington/02/2019-like virus (B/Victoria lineage)
  - Recommend an alternative candidate vaccine virus from the B/Victoria lineage
  - Recommend a candidate vaccine virus from the B/Yamagata lineage
- **Influenza B (2\textsuperscript{nd} B strain for quadrivalent vaccines containing the above 3 viruses)**
  - Recommend a B/Phuket/3073/2013-like virus (Yamagata lineage)
  - Recommend an alternative candidate vaccine virus from the B/Yamagata lineage
  - Recommend a candidate vaccine virus from the B/Victoria lineage

Voting Questions for the Committee

1) For the influenza A (H1N1) component of the 2021-2022 influenza virus vaccines in the U.S., does the committee recommend:
   - An A/Victoria/2570/2019 (H1N1)pdm09-like virus for egg-based vaccines
   - An A/Wisconsin/588/2019 (H1N1)pdm09-like virus for cell- or recombinant-based vaccine

2) For the influenza A (H3N2) component of the 2021-2022 influenza virus vaccine in the U.S., does the committee recommend:
   - An A/Cambodia/e0826360/2020 (H3N2)-like virus

3) For the influenza B component of the 2021-2022 trivalent and quadrivalent influenza virus vaccines in the U.S., does the committee recommend inclusion of a B/Washington/02/2019-like virus (B/Victoria lineage)

4) For quadrivalent 2021-2022 influenza vaccines in the U.S., does the committee recommend inclusion of a B/Phuket/3073/2013-like virus (B/Yamagata lineage) as the 2\textsuperscript{nd} influenza B strain in the vaccine
