

3/5 Voting Questions:

1) For the influenza A (H1N1) component of the 2021-2022 influenza virus vaccines in the U.S., does the committee recommend:

- An A/Victoria/2570/2019 (H1N1)pdm09-like virus for egg-based vaccines
- An A/Wisconsin/588/2019 (H1N1)pdm09-like virus for cell- or recombinant-based vaccine

2) For the influenza A (H3N2) component of the 2021-2022 influenza virus vaccine in the U.S., does the committee recommend:

- An A/Cambodia/e0826360/2020 (H3N2)-like virus

3) For the influenza B component of the 2021-2022 trivalent and quadrivalent influenza virus vaccines in the U.S., does the committee recommend inclusion of a B/Washington/02/2019-like virus (B/Victoria lineage)

4) For quadrivalent 2021-2022 influenza vaccines in the U.S., does the committee recommend inclusion of a B/Phuket/3073/2013-like virus (B/Yamagata lineage) as the 2nd influenza B strain in the vaccine
