**Five-Year Plan Overview**

**A. Scope**

The purpose of the Five-Year Financial Plan is to communicate the anticipated financial position of the Biosimilar User Fee Amendments of 2017 (BsUFA II) program over the current five-year authorization period, and to communicate how FDA plans to utilize user fee resources to execute the BsUFA II commitments and to continue building the biosimilars review program. This document addresses the plan for implementation and use of BsUFA user fees by the Food and Drug Administration (FDA or the Agency) during the period of October 1, 2017, through September 30, 2022.

**B. Five-Year Plan Commitments**

In accordance with *Biosimilar Biological Product Reauthorization Performance Goals and Procedures Fiscal Years 2018 through 2022*, Section IV.B, FDA will publish a BsUFA five-year financial plan no later than the second quarter of fiscal year (FY) 2018. FDA will publish updates to the five-year plan no later than the second quarter of each subsequent fiscal year. The purpose of this document is to meet these commitments.

**C. Updates to the Five-Year Plan**

All estimates in the plan are subject to review and reassessment each fiscal year as the actual amounts for appropriations, obligations, and collections for the previous year become available. The five-year financial plan provides the baseline from which future changes will be made. Updates to the five-year financial plan will occur on an annual basis, and cover the 5 years in the current reauthorization period.

**Management Discussion**

**D. Organization Background**

FDA is responsible for protecting public health by ensuring the safety, efficacy, and security of human and veterinary drugs, biological products, and medical devices and by ensuring the safety of our nation's food supply, cosmetics, and products that emit radiation. FDA also has responsibility for regulating the manufacturing, marketing, and distribution of tobacco products. FDA is responsible for advancing the public health by helping to speed innovations that make medical products more effective, safer, and more affordable and by helping the public get accurate, science-based information needed to use medical products and consume foods to maintain and improve their health. FDA similarly plays a significant role in the nation's counterterrorism capability.

**Program Organization**

There are four major components that support the BsUFA program: the Center for Drug Evaluation and Research (CDER), the Center for Biologics Evaluation and Research (CBER), the Office of Regulatory Affairs (ORA), and Headquarters (HQ).

**Exhibit 1** provides an overview of the mission for each of these components.
### Exhibit 1: User Fee Program Components

<table>

</tr>
<tr>
<td>HQ</td>
<td>Provides FDA-wide program direction and administrative services to ensure FDA's consumer and patient safety programs are effectively and efficiently managed.</td>
</tr>
</tbody>
</table>

### User Fee Governance

The Agency’s expanding level of user fees, the reporting of agency performance commitments associated with these fees, and the need for FDA to convey how these fees are executed calls for strong financial governance. This includes an understanding of the design of these programs, clear financial plans, data-driven decisions on resource allocation, consistency and transparency about assumptions, reliable financial forecasting, and accountability for resources spent.

FDA’s user fee governance process leverages the User Fee Financial Management Committee (UFFMC), which consists of senior financial, business operations, and program experts across the agency who evaluate user fee resource needs, develop financial allocation plans, and forecast resource requirements – both programmatic and administrative – to support user fee financial decisions. The UFFMC is responsible for providing oversight and support of appropriate standards and policies to ensure FDA compliance with sound financial management practices, as well as compliance with statutory provisions that authorize FDA to collect and spend user fees. The UFFMC receives policy guidance and strategic direction directly from FDA’s Executive Committee relative to how the Agency will forecast and react to industry trends, plans and manages its research agenda in support of the user fee programs, and forecasts its user fee workload. The UFFMC advises the Executive Committee and other Center- and Office-level bodies on a variety of financial and performance related topics.

### E. User Fee Background and Structure

Under the BsUFA program, FDA collects user fees from the biosimilar biological product manufacturers to fund the biosimilar biological product review process. The Federal Food, Drug and Cosmetic Act (the FD&C Act), as amended by BsUFA, authorizes FDA to collect fees from industry to supplement non-user fee appropriations that the Agency spends on the process for the review of biosimilar biological product applications.

The FDA Reauthorization Act of 2017 (FDARA) includes the reauthorization of BsUFA, also known as BsUFA II, which extends from October 1, 2017 through September 30, 2022. The five-year reauthorization authorizes continued funding for FDA from FY 2018 through FY 2022 to support the efficiency and effectiveness of the biosimilar biological product review program. BsUFA II continues to enhance FDA’s capacity to facilitate timely access to safe and effective biosimilar medicines for patients.

FDA spends BsUFA user fee collections and non-user fee appropriations to hire, support, and maintain personnel for the review of biosimilar biological product applications to help ensure that safe and effective biosimilar biological products are available to the American public.

BsUFA II establishes an efficient user fee structure comprised of initial and annual biosimilar biological product development (BPD) fees, reactivation fees, biosimilar biological product application fees, and
biosimilar biological product program fees. The structure is intended to enhance predictability of funding, reduce administrative inefficiency, and improve management of funding.

Exhibit 2 outlines the BsUFA II user fee structure.

### Exhibit 2: BsUFA II Fee Structure

<table>
<thead>
<tr>
<th>Fee Type</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Biosimilar Biological Product Development (BPD)</strong></td>
<td><strong>Initial</strong> Initial BPD fee is a one-time fee that is assessed to a sponsor to enter the BPD program.</td>
</tr>
<tr>
<td></td>
<td><strong>Annual</strong> Beginning in the next fiscal year after a sponsor has paid the initial BPD fee, the sponsor must pay an annual fee for the product in each fiscal year.</td>
</tr>
<tr>
<td></td>
<td><strong>Reactivation</strong> A sponsor that has discontinued participation in the BPD program for a product and seeks to resume participation in the BPD program for the product must pay a reactivation fee.</td>
</tr>
<tr>
<td><strong>Application</strong></td>
<td><strong>With Clinical Data</strong> A biosimilar biological product application for which clinical data (other than comparative bioavailability studies) with respect to safety or effectiveness are required for approval is assessed a full application fee when the application is submitted.</td>
</tr>
<tr>
<td></td>
<td><strong>Without Clinical Data</strong> A biosimilar biological product application for which clinical data (other than comparative bioavailability studies) with respect to safety or effectiveness are not required for approval is assessed one-half of a full application fee.</td>
</tr>
<tr>
<td><strong>Program</strong></td>
<td>Biosimilar biological product program fees are assessed annually for eligible products.</td>
</tr>
</tbody>
</table>

The statute specifies how the fees must be calculated each fiscal year, including annual adjustments that must be made for inflation. The fee amounts are to be published in the Federal Register each year; this typically occurs at the beginning of August (BsUFA User Fee Rates Archive).

BsUFA user fees collected are not a fee-for-service. The user fees that are collected are pooled and may be used for the allowable activities as set forth in the FD&C Act. Refer to Appendix A for a detailed list of allowable and excluded activities.

Appendix B provides more information on the history of the user fee program.

### F. Forward View

**Discussion of Workload and Other activities in BsUFA**

At the beginning of BsUFA I, the regulatory pathway for biosimilar biological products was relatively new in the U.S. and thus much of FDA’s work was focused on providing development-stage advice to sponsors of biosimilar biological products through FDA’s BPD Program. During BsUFA I, FDA received fewer original biosimilar biological product application submissions than the Agency had initially expected to receive, which resulted in the collection of relatively more BPD fees than expected and fewer application, establishment, and product fees. This unexpected higher distribution of fee collections from historically more volatile revenue sources (e.g., BPD fees), in addition to challenges in hiring staff for the program and uncertainty meeting the non-user fee spending trigger provisions, contributed to a greater than expected carry-over balance at the end of BsUFA I. Many of the development programs started in BsUFA I have continued to convert to original submissions in BsUFA II, contributing to an increase in application review work relative to BsUFA I. Furthermore, the number of development programs and number of reference products for which proposed biosimilars are being developed have increased over the course of BsUFA II and is expected to increase further with the transition of biological products that had been approved under new drug applications (e.g. insulin) to biologics license applications (BLAs). Specifically, on March 23, 2020, as required by the Biologics Price
Competition and Innovation Act of 2009 (BPCI Act), approved marketing applications for biological products under section 505 of the FD&C Act were deemed to be approved biologics license applications under section 351 of the Public Health Service Act. Additionally, FDA expects that the accruing number of approved biosimilar biological product applications will generate an exponential number of supplements to such applications.

In the BsUFA II commitment letter, FDA committed to enhancing capacity for biosimilar regulations and guidance development, reviewer training, and timely communication as well as strengthening staff capacity to deliver information concerning the date of first licensure and the reference product exclusivity expiry date, to be included in the Purple Book. As committed, through the first 3 years of BsUFA II, FDA has enhanced capacity for addressing these important elements. This occurred through the growth of the Therapeutic Biologics and Biosimilars Staff, and its reorganization into the Office of Therapeutic Biologics and Biosimilars. By increasing the number of staff dedicated to biosimilar activities during BsUFA II, FDA has been able to accomplish many significant desired milestones, including finalization of almost all guidance documents specified in the BsUFA II commitment letter, modernization of the Purple Book with an enhanced and user-friendly interface, and creation of an integrated multidisciplinary review template to enhance review consistency. Furthermore, FDA has expanded on education and outreach efforts during BsUFA II, creating new materials, webinars, and increasing attendance at outreach events. As the number of biosimilar biological products available on the market increases, and more stakeholders have the opportunity to use biosimilar products, outreach and education will be fundamental to facilitating an accurate understanding of these products and their acceptance and use among key stakeholders.

Looking forward through FY 2022 and the end of BsUFA II, FDA will continue its focus on improving the efficiency of the biosimilar product development and approval process; maximizing scientific and regulatory clarity for the biosimilar product development community; developing effective communications to improve understanding of biosimilars among patients, clinicians, and payors; and supporting market competition by reducing gaming of FDA requirements or other attempts to unfairly delay competition. Activities may include regulatory science projects to support the efficient development and review of biosimilar biological product applications, increasing review support for certain types of biosimilar labeling supplements, enhancing capacity for regulation and guidance development, and continued expansion of outreach and education efforts.

FDA completed its BsUFA II hiring commitment in FY2020. FDA is also working to improve the Agency’s ability to attract, hire, and retain the top scientific talent that is needed for the review of biosimilar biological product applications. This includes delivering on a BsUFA II commitment to establish a dedicated function to enhance hiring and retention of scientific staff, and also includes FDA’s implementation of a new pay authority provided by the 21st Century Cures Act (Cures). FDA intends to utilize user fee resources to build staff capacity for its Office of Therapeutic Biologics and Biosimilars, establish the new scientific staffing capability, and implement the new pay authority provided by Cures.

**Changes to Fee Structure and Fee-Setting Mechanisms in BsUFA II**

The changes to the BsUFA II fee structure discussed in Section E are expected to improve the stability and predictability of funding, improve efficiency by simplifying the administration of user fees, and enhance flexibility of financial mechanisms to improve management of BsUFA program funding. Nonetheless, as the biosimilar biological product industry continues to mature, FDA does anticipate

---

uncertainty in year to year cash collections, workload, and associated costs during BsUFA II. As such, FDA and Industry recognized the need to take a flexible approach to managing the program finances to ensure stable FDA funding and sponsor fee levels. This flexible approach includes:

- The application of a capacity planning adjustment, first implemented for the setting of FY 2021 fee amounts, which is discussed in greater detail later in this section, to adjust the target revenue to keep pace with sustained increases in program workload.
- An operating reserve adjustment when setting fees each fiscal year so that FDA may adjust the annual target revenue to utilize the program’s carryover balance to minimize fluctuations in sponsor fee amounts and manage volatility in fee collections.

In addition to using the carryover balance to manage fluctuations in fee amounts and volatility in fee collections, FDA also intends to use it to sustain operations if there is a lapse in appropriations, and to build review capacity to manage a potential increase in workload in BsUFA II, as needed.

Because of the uncertainty in program workload and the flexible financial approach to mitigate that uncertainty, FDA acknowledges there are inherent challenges in estimating the target revenues, cash collections, obligations, and carryover balances for each fiscal year in this plan. FDA’s focus over the remainder of BsUFA II is to continue building sufficient staff capacity to deliver on program performance and procedural goals, as outlined in the BsUFA II commitment letter.

**Efforts to Enhance Financial Management**

Under BsUFA II, FDA made commitments to establish a resource capacity planning function and to modernize its time reporting approach. CDER and CBER have now implemented modernized time reporting and have also established the foundational resource capacity planning capability. This capability will continue to mature over the coming years as more data is collected and workload forecasts are continually refined. This will enable better forecasting of workload and the ability to translate forecasts into more targeted human resource and financial needs, helping to ensure FDA has the resources it needs to deliver on all its performance commitments in BsUFA II.

With the foundational resource capacity planning capability now in place, FDA has implemented the new capacity planning adjustment methodology. 

2 This methodology adjusts the annual target revenue amount to account for the resources needed to respond to projected sustained changes in program workload. FDA implemented the capacity planning adjustment methodology through the process set forth in statute which included a third-party evaluation and a review of public comments on the evaluation. FDA also made commitments in BsUFA II to enhance efficiency and transparency in the administration of BsUFA’s financial resources. This included a third-party evaluation of BsUFA program resource management during FY 2018.

3 It also included the publishing of a five-year plan (this plan), to be updated annually. FDA also has held annual public meetings to discuss this five-year financial plan and report on the contribution of the BsUFA spending trigger to the BsUFA program, along with the

---

3 https://www.fda.gov/media/136606/download
Agency’s progress in implementing resource capacity planning, modernized time reporting, and the modernized user fee structure.  

Working Capital Fund/Cost Allocation

FDA has a Cost Allocation and Recovery framework to improve financial management of user fee resources for BsUFA, the Prescription Drug User Fee Act (PDUFA), and the Generic Drug User Fee Amendments (GDUFA). Congress authorized FDA to establish a Working Capital Fund (WCF) to finance centralized services (see P.L. 115-141). The WCF benefits the financial management of Agency funds by:

- Increasing transparency through defining administrative activities performed for Centers and Offices and allocating costs based on Agency usage.
- Strengthening accountability by improving the tracking and management of administrative costs, including costs charged to user fees for administrative services.
- Promoting efficiency by optimizing customer usage and improving the management of user fee administrative costs over time.
- Leveraging the WCF governance structure to ensure FDA leadership engagement in decision making relative to administrative costs, efficiency opportunities, recapitalization, and burden on all funding sources – including user fees.

Financial Information

This section provides an overview of the projected financial outlook for BsUFA through the FY 2018 – FY 2022 reauthorization period. These projections include user fee revenue, obligations, carryover, non-user fee appropriations requirements, and planned hiring. The forecasts included in this section are driven by the initiatives and goals as outlined in the Forward View section of this plan. Refer to prior year BsUFA Five-Year Financial Plans for additional information on prior year estimates.

G. User Fee Program Financials

Table 1 represents a summary of the forecasted BsUFA financial position, as it relates to user fee resources (collections and carryover). This table also provides an overview of planned obligations for which the user fee resources would be used. Future updates to this plan will supplement the financial estimates with actual amounts received, obligated, and carried over for the past fiscal year. The financial notes can be found in Appendix C.

Table 1: Biosimilar Biological Product Collections, Obligations, and Carryover for Fiscal Year 2018 through Fiscal Year 2022

Target Revenue has been rounded to the nearest thousand dollars.
All other numbers have been rounded to the nearest dollar.
† Indicates an actual amount.

**Budgetary Resources:** The budgetary resources component of Table 1 illustrates the FY 2018 through FY 2020 actuals and the forecast for FY 2021 and FY 2022 for the sum of available user fee funding (i.e., the existing carryover balance available for use and additional projected user fee collections) that are available to fund obligations. The target revenue is the annual revenue amount established when fees for the fiscal year are set. Cash collections are the actual amount collected during the fiscal year and are forecasted to be equal to the target revenue. BsUFA II specifies how the fees must be calculated each fiscal year, including annual adjustments (e.g., for inflation and changes in workload).

For the purposes of this plan, future year recoveries are estimated to be $600,000 annually. Additional details on recoveries are included in Note 2.

**Obligations:** The obligations component of Table 1 shows the FY 2018 through FY 2020 actual expenditure and planned annual expenditure for FY 2021 and FY 2022 of BsUFA fee funds broken out into major expense categories. BsUFA fees may be expended only for costs to support the “process for the review of biosimilar biological product applications,” as defined in BsUFA II.

With the onset of the coronavirus disease (COVID-19) in the United States during FY 2020, CDER and other parts of the FDA reprioritized staff time to support critical COVID-19-related efforts. Concurrently, FDA received fewer submissions to the BsUFA program than expected for FY 2020, which reduced overall program workload. This necessary reprioritization of staff time coupled with the decrease in submissions resulted in less staff time spent on the BsUFA program compared to FY 2019. Accordingly, in FY 2020, FDA reduced BsUFA fee expenditures on staff payroll costs commensurate with the reduction in staff time spent on the program. FDA expects to increase user fee obligations each year through the remainder of BsUFA II to build staff and operational capacity to manage review workload and deliver on performance and procedural goals.
**Carryover:** BsUFA fees are available until expended. This means that the fees that are collected, appropriated, and not obligated at the end of the fiscal year remain available to FDA for use in future fiscal years. The unobligated BsUFA funds at the end of each fiscal year are referred to as the “carryover balance” of Table 1. Maintaining an appropriate level of carryover enables FDA to mitigate financial risks to the program, including, for example, the risk of under collecting fees and the risk of a lapse in appropriations.

## H. User Fee Revenue

**Table 2** outlines the estimated annual target revenue amounts for each fiscal year. The financial notes referenced in this table can be found in Appendix C.

FDA assumes, for planning purposes, that cash collections will equal the target revenue amount. Cash collections may differ from the annual target revenue amount if the actual number of fee-paying units differ from the number of fee-paying units estimated when fees are set each year.

Annual updates to this plan will update the actual revenue amount for the current fiscal year and the actual collections amount from the preceding fiscal years.

† Indicates an actual amount

The base revenue for FY 2018 is specified in statute. The base revenue for each subsequent year is equal to the prior year’s total target revenue amount, excluding any operating reserve adjustment for the prior year. See Note 1 for a diagram of this process.

The process for setting of the annual target revenue is defined in statute. Each year’s base revenue is adjusted for the following factors, as applicable:
• **Inflation Adjustment:** The inflation adjustment adjusts the base revenue to maintain the purchasing power of fee funds in consideration of inflation. The adjustment is a composite measure that weights operating expenses by changes in the Consumer Price Index (CPI) and payroll-related expenses by changes in FDA’s average personnel compensation and benefits amounts.

The inflation adjustment for future years, for the purposes of this plan, is estimated by using the Federal Reserve Bank of Cleveland’s CPI projections, as well as historical averages of the changes in FDA’s average salary and benefits amounts.

An inflation adjustment was not utilized in FY 2018; the actual inflation adjustment utilized in FY 2019, FY 2020, and FY 2021 was 1.8239, 2.3821, and 1.3601 (rounded) percent, respectively. The inflation adjustment for FY 2022 is estimated at 1.9316 percent.

• **Capacity Planning Adjustment:** The capacity planning adjustment adjusts the inflation-adjusted base amount to reflect changes in the resource capacity needs of the BsUFA program.

Section F above, as well as the references provided in that section, describe the implementation and mechanisms of the capacity planning adjustment.

• **Operating Reserve Adjustment:** The operating reserve adjustment was established in statute to provide a mechanism to support the management of the carryover balance from year to year.

FDA is committed to reducing the BsUFA carryover balance to an amount that is no greater than 21 weeks of operating reserves by the end of FY 2022. The operating reserve adjustment provides a tool to help manage to this amount. Beginning in FY 2019, FDA may use the operating reserve adjustment to lower the annual target revenue in order to help manage to the committed carryover balance level. In support of this commitment, FDA determined that it would apply an operating reserve adjustment to lower the FY 2019 target revenue amount by $2,100,000. This established an adjusted FY 2019 BsUFA fee revenue amount of $38,847,000 (rounded to the nearest thousand dollars). For FY 2020 and FY 2021, FDA determined that it would not apply an operating reserve adjustment to lower the target revenue amount as FDA appeared on track to reduce the carryover reserve to the committed level.

Because the capacity planning adjustment is now effective, FDA may also utilize the operating reserve adjustment to increase the annual target revenue amount. This upward adjustment may not be made to provide for an increase that would result in a carryover balance of more than 21 weeks. FDA does not foresee the need to utilize this upward adjustment in BsUFA II, however, this is an option in FY 2022 should the financial outlook change.

Should FDA make an operating reserve adjustment, either up or down, FDA must explain its rationale in the annual fee-setting Federal Register notices.

• **FY 2018 Adjustment:** The FY 2018 adjustment enabled FDA to adjust the base revenue set for BsUFA II based on its best and most timely available workload estimates at the time the FY 2018 fees were to be set. Refer to Note 6 for additional details.

FDA adjusts the allocation of each fee type to the total target revenue each year to minimize variation in the fee amount from year to year. For FY 2020, fee rates were established to equal the following allocation: application fees provide 42 percent of the total revenue, biosimilar biological product program fees provide 30 percent of the total revenue, and BPD fees provide 28 percent of the total revenue. For FY 2021, fee rates were established to equal the following allocation: application fees
provide 33 percent of the total revenue, biosimilar biological product program fees provide 39 percent of the total revenue, and BPD fees provide 28 percent of the total revenue. User fee collections are recognized and reported in the year the fee was originally due (referred to as the “cohort year”). Totals reported for each fiscal year are net of any refunds for the cohort year. Table 3 presents the forecasted and actual total annual collections by fee type and cohort year.

</tbody>
</table>

Numbers have been rounded to the nearest dollar

Total obligations include payroll and operating, rent, and shared services costs. The details of each component of total obligations are as follows:

- **Payroll and Operating**: These obligations provide for all payroll and operating costs that support the allowable activities for which BsUFA fees may be expended, as set forth in statute. Appendix A provides additional information regarding allowable and excluded costs for the BsUFA program. The actual payroll and operating costs were lower than anticipated in FY 2020. This was due to lower workload than anticipated and impacts resulting from the COVID-19
pandemic. Fluctuations in the workload of the program can increase the uncertainty of meeting the annual non-user fee spending trigger. When experiencing this uncertainty, the Agency reduces the amount of user fee funds obligated, and increases the amount of non-user fee funds obligated, to help ensure that it meets the annual non-user fee spending trigger.

- **Rent**: This is paid to the General Services Administration (GSA) for the Federal buildings that FDA occupies, as well as to non-Federal sources for direct leases and services (see Note 4). Rent is charged at different rates depending on the type and location of the space provided. The future year amounts, for the purposes of this plan, are assumed to have an increase of 1 percent yearly.

- **Shared Services**: FDA has several shared service organizations that provide support across the user fee programs, such as human resources and IT. Shared services at FDA are located within the WCF. The future year amounts, for the purposes of this plan, are assumed to have an increase of 1 percent yearly. Yearly costs are determined by the Cost Allocation and Recovery framework discussed previously. In FY 2020, the WCF absorbed several offices that were previously located within HQ. This change is responsible for the variance in HQ and Shared Services from the original plan, published in FY 2018, for FY 2020 and beyond. Note 5 provides a full list of the what is contained in the WCF.

Variances occurred between the original FY 2020 plan and the actuals in some areas:

- **CBER Obligations**: Actual CBER obligations in FY 2020 were lower than estimated due to a lower amount of workload than anticipated. BsUFA funding will not be utilized other than for costs of the process for the review of biosimilar biological product applications (see Appendix A for additional information regarding allowable and excluded costs for the BsUFA program) and will depend on the workload at the Center. The planned obligations for CBER in FY 2021 through FY 2022 have been reduced to reflect lower workload.

- **CDER Obligations**: Actual CDER obligations in FY 2020 were lower than estimated due to a lower amount of workload than anticipated and due to impacts resulting from the COVID-19 pandemic. BsUFA funding will not be utilized other than for costs of the process for the review of biosimilar biological product applications (see Appendix A for additional information regarding allowable and excluded costs for the BsUFA program) and will depend on the workload at the Center.

- **HQ Obligations**: Actual HQ obligations were lower in FY 2020 due to transfers into the WCF as well as returns from specific offices that were unable to hire. These offices continue to make efforts to bring new hires on board.

- **ORA Obligations**: Actual ORA obligations in FY 2020 were lower than estimated due to a lower amount of inspectional workload than anticipated.

- **Rent**: The variances in rent actuals for FY 2020 were due to a lower rent bill than anticipated. While small fluctuations are common, FDA does not anticipate large variances in the Rent account in future fiscal years.

Exhibit 3 below provides an illustration of historical BsUFA obligations and projected FY 2021 through FY 2022 needs.
As noted in the Forward View section, early in BsUFA I (FY 2013 – FY 2017) FDA received fee collections from historically more volatile revenue sources (e.g., BPD fees), experienced challenges in hiring staff for the program, and faced uncertainty in meeting the non-user fee spending trigger provisions, all of which contributed to limited spending of user fee funds. However, as workload increased during BsUFA I, along with greater certainty of making the non-user fee spending trigger amount, FDA increased user fee obligations to enhance staff and operational capacity for the program. Workload fluctuations again contributed to uncertainty of meeting the non-user fee spending trigger amount in FY 2020, resulting in the shifting of some obligations to non-user fee funds.

FDA expects to increase user fee obligations each year through the remainder of BsUFA II to build staff and operational capacity to manage review workload and deliver on performance and procedural goals. This is subject, however, to fluctuations in the workload of the program.

### J. User Fee Carryover

BsUFA fees collected, appropriated, and not obligated at the end of the fiscal year remain available to support the BsUFA program in future fiscal years. This balance is referred to as the BsUFA carryover.

Maintaining an appropriate level of carryover enables FDA to mitigate financial risks to the program, including for example, the risk of under collecting fees and the risk of a lapse in appropriations. FDA considers the reasonable range of carryover for the BsUFA program to maintain in anticipation of these risks to be about 21 weeks. FDA notes that this reasonable range is higher for BsUFA than for PDUFA or GDUFA. This is because BsUFA is a much smaller program, as measured by workload or planned expenditures, and small shifts in submissions could have a significant impact on workload and the requisite funding needed to maintain operations.

---

7 BsUFA I established a non-user fee spending trigger amount of $20,000,000 (see Section K), to be adjusted for inflation each year. In the early years of BsUFA I, the total financial size of the program was relatively small and uncertain from year to year. For this reason, FDA took a conservative approach to spending user fee revenue. When fluctuations create uncertainty in meeting the trigger provision, FDA intends to continue to be conservative with the outlay of user fee dollars.
Carryover can be broken out into two categories:

- **Carryover Unavailable for Use** – This value represents carryover funds subject to claims or restrictions that precludes FDA from obligating the carryover funds.

- **Carryover Available for Use** – This value represents carryover funds that are not subject to any claims or restrictions and are therefore available for obligation.

The net change in carryover balance each year is equal to cash collections minus net obligations. This is shown in Table 1 above.

Table 5 provides projections of BsUFA carryover balances at the end of the year. This is compared to calculations in Table 1, which cover beginning of the year carryover. Forecasted estimates will be supplemented with actual amounts in future Five-Year Financial Plan updates. The financial notes can be found in Appendix C.

</tr>
</tbody>
</table>

Numbers have been rounded to the nearest dollar

To determine how much carryover is available for obligation at the end of a fiscal year, the following factors must be considered:

- **Total Carryover, End of Year** – This is the total amount of unobligated funds at the end of the fiscal year.

- **Carryover Unavailable for Use, End of Year** – As noted above, this value includes unobligated funds subject to any claims or restrictions on fees collected. This includes:

  - **Refunds** – FDA maintains a small amount to provide for future year refunds, as a matter of prudent operations. For that purpose, a total of $1,000,000 is being set aside. Prior year actuals are included in the Total Carryover, End of Year amounts. See Note 7 for additional details.

- **Carryover Available for Use, End of Year** – As noted above, this is the total carryover less any carryover unavailable for use. These funds become the carryover available for use at the beginning of the next fiscal year.

Exhibit 4 below shows the historic trend of carryover in BsUFA I and the forecasted carryover in BsUFA II.
Exhibit 4: Historic and Forecasted Carryover Available by Fiscal Year

The carryover increased in FY 2020. This was a function of workload fluctuations and impacts from the COVID-19 pandemic on priorities. Because of the volatility in fee collections and workload, FDA aims to maintain 21 weeks of operating reserves by the end of FY 2022 to mitigate collection shortfalls, manage fluctuations in fee amounts, and ensure it can sustain operations if there is a lapse in appropriations.

K. Non-User Fee Appropriations

For FDA to obligate user fees collected under BsUFA, a certain amount of non-user fee appropriations must be spent on the process for the review of biosimilar biological product applications during that fiscal year. This is often referred to as a “non-user fee spending trigger”\(^8\). Table 6 presents the actual non-user fee spending triggers for FY 2018, FY 2019, FY 2020, and FY 2021, and the forecasted non-user fee spending trigger for FY 2022.

**Table 6: Minimum Allocation of BsUFA Non-User Fee Appropriations by Fiscal Year**

<table>
<thead>
<tr>

<td>$21,711,380</td>
<td>$22,038,420</td>
<td>$22,243,160</td>
<td>$22,518,640</td>
<td>$22,804,520</td>
</tr>
</tbody>
</table>

Numbers have been rounded to the nearest dollar

The non-user fee spending trigger amount is determined by multiplying the base amount of non-user fee appropriations spent on the biosimilar biological product review process ($20,000,000) times the adjustment factor for the fiscal year. See **Note 8** for more details on the adjustment factor.

FDA is committed to spending at least the required minimum from non-user fee appropriations each year. In years when FDA programs do not receive appropriations to cover costs of inflation and mandatory pay increases, FDA activities other than biosimilar biological product review may be reduced to assure that the allocation of non-user fee appropriations to the process for the review of biosimilar biological product applications meets the requirements of this trigger.

---

\(^8\) The statute provides that this is met if at least an amount that is 15 percent below the minimum level is spent (see section 744H(f)(2)(C) of the FD&C Act).
L. Planned Hiring

In the BsUFA II goals letter, FDA committed to target hiring 15 new FTEs in FY 2018 to enhance FDA’s capacity for biosimilar guidance development, reviewer training, and timely communication. FDA completed these hires in FY 2020. FDA will continue to increase staff as needed to address the program workload. In addition, FDA will review the financial status and workload demands of the program on a regular basis to ensure that funds are utilized to meet program commitments.

Management Assurance

M. Internal Controls

The Federal Managers’ Financial Integrity Act of 1982 (FMFIA) is intended to strengthen internal controls and accounting systems. OMB Circular A-123, Management’s Responsibility for Enterprise Risk Management and Internal Control (OMB A-123), implements the FMFIA requirements. FMFIA requires that management establish and maintain effective internal control to achieve the following objectives:

1. Effective and efficient operations,
2. Reliable reporting, and
3. Compliance with applicable laws and regulations.

The Department of Health and Human Services (HHS) provides guidance to its operating divisions (OpDivs) to implement FMFIA through its FMFIA Guidelines. OpDivs, including FDA, are responsible for developing and maintaining internal control and compliance programs that include programmatic and operational controls, as well as reporting controls to support sound financial management. The Government Accountability Office’s Standards for Internal Control in the Federal Government (Green Book) states, “Management is responsible for an effective internal control system. As part of this responsibility, management sets the entity’s objectives, implements controls, and evaluates the internal control system.” OMB A-123 requires an annual internal control assessment, and FMFIA requires the head of each executive agency to report annually on the effectiveness of the internal controls and any identified material weaknesses in those controls.

In alignment with FMFIA, OMB A-123, OMB A-11, the Green Book, and HHS guidelines, FDA established an Enterprise Risk Management (ERM) Program, with an ERM Council as the governance body responsible for providing overall oversight and accountability. The Council’s purview includes deciding on and managing the agency’s Enterprise Risk Profile and ensuring integration with FDA’s FMFIA, budget formulation, and strategic planning activities. The ERM Council has senior executive representatives from each FDA Center and Office, and is chaired by the Chief Operating Officer, with a Center Deputy Director as Co-Chair and the CFO as President Pro Tempore. The FDA’s ERM Program supports the Council in managing the agency’s Enterprise Risk Profile, and facilitates risk response planning, collaborates with Center and Office senior leaders and staff in conducting a range of analyses to manage risks, and provides communications and training opportunities that promote a risk-informed culture.

Additionally, FDA has an established Senior Assessment Team (SAT) to act as the governance body responsible for providing oversight and accountability for FDA’s internal control over reporting, including overseeing the FMFIA and OMB A-123 assessments, and for fostering an environment that promotes strong internal control. The SAT is chaired by the FDA Chief Financial Officer (CFO) and co-chaired by the Deputy CFO and Director of the Office of Financial Management, as well as a Program Co-Chair who is a Center Deputy Executive appointed by the CFO. The SAT members are representatives from each FDA Center and Office.
FDA’s internal control program includes integrated management controls covering the OMB A-123 appendices. Reporting controls are implemented in accordance with Appendix A, Management of Reporting and Data Integrity Risk; charge card controls in accordance with Appendix B, A Risk Management Framework for Government Charge Card Programs; controls over financial disbursements in accordance with Appendix C, Requirements for Payment Integrity Improvement; and financial system controls in accordance with Appendix D, Compliance with the Federal Financial Management Improvement Act of 1996 (FFMIA). FDA’s reimbursable activity cycle memo is specifically focused on the reporting controls related to the accounts receivable and payment processes associated with the user fee programs. This cycle memo describes the processes and controls performed by FDA to monitor the user fee cash receipts process and includes controls over reconciliation performance, aging, write-offs, and the interface between the User Fee System and the Unified Financial Management System.

In FY 2020, FDA’s annual assessment of internal controls included tests of 90 business, charge card and Information Technology (IT) controls across 21 transaction sub-cycles to identify recommendations to strengthen internal controls and compliance. FDA also conducted an improper payment risk assessment and performs annual improper payment testing. FDA’s User Fee System is compliant with HHS guidelines and OMB Circular A-123 Appendix D. FDA’s Integrated Budget and Acquisition Planning System (IBAPS) is used to support FDA budget formulation, budget execution, acquisition planning and payroll planning and also meets FDA and HHS system requirements.

FDA has also implemented other internal control procedures, including the performance of Organizational Risk Reviews (ORRs), which are reviews of targeted financial and non-financial management processes to identify potential recommendations to enhance internal control. Also, FDA maintains a Continuous Monitoring Program to oversee the timely implementation of corrective action plans for any deficiencies identified through any of its control assessments.

As a component of HHS, FDA’s financial data is presented in the HHS consolidated financial statements. The FY 2020 HHS audit found that FDA’s financial statements fairly present, in all material respects, the consolidated financial position of HHS as of September 30, 2020, and 2019, and related notes are in accordance with generally accepted accounting principles in the United States. Further, FDA’s FY 2020 Assurance Statement found no material weaknesses or financial system nonconformances.

N. Risks and Challenges

Financial Risks and Mitigation

As is the case with all financial programs, there are certain financial risks and challenges that exist with FDA’s user fee programs. These risks and challenges can vary from program to program, with some being in FDA’s control and some out of FDA’s control. An example of a shared financial risk across all user fee programs is that FDA cannot obligate funds in advance of receiving the funds, either through appropriated user fee collections or non-user fee appropriations. FDA can only assume what the Agency’s total appropriation will be in any given year. As a result, FDA has some risk of missing important performance goals, or failing to meet the non-user fee spending trigger for the fiscal year, if that total appropriation comes in considerably lower than anticipated. Below is a listing of foreseeable risks associated with the collections and obligations of funds for which FDA has identified contingency plans in order to move forward in the best interests of the program.

- **Uncertainty of User Fees and Non-User Fee Appropriations Levels:** It is difficult to predict the amount of non-user fee appropriations that will be approved by Congress, which creates financial planning challenges for the program since non-user fee fund levels are often uncertain for a good portion of the fiscal year. With Continuing Resolutions (CR) becoming more
prevalent, FDA has been spending at or slightly below levels from the prior authorized fiscal year during the CR period, thus limiting its ability to spend the non-user fee appropriations from the onset. Fluctuations in submissions from year to year can change the total program cost. This creates a situation where, due to extended CR periods, FDA is uncertain of its non-user fee appropriations for a significant portion of the year, yet it must still meet the non-user fee spending trigger. BsUFA I utilized a conservative approach in spending user fee revenue due the uncertain revenue levels, which contributed to a relatively large carryover balance. BsUFA II provides for a 15 percent range in which FDA can comply with its non-user fee spending trigger requirements.¹

- **Lapse in Non-User Fee Appropriations**: FDA is mitigating this risk to the program by maintaining a certain level of carryover so it can continue program operations in the event of a lapse of appropriations. FDA has committed to reducing the BsUFA carryover balance to no greater than 21 weeks. See Note 9 for additional details.

- **Under-Executing Planned Spend**: BsUFA budgetary resources have been under-spent due to the uncertainty around the timing of revenue (user fee and non-user fee) availability, non-user fee spending trigger requirements, workload fluctuations, and difficulties with hiring. To minimize this risk, FDA continues to enhance its planning and execution around the hiring of new staff and contract actions.

- **Under Collecting and Over Collecting Fees**: Since the BsUFA program experiences variation in workload, it is difficult to forecast the required revenue and set fees accordingly. If FDA does not receive the estimated number of fee-paying units, there may be an excess or deficit in targeted revenue. When FDA under collects user fees, it leverages its carryover balance to maintain continuity in operations. When FDA over collects, the carryover may increase without additional planned expenditures being identified to obligate those funds towards. The changes in the fee structure, minimization of clean-up billing, and the operating reserve are meant to mitigate these risks in BsUFA II. Resource capacity planning will help improve fee setting and allow FDA to adjust for sustained increases in workload. In addition, FDA monitors collections throughout the fiscal year, and the UFFMC and other FDA senior leaders determine how to mitigate any instances when user fee revenue deviates from forecasted estimates.

- **Global Health Pandemic**: There is currently some degree of uncertainty regarding the potential long term impact of COVID-19 on collections and application submissions for the time period starting in FY 2020 Q2. FDA is continually monitoring these impacts and will seek to address financial ramifications as warranted.

In addition to these mitigation strategies, FDA implemented IBAPS to enable greater and more timely insight into budget activity across the Agency. IBAPS improves the accuracy and availability of budget and acquisition information that enables FDA to better plan, forecast, track, and analyze the data to make better informed decisions about the best use of its resources.

**Strategic Challenges**

FDA has committed to improving its hiring and retention of scientific staff as described in the BsUFA II goals letter. As initiatives associated with these commitments span the course of BsUFA II, the benefits

¹ 21 U.S.C 379j-52(f)(2)(C)
expected from these initiatives will not be immediate, and, thus, FDA may experience delays in hiring staff for the BsUFA program.

Given the relative size of the BsUFA program and demands from external factors such as COVID-19, FDA’s ability to consistently meet the legal condition in section 744H(f)(2)(B)(i) of the FD&C Act (i.e., the “non-user fee spending trigger”) may be uncertain and will require close monitoring. FDA is making efforts to begin to simulate and forecast BsUFA process time to allow for scenario planning and close monitoring of trigger related impacts.
Appendices

A. Allowable and Excluded Costs for the BsUFA Program

Section 744G(13) of the FD&C Act defines the term “process for the review of biosimilar biological product applications” to mean the following activities of FDA with respect to the review of submissions in connection with biosimilar biological product development, biosimilar biological product applications, and supplements:

<table>
<thead>
<tr>
<th>Included Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The activities necessary for the review of submissions in connection with biosimilar biological product development, biosimilar biological product applications, and supplements.</td>
</tr>
<tr>
<td>2. Actions related to submissions in connection with biosimilar biological product development, the issuance of action letters which approve biosimilar biological product applications or which set forth in detail the specific deficiencies in such applications, and where appropriate, the actions necessary to place such applications in condition for approval.</td>
</tr>
<tr>
<td>3. The inspection of biosimilar biological product establishments and other facilities undertaken as part of FDA’s review of pending biosimilar biological product applications and supplements.</td>
</tr>
<tr>
<td>4. Activities necessary for the release of lots of biosimilar biological products under section 351(k) of the Public Health Service Act.</td>
</tr>
<tr>
<td>5. Monitoring of research conducted in connection with the review of biosimilar biological product applications.</td>
</tr>
<tr>
<td>6. Post-market safety activities with respect to biologics approved under biosimilar biological product applications or supplements, including the following activities:</td>
</tr>
<tr>
<td>a. Collecting, developing, and reviewing safety information on biosimilar biological products, including adverse-event reports.</td>
</tr>
<tr>
<td>b. Developing and using improved adverse-event data-collection systems, including IT systems.</td>
</tr>
<tr>
<td>c. Developing and using improved analytical tools to assess potential safety problems, including access to external databases.</td>
</tr>
<tr>
<td>d. Implementing and enforcing section 505(o) of the FD&amp;C Act (relating to post-approval studies and clinical trials and labeling changes) and section 505(p) of the FD&amp;C Act (relating to risk evaluation and mitigation strategies).</td>
</tr>
<tr>
<td>e. Carrying out section 505(k)(5) of the FD&amp;C Act (relating to adverse-event reports and post-market safety activities).</td>
</tr>
</tbody>
</table>

Section 744G(9) of the FD&C Act defines the term “costs of resources allocated for the process for the review of biosimilar biological product applications” as the expenses in connection with the BsUFA program for:

<table>
<thead>
<tr>
<th>Included Expenses</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Officers and employees of FDA, contractors of FDA, advisory committees, and the costs related to such officers, employees, and committees, and to contracts with such contractors;</td>
</tr>
<tr>
<td>2. Management of information and the acquisition, maintenance, and repair of computer resources;</td>
</tr>
<tr>
<td>3. Leasing, maintenance, renovation, and repair of facilities and acquisition, maintenance and repair of fixtures, furniture, scientific equipment, and other necessary materials and supplies; and</td>
</tr>
<tr>
<td>4. Collecting fees under section 744H of the FD&amp;C Act and accounting for resources allocated for the review of submissions in connection with biosimilar biological product development, biosimilar biological product applications, and supplements.</td>
</tr>
</tbody>
</table>
The BsUFA program excludes costs related to the following:

<table>
<thead>
<tr>
<th>Excluded Applications</th>
<th>Excluded Activities</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. An application that cites as the reference product a product approved before September 1, 1992, that is either a bovine blood product for topical application or a large-volume parenteral drug product;</td>
<td>1. Enforcement policy development not related to sections 505(o) and (p) of the FD&amp;C Act;</td>
</tr>
<tr>
<td>2. An application with respect to the following:</td>
<td>2. Post-approval compliance activities not related to the enforcement of sections 505(o) and (p) of the FD&amp;C Act;</td>
</tr>
<tr>
<td>• An allergenic extract product;</td>
<td>3. Advertising review activities once marketing of the product has begun;</td>
</tr>
<tr>
<td>• Whole blood or a blood component for transfusion;</td>
<td>4. Inspections unrelated to the review of covered applications, unless undertaken for the enforcement of sections 505(o) and (p) of the FD&amp;C Act; and</td>
</tr>
<tr>
<td>• An in vitro diagnostic biological product; or</td>
<td>5. Research unrelated to the BsUFA program.</td>
</tr>
<tr>
<td>• A biological product for further manufacturing use only.</td>
<td></td>
</tr>
</tbody>
</table>

**B. User Fee Program History**

The FD&C Act, as amended by BsUFA, authorizes FDA to collect user fees from the biosimilar biological product industry to supplement the non-user fee appropriations that the Agency spends on the process for the review of biosimilar biological product applications. FDA spends fee revenues and non-user fee appropriations to hire, support, and maintain personnel for the review of biosimilar biological product applications, and to help ensure that safe and effective biosimilar biological products reach the American public more quickly.

Originally authorized in 2012, BsUFA was reauthorized by FDARA in 2017 (BsUFA II) with the support of the biopharmaceutical industry, public stakeholders, Congress, and the Administration.

**C. Financial Notes**

**Note 1. Annual Target Revenue Methodology**

*Exhibit 5* is a flow chart delineating the BsUFA II Annualized Base and Target Revenue Methodology.
Note 2. Recoveries

Recoveries account for funds returned to the Agency in the form of deobligations of prior year obligations. For example, recoveries could include funding from a contract that ended in a prior year and was not expended.

Note 3. Pay and Operating Costs

Pay and operating costs associated with the BsUFA program are based on obligations attributed to CBER, CDER, ORA, and HQ.

For payroll, employees are required to report their time in an activity-based reporting system, which allows FDA to identify activities that user fees can be used to support. See Appendix A for a listing of those activities. For operating activities (e.g., contracting services), funds are allocated based on the proportion to which those activities support the BsUFA program. If an operating activity solely supports BsUFA, it will be fully funded by the program. If the operating activity is shared, BsUFA will fund the activity in proportion to how it is used by the program as compared to other programs.

Note 4. Rent Costs

The GSA charges rent to FDA for the Federal buildings that FDA occupies. This rent is charged at different rates depending on the type and location of the space provided. Since rent is an essential support cost for the process of review of biosimilar biological product applications, a portion of those charges is paid from non-user fee appropriations and a portion is paid from BsUFA fees. Also included in this account are recurring costs that FDA pays to non-Federal sources under the delegation of direct lease and service authority. These services include rental of space, and all recurring services for building operations such as overtime utilities, janitorial services, guards, and ground maintenance.
amount of rent and rent related costs each Center pays is directly related to the square footage occupied by that Center.

**Note 5. Shared Service Costs**

FDA has several shared service organizations, located with the WCF, that provide support across the user fee programs. Several new organizations joined the WCF in FY 2020. The shared service organizations in FY 2020 include:

- **FDA Central**: Provides for Center-wide and Agency-wide services such as telecommunications, training, printing, mail and document management, IT systems, employee health units, and other support and miscellaneous services.
- **Employee Resource & Information Center**: Provides support to all FDA employees requesting administrative, IT, facilities, human resources, and other employee services.
- **Office of Acquisitions and Grants Services**: Manages contracts, grants, and other agreements.
- **Office of Equal Employment Opportunity**: Promotes an inclusive work environment that ensures equal employment opportunity, and fosters a culture that values diversity and empowers individuals.
- **Office of Facilities, Engineering, and Mission Support Services**: Provides FDA employees with office and laboratory facilities.
- **Office of Financial Management**: Provides financial managerial services and policy guidance.
- **Office of Information Management and Technology**: Provides the information, communication, and knowledge infrastructure and services that enhance, transform, and sustain the ability of FDA to protect and promote the public health.
- **Division of Budget Execution and Control**: Initiates, monitors and analyzes FDA budget resources. The agency budget is comprised of several appropriation accounts including: Salaries and Expenses, Revolving Fund for Color Certification and other Services, Cooperative Research and Development Agreement, Contingency Fund, Building and Facilities, and Royalties.
- **Office of Finance, Budget, and Acquisitions**: OFBA leads FDA’s budget, acquisitions, and financial management functions while ensuring the financial integrity of FDA’s resources.
- **Office of External Affairs – History**: Provides research, documentation, and preservation of significant FDA historical resources, as well as serving as historian for the Agency.
- **Office of Security Operations**: Develops and implements the Agency-wide security policies and programs by providing leadership and guidance to managers and staff on all aspects of security. Administers vital security functions that contribute to the Agency’s mission of protecting the public health by enhancing the safety and security of all personnel, facilities, and information.
- **Office of Laboratory Safety**: OLS reinforces FDA’s expectations for safety and laboratory security, enhances communications among FDA safety staff, and provides program support.
- **Office of Ethics and Integrity**: Protects the integrity of FDA’s programs and operations by promoting an ethical culture and ensuring compliance with applicable federal ethics laws.
- **Office of Enterprise Management Services**: Informs operational objectives and guides strategic management planning to facilitate increased Agency effectiveness and efficiency.
- **Program Alignment Team**: Provides advice and guidance on reorganizations and delegations of authority.
- **Office of Human Capital Management**: Provides Human Resource services which promote collaboration and a work environment that is characterized by diversity, fairness, open communication, personal accountability, trust and mutual respect.
- **Office of Talent Solutions**: Provides high quality and efficient Human Resource solutions that enable the FDA to hire a talented and qualified workforce.
Note 6. FY 2018 Adjustment

For FY 2018, the fee revenue amount was $45,000,000, adjusted as needed to reflect an updated assessment of the workload for the process for the review of biosimilar biological product applications. In considering the appropriate FY 2018 fee revenue adjustment, FDA considered a range of factors including its best estimated level of submissions and activities (including forecasts of new BPDs, new 351(k)s, resubmitted 351(k)s, advisory committee meetings, interchangeability supplements, industry meetings, inspection activity, science and research activities, policy work, and other activities). Considering the totality of work that was forecasted for FY 2018 (and recognizing the inherent uncertainty of any forecast), FDA determined the appropriate adjusted level of the FY 2018 BsUFA fee revenue amount to be $40,214,000 (rounded to the nearest thousand dollars). FDA used this amount as the target revenue amount for FY 2018.

Note 7. Refunds

If a person submits a biosimilar biological product application before October 1 of the fiscal year and the application is accepted for filing on or after October 1 of that fiscal year, the applicant may request a refund of the annual BPD fee paid by the applicant for such fiscal year. If an application is refused for filing or is withdrawn without a waiver before filing, FDA will refund 75 percent of the application fee paid.

Refunds impact net fee collections for each fiscal year. Cash collections reflect the amount of fees collected net any refunds or adjustments that occurred during that fiscal year.

Note 8. Adjustment Factors

FDA must calculate and incorporate adjustment factors in establishing fees. For purposes of calculating BsUFA fees for FY 2019 and subsequent fiscal years, section 744H(c)(1)(B)(ii) of the FD&C Act utilizes an inflation adjustment that includes the following: "the average annual percent change that occurred in the Consumer Price Index for urban consumers (Washington-Baltimore, DC-MD-VA-WV; Not Seasonally Adjusted; All items; Annual Index) for the first 3 years of the preceding 4 years of available data".

For the purposes of calculating the "non-user fee spending trigger" amount for FY 2018 and subsequent years, an "adjustment factor" is utilized, which is defined in section 744G(1) of the FD&C Act as follows: "The term ‘adjustment factor’ applicable to a fiscal year that is the Consumer Price Index for urban consumers (Washington-Baltimore, DC-MD-VA-WV; Not Seasonally Adjusted; All items) for October of the preceding fiscal year divided by such Index for October 2011.” Since the data in this index for October is unavailable, FDA utilizes the most recent data, which is September.

As a result of a geographical revision made by the Bureau of Labor and Statistics in January 2018, the Washington, DC-Baltimore index was discontinued and replaced with two separate indices (i.e., "Washington-Arlington-Alexandria" and "Baltimore-Columbia-Towson"). In order to continue applying a CPI which best reflects the geographic region in which FDA is located and which provides the most current data available, the Washington-Arlington-Alexandria index is now used in calculating these BsUFA II adjustment factors.

Note 9. Operating Reserve Adjustment

Beginning in FY 2019, the target revenue may be reduced for long-term financial planning purposes. Beginning with the first fiscal year for which fees are set after the capacity planning adjustment is effective, FDA may reduce the fee revenue for long-term financial planning purposes or increase the fee revenue to provide for not more than 21 weeks of operating reserves of carryover user fees for the
process for the review of biosimilar biological product applications. Should operating reserves be increased or decreased in a given fiscal year, the rationale for the adjustment will be provided in the fee-setting notice in the Federal Register.
