

FINDING OF NO SIGNIFICANT IMPACT

Marketing Orders for

ELEMENTS RED 1¼ and RAW BLACK 1¼

by BBK Tobacco & Foods, LLP Company dba HBI International

The Center for Tobacco Products of the Food and Drug Administration (FDA) has carefully considered the potential environmental impacts of these actions and has concluded that these actions will not have significant effects on the quality of the human environment. Therefore, environmental impact statements are not required.

BBK Tobacco & Foods, LLP Company dba HBI International wishes to introduce two new roll-your-own (RYO) rolling papers into interstate commerce for commercial distribution in the United States and submitted to FDA two substantial equivalence reports to obtain marketing orders under the provisions of sections 910 and 905(j) of the Federal Food, Drug, and Cosmetic Act.

The Agency prepared the programmatic environmental assessment (PEA), dated May 26, 2020, in accordance with the Council on Environmental Quality's regulations (40 CFR 1500–508) implementing the National Environmental Policy Act (NEPA) and FDA's NEPA regulations (21 CFR 25.40) to support the finding of no significant impact. The evidence supporting this finding is contained in the attached PEA, which is available to the public upon request.

The PEA evaluates potential environmental effects due to manufacturing, use, and disposal of the new products. No increased or new types of environmental impacts due to manufacturing the new products are anticipated. The Agency does not foresee that use of the new products would result in new or different environmental impacts. The Agency believes that the disposal of the new products is the same as the disposal conditions of other RYO rolling papers that are currently marketed in the United States. Therefore, the Agency does not foresee significant adverse impacts to the environment due to the proposed actions as a result of the manufacturing, use, and disposal of the new products.
