MODERNAMA COVID-19 VACCINE

messenger ribonucleic acid (mRNA), lipids (SM-102, polyethylene glycol [PEG] 2000 dimyristoyl glycerol [DMG], cholesterol, and 1,2-distearoyl-sn-glycero-3-phosphocholine [DSPC]), tromethamine, tromethamine hydrochloride, acetic acid, sodium acetate, sucrose
- Moderna COVID-19 is a vaccine developed by Moderna Inc., a US biotechnology company. It uses a novel approach called messenger RNA (mRNA) technology to deliver the COVID-19 virus's genetic code to the body, allowing the body to produce an immune response to COVID-19.

- Moderna COVID-19 was approved by the US Food and Drug Administration (FDA) on December 22, 2020, making it the first mRNA vaccine to be approved in the United States.

- The vaccine is given in two doses, typically 28 days apart, and is effective against the original strain of SARS-CoV-2 as well as some of its variants.

- Moderna COVID-19 has been authorized for emergency use in children ages 5 to 11 years by the FDA on November 12, 2021. However, this approval is still subject to FDA authorization and may be revoked at any time.
