**Availability Update for Sodium Phosphates Injection, USP,  
Potassium Phosphates Injection, USP, Sodium Acetate Injection, USP, and  
Potassium Acetate Injection, USP**

Dear Customer,

In November 2021, Pfizer Hospital updated you on the limited supply status of **Potassium Phosphates Injection, USP, Sodium Phosphates Injection, USP, Sodium Acetate Injection, USP, and Potassium Acetate Injection, USP** due to a production delay. The purpose of this letter is to make you aware that production has restarted for all presentations and Pfizer is releasing quantities at historical levels. Although we have increased output, backorders continue to rise as well, thereby extending our estimated recovery dates further than previously anticipated.

Pfizer's latest next delivery and recovery estimates for the select products are included in the table below. While production remains ongoing and intermittent deliveries of these products are expected to continue, we now anticipate full supply recovery—when we have sufficient inventory available to meet historical demand projections in addition to several weeks of safety stock in our distribution centers—between Q2 2022 and Q1 2023, depending on the presentation.

Please recognize that this is a dynamic situation and these estimates may change, so we encourage you to check our [Availability Report](#), updated daily and accessible on the [PfizerHospitalUS.com](#) homepage, for the latest information on product status. We will continue to provide timely updates as necessary.
