Study data standards describe a standard way to exchange clinical and nonclinical study data. These standards provide a consistent general framework for organizing study data, including templates for datasets, standard names for variables, identify appropriate controlled terminology and standard ways of doing calculations with common variables. Data standards also help FDA receive, process, review, and archive submissions more efficiently and effectively.

This Study Data Resources page includes required items and helpful tools for submission of study data to FDA's Center for Biologics Evaluation and Research (CBER), Center for Drug Evaluation and Research (CDER), and Center for Devices and Radiological Health (CDRH).

Needed when SEND is not required:

1. Study Initiation Date is prior to requirement date
2. A Study Initiation Date is Not Applicable (see Section 8.2.2 of the Study Data Technical Conformance Guide)

Neither SEND (TS) nor simplified ts.xpt = TRC Rejection

TRC REJECTIONS & TOP ERROR REASONS

REJECTION NOTIFICATIONS

Sponsors receive a rejection notice from FDA when an eCTD validation error is identified.

Rejection notifications specify each error and provide:

- Error Code
- Error Reason
- STF Study ID (if applicable)
- eCTD Section

MONTHLY TRC WARNING & REJECTION TREND (CDER)

CDER TRC REJECTIONS

■ 1734 ■ 1789 ■ 1735 ■ 1736

- 1734 is the most common error and failure reason for all application types for a missing ts.xpt
- Commercial IND submissions have highest number of failures overall and have particularly high numbers of 1734 errors

Notes: Metrics generated from data between September 15, 2021 and March 15, 2022.

1789 severity elevated to high 9/15/21 but not specific to standardized study data requirements.

ADDRESSING TOP ERRORS: 1734

❖ 58% of errors across Application Types

❖ 62% of errors for IND Applications

1734 Validation

A dataset named ts.xpt with information on study start date must be present for each study in required sections*

- ✓ Trial Summary Dataset (ts.xpt) is present
- ✓ Study ID (or SPREFID) matches STF Study ID
- ✓ Study start date is provided (or TSVALNF = NA)
- ✓ Study start date is in a valid format

65% due to Missing ts.xpt

86% of Missing ts.xpt 1734 Errors are for Non-Clinical Studies in M4

- No ts.xpt found for this study
- Study ID in ts.xpt does not match study ID from STF
- No ts.xpt with value for SSD found (and no null flavor value)
- Study start date is incorrectly formatted and TSVALNF has no null flavor value

ADDRESSING TOP ERRORS: 1734

- No ts.xpt found for this study
- Study ID in ts.xpt does not match study ID from STF
- No ts.xpt with value for SSD found (and no null flavor value)
- Study start date is incorrectly formatted and TSVLNLF has no null flavor value

Simplified ts.xpt referenced by the study causes a 1734 failure for missing study start date:

	STUDYID	TSPARMCD	TSVAL	TSVALNF
1	90-day-oral-tox-s...			NA

Causes of 1734 Missing Study Start Date:

- ❖ Missing Value for SSD
- ❖ Missing Parameter Code
- ❖ Incorrect Parameter Code

IMPORTANCE OF STANDARDIZED STUDY DATA

WHY IS 1734 IMPORTANT?

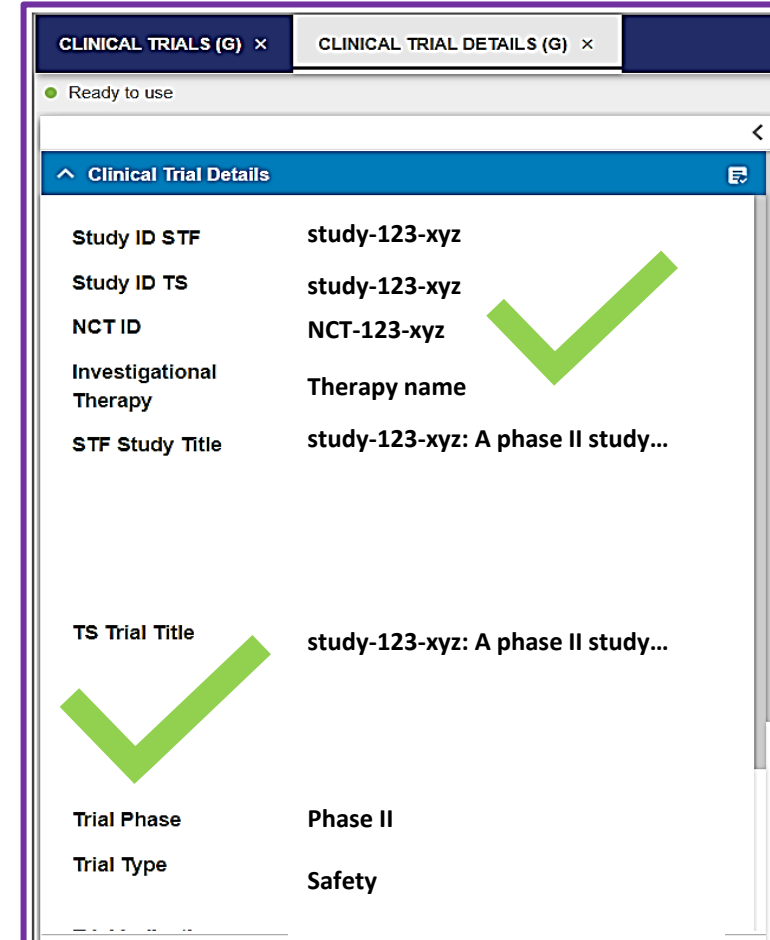

Missing ts.xpt:

- X Can't determine the study start date, if TRC applies and whether standardized datasets are required
- X Cannot connect to other clinical trial data and limits details available to reviewers

When a ts.xpt is included:

- ✓ Enables detailed searches
- ✓ Enables connections between data sources, such as ClinicalTrials.gov using NCT number

WHY ARE 1735 & 1736 IMPORTANT?

File tags act as standardized sub-headings within a study to help distinguish and group files based on content.

When datasets are provided and tagged correctly:

- ✓ Enables detailed searches by file type
- ✓ Enables filtering by file type
- ✓ Enables locating essential study files, including dm.xpt, adsl.xpt, and define.xml
- ✓ Enables automated loading into analysis applications
