Subject: Novartis PLUVICTO Increased Supply Availability & Our Commitment to You

June 02, 2023

Dear Health Care Provider,

We are writing to inform you of continued progress in the ramp up of PLUVICTO® (lutetium Lu 177 vipivotide tetraxetan) supply for US patients and to express our gratitude for your patience and support.

Following the approval a few weeks ago that added Millburn as an approved site for the manufacturing of PLUVICTO for US commercial distribution, I'm pleased to share that we are ahead of schedule in the acceleration of PLUVICTO production. We have added more available doses into the ROME ordering system for near-term and future booking for all doses within the PLUVICTO treatment cycle and are now providing real-time order confirmations. This supply availability will continue to increase throughout the year as we further expand our radioligand therapy manufacturing capacity, including anticipated expansions at our Millburn site and the introduction of our state-of-the art facility in Indianapolis, which is projected to open by the end of this year.

While we anticipate stability in our supply of PLUVICTO and have implemented procedures to help mitigate future disruptions, we also want to be transparent about the potential for periodic isolated disruptions due to the intricate nature of manufacturing radioligand therapies. Please know that we continuously monitor our supply chain and are committed to real-time communication with you about the status of your orders.

Should you have any questions or require assistance, please do not hesitate to contact one of our Novartis Customer Support specialists at customerserv-us.aaa@novartis.com (+1 844-367-3222) or reach out to your field-based Access & Reimbursement representative.

Once again, we would like to extend our sincerest gratitude for your patience and support.

Sincerely,

Keith Bratti

VP, Novartis Patient Support, Radioligand Therapy
