

Limitations: The adverse event and product problem reports contained in this record are not necessarily causally related to (caused by) the reported product, nor do they mean the product was defective. Consumer complaints involving animal foods are received by FDA through voluntary reporting systems. Not all reports undergo follow up actions by FDA; however, each report received is important to FDA as part of our ongoing surveillance efforts related to pet food safety. Trends in reporting can provide an early warning of emerging safety issues of concern.

Other limitations:

- For any given report, there is no certainty that the reported pet food caused the adverse event. The adverse event(s) reported may be more related to an underlying disease, condition, or concomitantly administered medication.
- The report narratives are provided in the form in which we received them, the quality of the information provided about the adverse event/product problem is dependent on the quality of the information received from the veterinarian and/or pet owner.
- Adverse event report numbers should not be used to calculate incidence rates or measures of relative risk. It is not data from a controlled study, and there is no accurate way to know the true size of the population exposed to a product, nor the true population affected with an adverse event.
- Adverse event data should not be used to compare the safety of different products. Many factors can influence reporting, and products that are more widely distributed or sold in greater volume may have more reporting than those with limited distribution or sales. Products for which there has been recent publicity may experience more reporting for a period of time afterwards. Underreporting is also common with adverse event reporting systems.

EON-165661	4/30/2014 14:36	Cesar Savory Delights	My 4 year old Boxer, (b) (6), is dying from Lymphoma. Chemo was doing more harm then good so we went to a holistic diet. Chicken was one of the foods (b) (6) was to AVOID. We have always used Cesar (I also have a pit bull). The lable would read Pork Tenderloin with Roasted Potatoes & Green Beens or Ham & Egg flavor with potato and cheese.....all varities read like this. The font on the ingredients is sooo tiny my son in law just noticed that each variety contains chicken.....but you would never know it. This is unacceptable						
EON-165657	4/30/2014 12:54	beneful	my son bought beneful...three days later (b) (6) had bloody diarrhea and clear vomiting along with refusal to eat..took her to the vet who wanted to keep her and run tests , but I couldn't afford, she was given an antibiotic and an anti nausea shot, I took her home and spooned a tsp of tea in her mouth every half an hour, followed by chicken and rice soup for a week (homemade)..she did get better..the only charge I have is 72 for the vet visit..	13	Years	Poodle (unspecified)	Dog	16	Pound
EON-165653	4/30/2014 12:18	Hills Prescription Diet d/d Canine Skin Support Venison Formula	My 5.5 year old Chow is allergic to all meat but venison (vomiting, diarrhea and colitis with bleeding). He can only eat prescription Hills D/D Venison and Potato brand food. Over the last 2 winters, the food has come to me freezer burnt and my dog won't eat it. Last year, I had to search to find cases that were made with certain expiration dates to avoid the cans that had been frozen. This year, I cannot find any that weren't frozen and have to heat the food and add water to it so that he will eat it. I contacted Hills and they say there is nothing they can do to help me, but send some coupons. I told my vet that I couldn't accept any more cases made in the winter months and the distributor told them that if I ordered it and returned it, they would stop delivering to my vet. This has caused a problem with my vet and me as they don't want to lose the ability to get Hills food for their other patients. I have no options but to buy a prescription diet for my dog.

EON-165639	4/30/2014 11:30	Pet Shoppe Sweet Potato Slices	<p>I purchased a couple of bags of these sweet potato treats for my dogs and, seeing that they liked them, bought five more bags.</p> <p>I began to notice that my dogs were urinating more than normal and drinking more water than usual. I had checked the contents of the treats before I first purchased them and did not see anything that concerned me but, after witnessing these side effects, I read the warnings on the packaging. It stated that dogs should be provided plenty water, humans shouldn't eat the treats and must wash their hands after coming in contact with the treats! The true ingredients of the product have not been disclosed. What exactly are they made of? They are injurious to any one who consumes them. Walgreen must remove them from the market.</p> <p>I have thrown all of my bags away. 4/30/14</p>	6	Years	Doberman Pinscher	Dog	65	Pound
EON-165509	4/29/2014 12:54	Happy Hips Chicken Jerky Treats	Pet was taken to veterinary for one week boarding. Dog was in excellent health with no problems when dropped off. My wife sent Happy Hips Chicken Jerky Treats with dog to eat during boarding stay. The next morning Vet called and reported that dog was listless, non responsive and having difficult time breathing. We picked dog up from Vet and took him home with an antibiotic given to us by Vet. The dog died one hour after we had brought him home. I placed dog in freezer until we returned from vacation and then took him to the (b) (6) for autopsy.	10	Years	Poodle (unspecified)	Dog	28	Pound
EON-165410	4/29/2014 10:03	Beefeaters Natural Cuisine 1lb Natural Chips Rawhide Item #8709 Made in Colombia Lot#CIF231	We gave both dogs the rawhide chews on 3 out of 4 nights and one of them, (b) (6) who is 11, was up all night having to go out and had diarrhea and generally didn't sleep for those 3 out of 4 nights. The one night we didn't give him a chew he was fine and when we figured out it was the chews, on the 5th night when he didn't have one, he was fine. The 2nd dog, (b) (6) vomited the next morning on 2 of those days after having had a rawhide chew.	11	Years	Whippet	Dog	35	Pound

EON-164860	4/22/2014 17:39	Meow Mix Pate' Toppers	I bought Meow Mix pate' toppers for my cat. At first he loved it, but about after the first 6, he started throwing up soon after eating by # 9 he was VIOLENTLY throwing up right after eating. I took a picture while he was throwing up for the forth time showing how much he threw up after eating the pate'. I immediately stopped feeding the pate', he hasn't thrown up since.	8	Years	Domestic Shorthair	Cat	14	Pound
EON-164674	4/21/2014 16:18	Bravo Premium Turkey Formula	Dog began vomiting in the middle of the night on Saturday, 4/19/14. His previous meal was one 1/4 lb Bravo Premium Turkey Formula patty with 1 c. steamed green beans and the supplements noted above, followed by a Greenie. He continued vomiting until mid-afternoon 4/19/14 and kept no food down. I was in contact with my veterinarian by phone and we were waiting and watching. Early on 4/20/14 he would not get up, would not eat and by 8 am was trembling. I called my veterinarian and took my dog to the emergency veterinarian. He had a fever and after examination I was notified that this could be a food-borne illness caused by the Bravo turkey patty. He is still hospitalized and undergoing tests and observation. They contacted the NM Department of Agriculture Feed, Seed & Fertilizer Section and I have just completed a visit and inspection with their Inspector Knowlton. He has removed all remaining product for further testing. This information can be accessed via Report JK04211401.	6	Years	Mixed (Dog)	Dog	50	Pound
EON-164608	4/21/2014 12:33	BUTCHER SHOPPE / 100% NATURAL HICKORY SMOKED BEEF DOG BONE (IN A SUBSCRIPT-THE WORD "CHAMP")	Fed Marvin Bovine Femur coated with Flavoring purchased wrapped at a Publix (b) (6). (b) (6) chewed on bone for several hours. I took the bone away prior to bedtime. I was awoken at 8AM to him vomitting up what appeared to be the flavoring on the bone, then he went into a grand mal seizure for several minutes. He has NEVER had a seizure before, and his breeder reports that his blood line does not have a history of these types of problems.	5	Years	Retriever - Labrador	Dog	130	Pound
EON-164563	4/21/2014 9:45	Spot Feline Harvest Dental Treats	I noticed that these treats contain what appear to be very, very sharp pieces of clear plastic string or glass - I can't identify this clear material. My cat ate several of these treats and I am concerned about the health effects they could have.

EON-164549	4/20/2014 20:45	Nutro Natural Choice Wholesome Essentials Adult Chicken Whole Brown Rice & Oatmeal Formula	<p>As of mid to late March our pet was in great health. We switched her food to Nutro Natural Choice Wholesome Essentials (Adult) Chicken, Whole Brown Rice & Oatmeal formula. We switched her food with the intent of providing her with the best diet possible. Within days after consuming the food for the first time our dog was vomiting yellow bile. As the weeks have gone on we have continued the food and are now on our second 5lb bag of the food, which we bought last week. Our dog usually has 1-2 cups of food a day. Since the first time she vomited she has continued to vomit at least a few times a week since then. In the past couple of weeks it has turned into every other day and now every day. We are stopping this food as of today as we are concerned that this is the reason she has been vomiting yellow bile. She has also had softer stools that are yellow in color since starting the food. I suspect that it is the food because after extensive research on several canine forums regarding the Nutro company and brand of food many other pet owners also suspect that their dogs (with the same symptoms) are also being poisoned.</p> <p>I do not have the information from the first package. The information I have from the current bag is as follows:</p> <p>UPC:079105109123 (underneath UPC: 1265346)</p> <p>"Best By 11 OCT 14 27 2 341F2LEB0419:15"</p>	5	Years	Corgi - Welsh Pembroke	Dog	35	Pound
EON-164545	4/20/2014 20:30	SmartFlex Rehab, SmartFlex Senior, SmartFlex Senior Herb-Free, SmartFlex I Maintenance, SmartFlex II Support, SmartFlex III Resilience, SmartFlex IV Ultimate, SmartColic Care, SmartGut Ultra	Joint supplements for horses using ingredients that perhaps should not be in the food chain and that have not been approved by the FDA as safe for horses. Also, appears to be subject of patent infringement lawsuit.						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-164543	4/20/2014 20:03	Waggin' Train Chicken Jerky Treats	In the summer of 2012 we gave her Waggin" Train chicken jerky treats. In October that year she became listless, lost her appetite ,had difficulty breathing and her eyes were rolling back in her head. Her symptoms worsened throughout November so we took her to the veterinary school at (b) (6) December 3, 2012. After thorough testing she was diagnosed with Protein Losing Nephropathy, which is a fatal kidney disease. She was prescribed medication and was expected to live 30 days.	8	Years	Pointer - English Pointer	Dog	50	Pound
EON-164530	4/20/2014 15:12	science diet advance fintness	we feed him science diet advance formula they have changed ingredients he started to poop pure blood	5	Years	Retriever - Labrador	Dog	80	Pound
EON-164510	4/19/2014 21:06	Fruit wraps	Dog vomited object that appears to be freeze dried pineapple piece from dog treat days after eating. Concern that the pineapple pieces are not able to be digested. May cause obstruction or bezoar with continued feeding.	10	Years	Dachshund (unspecified)	Dog	13	Pound
EON-164497	4/19/2014 11:27	Pedigree Meary Ground Dinner	Upon opening a can of Pedigree meaty ground dinner dog food the top layer about 1/2 inch was green slime. A picture is available. Hard to believe Pedigree would can and sell something that was obviously toxic.						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-164395	4/17/2014 22:36	Natural Balance Sweet Potato and Venison Limited Ingredient Diet Dry	Dog progressively got more lethargic and consumption of water and urination frequency increased greatly over a period of about three or four months. Started to reject food on March 27, 2014. Would eat all other kinds of food except Natural Balance Sweet Potato and Venison Limited Ingredient Diet (dry, bagged). Bought multiple bags of food and dog continued to refuse it but would eat anything else presented to her. On April 4, still refusing Natural Balance food and now showing jaundice (yellow eyes, orange urine) and increasing lethargy and lack of interest in normal things, we took her to the emergency vet, where she spent 2 nights on fluids and meds. Diagnosed with acute liver failure, tests indicated it was caused by a toxic ingestion of some sort. Ruled out other sources of possible toxins. Liver enzymes were extremely high, with no other causes indicated (testing ruled out cancer, chronic liver disease, bacterial infections, etc.) We believe, particularly after seeing multiple vets and reading similar complaints from other pet owners in the last several months, that this Natural Balance food has changed in some way over the past 6 to 12 months, and that our dog got seriously, life-threateningly ill from it over time. Other dog in our household started to reject the very same food (but eventually was hungry enough to eat it) and fortunately we took both dogs off that food before the other dog showed serious signs of illness. Hopefully it's not too late for our dog with the liver failure. She is on four different medications to reduce the liver inflammation and protect her liver. She did great on this food for nearly four years, but within the past 4 to 6 months has declined in health and refused the food when eagerly accepting all other foods. We are concerned that this food and/or company has changed sources of ingredients and/or manufacturing practices, particularly after finding out that the company merged with Del Monte within the same time frame that our dog started to get very ill.	7	Years	Mixed (Dog)	Dog

EON-164378	4/17/2014 13:51	Hartz Oinkies Pig Skin Twists Original Real Smoked Flavor!	Dog was given treats in evening before becoming sick. It was the only thing given that was different from normal food. Early in the following morning the dog vomited all of the "pigskins". She continued to vomit the rest of the morning and could not even keep down water. We took her to the vet that day and came home with sub Q fluids to administer. She continued to dry heave the next day and was returned to the vet again. She was given anti nausea injection and continued on the sub Q fluids. She continued to worsen during the night and was returned to the vet TWICE the next day! At this point she was admitted to the hospital for further tests and was determined to have severe gastrointestinal inflammation and pancreatitis. She was maintained on IV fluids and meds for 4 days and her blood work slowly improved. She was sent home and then had to return once more to the hospital for vomiting. She was a very sick dog and we almost lost her twice! The "Oinkies" were the ONLY thing that could have made her sick! All the veterinarians agreed with us that this was the case!	7	Years	Pointing Dog - Hungarian Short-haired (Vizsla)	Dog	45	Pound
EON-164372	4/17/2014 11:36	Castor & Pollux Organix Indoor Adult Dry Cat Food 5.25 Pound Bag (Chicken Brown Rice Flaxseed)	My two cats had been puking more than usual. The third one I suspect refrained from eating the bad food, opting to only eat the wet food served daily, though I can't be certain.	6	Years	Domestic Shorthair	Cat	14	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-164333	4/16/2014 17:27	Nutro Natural Choice Lamb & Whole Brown Rice Formula	Our dog was eating Nutro Lamb and Rice for Large breeds since we got him in November of 2012. He frequently threw up and had diarrhea, but we figured he had a sensitive stomach since he was in perfectly fine health. The last batch of Nutro we bought, in March of 2014 had a strange odor, but it is dog food so how good would it really smell? After eating a full serving from this bag of food, my dog became violently ill - throwing up, horrible diarrhea, with blood in both. There was nothing else wrong with him so I looked up the brand of food to see if it had been recalled, which it had not, but what I found was horrifying. On a consumer affairs website, I was able to read MANY posts of pet owners who were noticing the same problems. We switched our dog to another brand of food and he has been in perfect health since. He has not thrown up or had diarrhea at all, his stomach is not sensitive, he was being poisoned by the food. After numerous attempts to reach Nutro, I finally spoke to a horrible customer service representative that pretty much told me there was no problem and that I was an idiot for believing what I have read. I have gotten every single one of my friends that was using Nutro to switch and each one of them has noticed a positive change in their pets health since switching.	1.5	Years	Mixed (Dog)	Dog	53	Pound
EON-164331	4/16/2014 15:48	Canidae Grain Free Pure Sea Formula	Purchased 5.5 oz cans of Canidae Pure Sea formula cat food. Contents included whole peas, which are not in the ingredients list. Several cans had peas. My cat has IBD and is on a limited diet; new/different ingredients can exacerbate his condition. After the first instance, I returned 3 cans to the store where I purchased them. In the second instance, I found 2 cans with peas, both with lot number P3FS06196A, and reported this to Canidae directly.						
EON-164315	4/16/2014 11:45	Waggin' Train Chicken Jerky Tenders	We recent introduced Waggin Train Jerky Treats (chicken) (hereafter referred to as "Jerky") to our dog. We noticed that within 30 minutes of being given Jerky, she vomits. We stopped giving her Jerky and she no longer vomitted. We waited about a week and tried again. She again proceeded to vomit 30 minutes after consuming a Jerky.	10	Months	Cattle Dog - Australian (blue heeler, red heeler, Queensland cattledog)	Dog	53	Pound

EON-164155	4/15/2014 22:36	Natural Balance (L.I.D.) Limited Ingredient Diets Sweet Potato and Fish Formula	On Monday (b) (6), I bought a new bag of dog food for (b) (6). The dog food was: Natural Balance Limited Ingredient Diets, containing Sweet Potato and Fish. She had been eating this brand and type for several years. We opened the food on Tuesday (b) (6), and rotated the older food from the bottom and put it on the top of the new food in a plastic container. On (b) (6) we fed (b) (6) at 5:30. I am thinking that this feeding must of contained ALL of the new food we had just purchased. Around 8:30 she threw-up some of her food, (undigested). She threw-up a total of 2 times before we went to bed. We did not think it was unusual because sometimes she just threw-up for no apparent reason. We did not let her outside unattended because she still had a bandage on her forepaw and we needed to have it wrapped to keep it dry, so when we took her out, she was always on a leash. During the night I heard her cough twice, but did not think it was unusual. When I got up at 5:00 am on (b) (6), she was laying down and there was more throw-up around her and she was also lying in a large amount of liquid stool containing a significant amount of blood. (I did save some of the bloody stool). She was awake, but listless. We moved her to a large towel and tried to clean her up. The smell was unbearable. I have never smelled anything like it before. At 5:30 I called the local ER Pet Hospital and they told me that I could wait until my regular vet opened, or bring her in now. They seemed to think she had an irritated stomach and/or intestine, and she was probably dehydrated. By 6:00 am we decided to rush her to the ER. She had become quiet, and we were not sure she was breathing. Upon arrival at the ER at 6:25 am, the staff determined that she was gone. They took a sonogram of her belly/abdomen, her intestines, and her heart. They were expecting to find fluid, or a large mass, but found nothing. From the time she was fed, until the time she died, there was no explanation or reason for her death, except the new dog food. We chose not to have an autopsy.	14	Years	Retriever - Labrador	Dog	68	Pound

EON-164152	4/15/2014 22:06	Kingdom Pets Chicken Jerky	<p>I gave my dog 2 chicken jerky treats over several hours on Feb. 22nd and he became ill. On the 24th of February at 8:00 am when the Vet opened I called (b) (6) and he immediatley put (b) (6) on IVs as he was dehydrated.. The Vet did the blood work and his white blood count was 1.9. Over several days we kept him on IV and antibiotics and rymadel. The vet told me over the whole period there was no way that (b) (6) would survive. His white count was to low. The Vet thought at first it was leukemia cancer as it came on so quickly. After the 3 days of IVs (b) (6) started to feel better. . My Vet has every thing documented The Name of the clinic is (b) (6)</p> <p>. I have the product. Kingdom Pets Chicken Jerky 48 oz bag with the ingredients inside. Distrubited by Globalinx Pet LLC Newport beach Ca 92660 Telephone # 888-565-7387 Best Used by 12-27-2014 lot # WPKPCK038167 I have the package here at my house and the Vet Bill of \$1800.00 with the vet having all the blood work that was done over the month. This was a very upsetting time and I sat there every day with my dog as he is my precious animal. Please help. I will do anything to comply and get these jerky treats off the market so they do not kill another animal. Mine was to close to death. I will wait patiently to help in any manner necessary. Carry On- and help us .</p>	4	Years	Poodle - Medium size	Dog	13	Pound

EON-164061	4/15/2014 14:03	Milo's Kitchen home-style dog treats	Patient developed excessive thirst and urination with leaking large amount of urine at rest. Blood tests showed elevated serum calcium levels and high normal levels of serum phosphorus, potassium, sodium, and albumin. Red blood cell count and hemoglobin were elevated. White blood cell count was normal. Urinalysis showed a very dilute urine with no overt abnormalities in the sediment. The only change made per the owner was changing treats given to Milo's Kitchen home-style dog treats. Sample given by owner has best used by date of 1/13/14 and serial # 2203HV A.	5	Years	Terrier (unspecified)	Dog	15.4	Pound
EON-163994	4/15/2014 12:21	JERKY TREATS (made in China)	I had been giving my dog, what I thought was the best product, meat rather than grain treats. My dog developed weeping eyes and a rash on his face. The vet could find nothing wrong with the dog, but provided eye drops and steroids. I realized that the eye problem and rash developed after I'd been buying the chicken jerky treats. I stopped the treats and the symptoms disappeared.	7	Years	Chihuahua	Dog	7	Pound
EON-163983	4/15/2014 10:21	Purina Waggin Train Smoky Jerky Snacks	<p>Purchased Waggin Train Smoky Jerky snacks and gave 1/2 a treat to the dog reporting on, and 1 whole treat to the dog not reporting on. Shortly after the dog reporting on began throwing up. There was grass mixed in with the vomit and the dog didn't feel well for several hours.</p> <p>This dog has been known to have seizures, however with seizures he has never vomited. He appeared to have stomach issues and it happened to be after eating this treat. I then looked up the treat online and found that there have been issues with other dogs, but the company apparently revamped the product making it safer. Decided to file a report in case others have the same issue.</p>	3	Years	Greyhound	Dog	20	Pound

EON-163980	4/15/2014 5:30	Iams Proactive Health Large Breed dog Food Chicken Flavor	<p>I purchased Iams Chicken Flavored Dog Food from Sam's Club in (b) (6) in late March 2014 (UPC # 0 1901404884 7). Two days after feeding my dog it developed bloody diarrhea and vomitted (no blood in the vomit). The dog is a 2 year old Akita and is in good health. I brought the dog to the emergency clinic in (b) (6) on Sunday, 13 April and the woman sitting next to me brought in her dog with the same problem - bloody diarrhea and vomiting. She told me that she fed her dog Iams dog food as well.</p> <p>P&G, the manufacturer of Iams dog food had a product recall at the dog food plant in June 2013 due to salmonella bacteria. I don't have the money to have the suspect product tested but believe that my dog's symptoms are consistent with salmonella food poisoning. Maybe the workers in the plant sabotaged the product because P&G will sell the brand to Mars and the plant could be closed? I have a \$172 vet bill because of this food. I have returned the product to Sam's Club but retained a sample for testing if you are interested.</p> <p>Your cooperation to investigate this complaint is appreciated.</p>						
EON-163915	4/14/2014 14:57	Breathies Chicken Breast with Mint and Parsley	Owner purchased a chicken dental treat and fed to dog in February. EON-163783	4/11/2014 17:24	authority chewy dog treats chicken jerky	On (b) (6) we started giving him new chicken ferky. The brand name is Authority Chewy Dog Treats.Made Thailand. One strip of the treat was given every day after his last meal of the day. On (b) (6) he started leaving half of his food in his dish. He started laying around and his daily activities started diminishing. His eyes started looking funnY.All of this happed within three days after he started eating the treats.We took him to our vet on (b) (6) and he was given a blood test. The test revealed that his catalyst dx levels were high and his snap 4dx indicated lyme. The doctor recommented hospitalization for further test on his kidneys. His condition quickly got worse, he was blind and had trouble walking.We brought him home and we was euthanized at the vets on (b) (6)	7	Years	Bichon Frise	Dog	14	Pound
EON-163780	4/11/2014 13:48	Exer-Hides - Beefhide Mini Bones	Dog Beefhide Mini Bones smell strongly of mold and have a grayish color to them. Dog will not eat them (smart dog).						
EON-163771	4/11/2014 13:03	Milo's Chicken Jerky Treat made in the USA	I purchased the Milo Chicken Jerky treats made in the U.S.A. for the first time since the original one was recalled. I gave it to my dog and my dog vomited. I wasn't sure if it was the treats so I waited a couple of days and gave him another one - he did the same thing - he vomited. I decided I was returning them back to Target in (b) (6) so I put them on my dining room table. Low and behold, my fiancé who I didn't tell what happened, called me and said he gave my dog the Milo treat and he vomited it up. I then told him I put them on the table because I was returning them back to the store because the same thing happened to me. What is the problem with these treats? Is it really made in the USA? or is it some type of ingredient being used in the product? This is extremely upsetting that you don't know what to give your dog anymore. Whether it be USA or China there obviously is a problem here.

EON-163757	4/11/2014 6:00	Purina Beneful Original	On Sunday, (b) (6), I took my dog for a walk (her favorite thing in the world). During the walk she wanted to stop and lie down in the street (NOT LIKE HER AT ALL). She would keep walking as long as I let her lie down for a bit every few steps. When we got home I made a vet apt, but my vet was out of town so I had to wait. She seemed lethargic but ok. When she woke up Wednesday, (b) (6) she was having a hard time walking. I felt I had to go onto work, but was going to take her to the walk in vet when I got home. By the time I arrived home she had died. My dogs eat a lot of what I eat and snack on their dog food. But, I did remember that my other dog had eaten Beneful on Monday night, (b) (6). The following morning there was vomit in my kitchen. I narrowed it down to the Beneful. I googled Beneful and was HORRIFIED by what I had found on the consumer affairs web page, PLUS the facebook pages trying to warn people. Why are you all not protecting our animals???? I have not given my other dog any more Beneful and she has not thrown up any more. I now realize that my other dog was probably throwing up outside, so I did not know. www.consumeraffairs.com/pets/beneful.html PLEASE DO SOMETHING! THIS IS ANIMAL CRUELTY!! SOMEONE NEEDS TO BE BROUGHT UP ON CHARGES! Animal cruelty is is a crime!	10	Years	Retriever - Golden	Dog	60	Pound

EON-163461	4/8/2014 12:33	Blue Blue Bones Natural Dental Chews	We fed (b) (6) Blue Buffalo "Blue Bones"one bone per day for four days and she developed vomiting, increased urination, increased thirst, and weakness/lethargy. Taken to the vet and given IV fluids and blood work was taken along with urine sample. She did not improve after IV fluids and required hospitalization for IV fluids, monitoring. The blood work showed an increasd BUN and creatinine, the urine showed dilute urine, and an abdomianl ultsrsound showed a kidney abnormality.	2	Years	Shih Tzu	Dog	12	Pound
EON-163442	4/7/2014 22:42	exer-hides MUNCHY RAWHIDE STICKS	My lab was fed a chew stick that she turned down (twice). She does NOT turn down food ever! All other food she is offered is gulped immediately.	6	Years	Retriever - Labrador	Dog	78	Pound
EON-163430	4/7/2014 19:48	Purina Alpo Prime Cuts in gravy	On the morning of (b) (6) I woke up at 6:30 am to find my dog panting, in distress, and had vomited. Her gums were white and her eyes were sunk in. I then noticed that she was pushing and in labor. Her scheduled C-section was on (b) (6) so I was very concerned at this point. I brought her to the vet at 8am. The vet was concerned about her health at that point and a emergency C-section was performed. The puppy she had was under developed and dead. The vet informed me that she was very ill and had a very bad infection. Prior to that morning my dog had no symptoms of being ill. She did wake up after surgery but died a few hours after.	4	Years	Bulldog	Dog	43	Pound
EON-163427	4/7/2014 19:12	Hillside Farms Jerky Twists and Hillside Farms Munchy Bones	My 7 year old healthy boston terrier was given Hillside Farms jerky twist treats and Hillside farms Munchy bones purchased at the 99cent store in (b) (6). She had them regularly for approximately 2 months and immediately after having a number of these treats in a row had two seizures. The first a major one and then a second one 36 hours later. She has since discontinued the treats and is fine. Her vet and i both suspect that the seizures were induced by these treats. She is otherwise healthy and all of her blood work and physical exam indicate no other subclinical disease. She is currently fine, exhibiting no symptoms at present - one week later. Obviously we have discontinued these treats but will continue to monitor her.	7	Years	Terrier - Boston	Dog	25	Pound

EON-163426	4/7/2014 19:12	4Health Healthy Weight Formula	On 4/2/14 I purchased a bag of 4Health Healthy Weight Formula at Tractor Supply in (b) (6) . I fed it to my lab Wednesday night. Thursday morning he was not feeling good. He ate about 1 cup, vomited. On Friday, he would not eat, vomited several times and was very lethargic. Saturday morning I took him to the vet and his blood count was low, liver was not functioning. I then took him to (b) (6) where they put him on IV and antibiotics and tried to get him up and eating and drinking. By Sunday he was not eating and not walking. The cost to do exploratory surgery, ultra sounds was too much and we decided to put him down. He was fine Wednesday morning and Wednesday night. I think it was the food. A healthy lab suddenly gets deathly sick immediately after eating this food.	3	Years	Retriever - Labrador	Dog	89	Pound

EON-163390	4/7/2014 7:30	Pet Botanics Grain-free Chicken Recipe	I purchased 2 Pet Botanics Grain Feed Chicken recipe 4 lb. log from Pet Smart in (b) (6). I opened 1 on April 5. Topped my dogs food with it, used it as a training treat during the day. Topped and dinner and breakfast with it. By noon on April 6th my Aussie (b) (6) was throwing up, by 5pm my foster (b) (6) was throwing up. The log is the only thing that I changed in their diet. (b) (6) kept gagging like something was stuck and salivating bad. I could not see anything in his throat. I fixed boiled chicken and rice for their dinner which they both ate. Later they both threw some of that up. The next morning I took (b) (6) to VET, she took X-rays, gave him a shot of Cerenia to stop the gagging and put him on Clindamycin HCL incase he had scratched his throat while getting sick. They both had diarrhea by Tuesday so I started them on Metronidazole. I had to take (b) (6) to the Vet on Thursday due to severe watery/bloody diarrhea and not drinking. I also took stool samples from both dogs. (b) (6) was still lethargic. The vet found both dogs had a high number of Clostridium in their stools. I have kept them on a bland diet all week and giving them pedialyte. Its been a week and we are just starting to see them feel better.	3	Years	Shepherd Dog - Australian	Dog	71	Pound
EON-163386	4/7/2014 0:00	Dingos	After giving my dog the rawhide treats from China called Dingos, she started passing blood in her stool and got to where she could not control her kidneys. She had an insatiable want for water, and while drinking water, would lose control of her kidneys at the same time. We took her to four different vets to try to find out what was causing this problem. We spent over \$3000 on tests on her that weren't necessary just because of this treat! There is something in those things that get a pet addicted to them. She would just sit and stare at the cabinet where I kept them stored. She went from a beautiful healthy playful dog to one that could not control her bodily functions her tummy became all swollen and bloated, and her hair started falling out in clumps. This all happened in just a matter of months! We ended up having to put her down because her health was deteriorating so rapidly and no one could figure out what the cause was. In my heart I feel it was these treats because she was a beautiful healthy dog before she got them. I feel like it is my call in life now to spread the word about these deadly treats. Anytime I see someone looking at them in the grocery store I let them know what happened to my dog because of them. I tried to pass the word to everyone I see and know about these things. Laws should be passed for bidding the import and sale of these poisonous treats! Please, please stop letting them kill our beloved pets. These are like our family members and so many people are unaware of the dangers of these things

EON-163323	4/5/2014 3:39	Waggin' Train Jerky Treats	My now deceased Chinese Crested dog (b) (6) developed kidney failure unexpectedly after having eaten Waggin' Train chicken jerky treats and other brands containing chicken likely sourced from China daily for about one year. He lost his appetite, though his thirst and urination increased greatly. He became very thin and it was difficult to get him to eat. He became anemic as part of his kidney failure and had to be hospitalized for blood transfusions and fluids to regain some strength for a temporary period. But his kidney failure was already so advanced by the time it was discovered that he could not be saved. I administered subcutaneous fluids daily for four months to keep him hydrated and kept him comfortable with heating pads before he had to be euthanized. The day he was euthanized, he was having difficulty breathing because the fluids that were part of his treatment entered his lungs and removal would have killed him anyway. He was only 2 years old and had no health problems prior to this. His siblings and parents also had no problems, according to his breeder. However, my other dog of the same breed received the same treats and had no reactions. Please note that the dates given for when the problem started and the date of death are approximate.	2	Years	Chinese Crested Dog & Hairless	Dog	10	Pound

EON-163313	4/4/2014 20:30	Nature's Variety Instinct Rabbit Formula	<p>I started my cat on 3 oz canned rabbit food (Nature's Variety, Instinct) late last year after she developed an intestinal problem that seems to have some food allergy component, and she reacted well to the rabbit diet.</p> <p>I had trouble obtaining the 3 oz canned rabbit food during the 1-2 months where we were having regular snow storms. The local stores were not receiving shipments of this particular size and flavor from their distributor, so I began to try the same brand of rabbit and duck flavors in the 5 oz size (Nature's Variety, Instinct). At that time, I noticed large flat white pieces of material that were hard and sharp enough to pose a threat to my cat's health. My cat did not like those foods anyway, so I returned them to the stores where purchased, reported the problem to store staff, and asked them to report it to the manufacturer and the FDA. One told me they would do this.</p> <p>I tried other brands of rabbit cat food, but none appeared to relieve the cat's intestinal problems, so the cat had to go back on her previous prescription diet that caused her to have runny stools. When the 3oz cans of rabbit became available again, I put her back on that food. I had not seem the white hard bone-like fragments in the 3oz cans before so did not immediately look for them. However, after finding my cat gagging right after eating and finding a similar fragment in what she threw up, I started to look more carefully through the new 3oz cans and found they now also contain not only an occasional larger fragment (at least one more than 1/4 inch), but also many smaller, and some very hard and sharp fragments.</p> <p>At first I was sure these were ground up bone, but they could also be some other ground up hard material. Either way, they pose a hazard to the cat's GI tract.</p> <p>My problem is that is the only flavor of food found agreeable to her intestines, but the sharp fragments could cause other problems. At this time, I am sifting through the food and finding all sizes of this hard and sharp edged material throughout all of the cans I have purchased in the last several weeks.</p>	15	Years	Domestic Shorthair	Cat	6	Pound
EON-163271	4/4/2014 9:27	Hills Prescription Diet I/d canine Hepatic Health	I found a one inch long piece of wood in my dog's Hills Prescription Diet canned food.

EON-163268	4/4/2014 8:57	California Natural Pure and Simple Salmon and Sweet Potato Formula Dog Food	opened can of dog food, used 2/3 of it, found a very hard, sharp piece of bright blue plastic in the bottom 1/3 of food. The piece is about 1/3 inch long						
EON-163252	4/3/2014 23:09	Hill's Science Diet Adult Light	<p>I have two cats, both adults. They both have been fed Science Diet Adult Light for years. A new PetSmart opened in (b) (6) and during their first days of opening I bought a 7 lb resealable bag of it. They both started vomiting. The female cat that I have had for about 3 years, that was the first time I had ever seen her sick. I went to a different retail store and bought a new bag bag of Science Diet Adult Light after I noticed they weren't getting better. They stopped being sick within two days of the new food.</p> <p>Best By Date: 07/2015 UPC: 0 52742 20470 3 Stored at Room Temperature, Sealed Lot Number: R 11 5 0823 HK 345 Weight: 7 lb (3.17kg) Purchase Date: 2/11/14 Location: PetSmart, (b) (6).</p> <p>Each day I use a measuring cup and place in two bowls approximately 1/2 to 3/4 of a cup of the dry food. I fed them out of the bag approximately for 1-2 weeks. There is about a third of the bags contents remaining in there today.</p>	5	Years	Unknown	Cat	6	Pound
EON-163248	4/3/2014 22:15	Hills SD Dry Cat Food	<p>Our 9-year old cat was urinating small amounts and crying. We took him to the vet, and they found small crystals that were precursors to stones. We were recommended to put him on Hills SD dry cat food to dissolve the crystals and prevent forming stones. We did this, and he enjoyed eating it. He then began drinking significantly more and urinating large amounts without complaint. Around a month later, he stopped eating, drinking and using the litter box completely. The vet then tested him, found the crystals gone but his blood sugar abnormally high - he was diagnosed as diabetic. We purchased insulin and began giving it to him, as directed by our vet. We believe Hills SD did solve the problem of crystals but caused diabetes (glucose and ketones in urine, high blood sugar, low insulin). Since removing the cat from Hills SD food, putting him on EVO high protein instead, he has stabilized and currently does not need insulin. I have reported this to Hills Pet Nutrition company and the vet.</p>	9	Years	Domestic Longhair	Cat	18	Pound

EON-163162	4/3/2014 0:27	Hills prescription diet u/d canned food and dry food	<p>Hills Prescription U/D caused developmental cardiac deficiencies in our dog (b) (6). We believe it is unsafe to be used in canines over any length of time. We have extensive medical records for proof of this fact.</p> <p>(b) (6) was diagnosed with urolithiasis in March 2007 and after surgery was prescribed Hill Prescription Diet U/D dry and canned food. This was his only source of nutrition along with baby carrots as treats. On May 15, 2013, he developed an unusual cough which was continuous for the entire afternoon and evening. He woke up coughing at 3:00am as well. The next day I took him to the vet we were seeing at that time. He received an ECG after the vet heard a gallop heartbeat. He was diagnosed with dilated cardiomyopathy and we immediately went to (b) (6) to the cardiology department. At that time, he was diagnosed with congestive heart failure and started on enalapril, LASIX, taurine, L-carnitine , , and fish oil. His diet was changed to Royal Canine, low purine and Hill's L/D at the recommendation of the (b) (6) Nutrition Department. At that time, his cardiologist, (b) (6), suspected that his heart disease was nutrition related. Hill U/D does not have enough of the proper nutrients in it to allow for adequate heart development and function. We knew that several months would have to pass before we knew for certain if this was indeed the case. We took him back to the cardiologist in August and he was showing some mild improvement. We took him again and February and the improvement in his heart function was astonishing. He still has dilated cardiomyopathy but it is improving vastly with his dietary changes. The improvements are not seen with heart medications alone according to his medical records. His long term prognosis is still uncertain but continued improvement is hoped for. It is not common knowledge among general veterinarians that this food is unsafe for long term use.</p> <p>This food should come with a warning label at the very least. I request that it be pulled from the market as it is the catalyst for heart disease and unsafe for canine consumption.</p>	8	Years	Dalmatian	Dog	96.4	Pound

EON-163149	4/2/2014 20:15	Science Diet	<p>We purchased a Large bag of Science Diet (active longevity formula, I believe; the product bag has a Teal Colored Banner) roughly in late November 2013, from Petsmart on (b) (6) (not our usual pet store). We fed both our dogs with this food at the rate of two bowls daily.</p> <p>The dogs were a 11 yo female Labrador retriever (named (b) (6)) and a 16 yo male Keeshond (named (b) (6)). (b) (6) ate the food as served her. (b) (6) refused most of the food he was being given and had to be fed other food.</p> <p>On Saturday, (b) (6), we had a friend feed our dogs while we were away for an anniversary day trip to (b) (6). We returned from the trip at around 11 PM to find that (b) (6) was unable to walk and listless. (b) (6) was also listless and walking with a shaky gait. I took (b) (6) to the (b) (6). The doctor there tested (b) (6) blood to discover that her organs (liver, kidneys, pancreas) were in trouble and she indicated that (to my disbelief) her organs were failing. After two nights of hospitalization, and corresponding blood tests, on (b) (6) we were advised to euthanize her, which we did.</p> <p>(b) (6) was not acting right that week. We took him in to test as he was acting not only depressed, but lethargic and anti-social. We found that his liver and kidneys were also failing. One the advise of the same vet, we might have euthanized him, but sought the advice of an older vet at the same practice. Her name is (b) (6) suggested treating (b) (6) at home to try to "rinse out" and re stabilize his kidneys and liver, but was not optimistic. Two months later, he is well. (b) (6) has said that in 20 years of practice she had never seen two dogs get so sick from one home at the same time. It is with her encouragement and with my continuing grief over (b) (6) that I am submitting this information. I will be more than happy to speak with anyone who wishes t o speak with me about greater detail around this story.</p>	11	Years	Retriever - Labrador	Dog	90	Pound

EON-162848	4/1/2014 21:03	threw away	Dog had distress, kept pacing and panting. Would not eat, sat and stared at wall when offered food. Did not want to be touched or bothered.(normally very playful)Took him to our vet who did bloodwork, xrays, ultrasound. She believed it to be stomach or something he had eaten. He was given intervenous for fluids because of dehydration, pain med and antibiotics\$1500.00 worth of test and meds with no diagnosis. Even had special test for pancreatitis which it wasn't. We believe it could have been from jerky treats with rawhide jerkywrapped sweet potato from Chine.	5	Years	Terrier - Yorkshire	Dog	16	Pound
EON-162817	4/1/2014 15:15	Catswell Vitakitty Chicken Breast Treats with Flaxseed and Vitamins	I received a coupon for a free bag of Catswell treats. I picked up a bag, and offered my seven cats each a treat. Everyone of them turned it down except (b) (6) who ate half of them. He had 3-4 pieces. shortly afterwards he started peeing in the tub, he then started peeing blood. He has been to the vet a half dozen times in the last year, due to issues with his bladder. He has also blocked resulting in emergency visits twice, costing us several thousand dollars. I am most disturbed by the fact that these treats, while they do say they are made in china do so in the smallest of white fonts on a bright yellow background so it is very very easy to overlook.	12	Years	Domestic (unspecified)	Cat	12	Pound
EON-162461	4/1/2014 10:57	Dingo Market Cuts	I fed my dog a chicken jerky treat and within 3 hours she was acting lethargic. The next morning 14 hours later she acted like she was going to throw up drool coming from her mouth. I took her outside and she did vomit and again within 15 minutes she vomited again. I checked to see what was making her sick and found small pieces of the jerking treat. She spent most of the day sleeping on her bed and this morning she seems back to her self wanting to play.						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-162368	4/1/2014 6:27	DasuQuin	<p>My vet prescribed DasuQuin with MSM for my dog's joint health as a supplement to be given daily for 4 weeks and every other day thereafter. I administered this product to my dog for several months with no adverse effects. I ran out of the produce and purchased another bag from my vet. I gave my dot one supplement out of the new bag and I notice that my dog start urinating frequently. For 3 days my dog urinated excessively, much more than normal. On the 4th day I noticed she was walking different and licking that area a lot. Her appetite also increased and she became really hyper. I took her to the vet for a urine test because I suspected an infection. My vet told me the urine test was normal. The next day I gave my dog another supplement. She started urinating blood shortly thereafter. At this point I did not suspect this supplement as the cause of her urine problems. I took her to another vet and was told she has a bladder infection. I got antibiotics and administered them for about 10 days. I stopped giving my dog these supplements while she was taking antibiotics. My dog's condition improved and her urine output decreased somewhat.</p> <p>When I finished the round of antibiotics, I resumed giving my dot the supplements. The same day I started giving her the supplement her urine output increased dramatically and she got really hyper. Her appetite increased dramatically. Two days later I gave her another supplement and I noticed a small about of blood in her urine. I stopped giving her the supplement and her urine output decreased. She continues to have problems with urination but she is not bleeding since I stopped the supplements.</p> <p>Since this problem began my dog has had 2 urine test (normal) X-rays and 2 physical examinations. Both vets say she does not have any stones or urinary tract problems. I have owned this dog since she was a puppy. I love her like a child and I watch over her like a baby. I know her symptoms and habits. I am sure something in this supplement caused this condition.</p> <p>However, my vet can not pinpoint any know kidney or urine problems. While my dog has improved since stopping this supplement, she continues to urinate more than usual and I am fearful that this has damaged her kidneys or worse. I read a news article about the dogs dying from the chicken treats and I am wondering if there is something in these supplements that may be harmful to dogs. I still have the bag of supplements and would like to have them tested. I would also like to know if any other dog owners have had averse affects from the product.</p>	11	Years	Poodle - Toy	Dog	12	Pound

EON-161952	3/28/2014 18:45	Nutro Ultra Holistic Adult	<p>We have fed (b) (6) Nutro Ultra Hollistic Adult food for 3 years with no visible symptoms. In the past week she became nauseous upon eating from a new bag of food (still Nutro Ultra Holistic Adult, purchased in March 2014 in IL) She had bloody stool, and we took her to the vet. The vet did a physical exam and checked vitals, and suggested she had colitis. We put (b) (6) on a chicken and white rice diet for 3 days and she was fine. As we began to add her kibble back into her diet (just a small handful mixed into her chicken and rice), she became nauseous again. Within 24 hours of reintroducing her to Nutro, she was howling in pain, refusing food, unable to defecate, and vomiting. We brought her to the emergency vet, where they did a physical exam and took x-rays. They could find no blockage or foreign object. We put her back on a chicken and rice diet, and her symptoms disappeared. Last night we fed her a small handful of Nutro again with her chicken and rice, and within 12 hours she had diarrhea. We have now removed her entirely from Nutro, and we are certain she is becoming ill from this brand of food.</p> <p>(b) (6) does not receive treats of any kind. She is walked only on a leash, never allowed to roam on her own, as we live in a city. We are very careful that she does not eat or lick anything on her walks, and she is not the type of dog to try and do so anyway. She does not chew on bones or rawhide. She literally only ingests her kibble and water, unless she is on a chicken and rice diet.</p>	5	Years	Boxer (German Boxer)	Dog	58	Pound

EON-161660	3/26/2014 23:30	No package but receipt still. Beef 5oz Pupperoni. From Kmart on 12/31/13. 07910051021	Everything remained constant in our Border Collie/German Shepherd dog, (b) (6). We added Pup-peroni and in December. Beginning in January, we started to see a decline in her health. First a pain in her neck, then limping on one front paw. Went in for tests. Nothing broken, maybe a pinched nerve. Neck brace for a bit. Continual decline and whimpering at night. Much pain. Went for further testing and blood work. Ruled out Cancer, maybe valley fever. Nothing of significance showed in blood panel. Pain pills given for relaxation. Another 2 weeks. Even worse. Still no solution from specialists or Vet. Heard about paralysis and mysterious illness caused by possible contaminated dog treats. Was going to look into it until last night. Our young dog was completely paralyzed and head twitching did not move all night. No interest in water or food today. Put her to sleep today. :-(Kept blood sample to test for possible poisoning. Do not know which one to test for as of it. Holding blood until further information is given.	3	Years	Coolie (German Coolie or Australian Coolie	Dog	65	Pound
EON-161651	3/26/2014 21:06	Pedigree with chopped chicken meaty ground dinner	My dog became lethargic, disoriented, vomiting, bloody diarrhea, unable to get up from bed, had to be carried out to toilet. She became very dehydrated through course of day. Loperamide was administered at home and provided limited relief. I contacted veterinarian, brought stool sample and pet to be examined after giving telephone history. The veterinarian had to administer subcutaneous fluids and an injectable dose of drug to stop NVD. he also provided antibiotic (metronidazole) and alternate food. We were instructed to give her very limited amounts of food along with limited amounts of water as well as with instructions to return to office if she got worse. We were in daily contact wi DVM for next 3 days when (b) (6) finally got up without encouragement and asked for food. She continued to improve until today when she started to have loose stools again after eating some of her pedigree food again.	14	Years	Mixed (Dog)	Dog	10	Kilogram

EON-161600	3/26/2014 13:42	Merrick Whole Health Made Right Grain Free Real Duck+Sweet Potato Recipe	<p>(b) (6) was transferred to internal medicine this morning for consultation regarding her liver disease. See the ER notes for pertinent history and updates until this morning. Today (b) (6) seems lethargic. Blood work showed significant decrease in the ALT value at 408 from 893 two days prior. The total bilirubin increased from 13.5 to 21. Her PCV was 40% at admission (TS=4.9) and were 24%/5.0 this morning. A PT and PTT were normal today. She has been receiving Clinicare liquid food through an NE tube and tolerating this well.</p> <p>The owner reported to me today that she had been feeding her dogs the same food in January when they all developed significant GI problems. She left for a trip and while gone, the problems persisted. She ended up changing the food they were all eating and her other dogs all got better, but (b) (6) continued to have diarrhea and a decreased appetite. This is when her initial set of blood work was performed revealing (Jan. 19) ALT=630, AST=817, ALP=523, total bili=1.3, low-normal BUN at 8, and an otherwise unremarkable chemistry panel, unremarkable CBC, and a normal T4 and negative fecal exam. The owner also reported that (b) (6) has some hairloss at this time. Denamarin seemed to help her feel better for a few weeks but then her original signs got worse.</p> <p>Abdominal ultrasound revealed decreased hepatic mass. Laparoscopic liver biopsy revealed that the liver mass was decreased by 90-95% of normal and was collectively present attached to the lateral ligament in a very small multiple nodular conglomeration sitting over the portal vein. The remaining liver tissue looked miliary and dark maroon in color. There were 4-5 discrete round liver masses which are presumed to be the remnants of each lobe of the right liver. No liver parenchyma could be detected near the gallbladder or between the gallbladder and diaphragm cranially and towards the right body wall. Histology of the liver revealed diffuse severe necrosis, lobular collapse and bile necrosis with pyogranulomatous inflammation (destructive cholangitis). The inflammation is suspected secondary to the necrosis and biliary leakage, not from infection. No neoplastic disease was found. The changes are consistent with acute-on-chronic diffuse hepatic necrosis and the location of the lesions (biliary) is suggestive of toxicity, but is not specific for any particular toxin. Leptospirosis is not likely. Afalotoxiosis is not likely but cannot be ruled out. A drug reaction is possible and the owner reports that the only medication that (b) (6) had received around the time she became ill was Trifexis.</p>	6	Years	Mixed (Dog)	Dog	9.8	Kilogram

EON-161568	3/26/2014 9:51	Royal canin Hypoallergenic Selected Protein adult PV	My veterinarian prescribed Royal Canin PV venison and potato dog food for my dog. Upon using the second case of food, I observed pieces do white plastic in the can. These pieces could have caused serious harm to my 8 lb dog.						
EON-161543	3/25/2014 20:21	Healthfuls Wholesome Treats for Dogs (Chicken Tenders)	As a special treat, I bought Healthfuls Wholesome Treats for Dogs (chicken tenders) on 3-23-2014, thinking that the problems associated with jerkey treats had resolved. She has probably had six of the strips over the last two days. She has had two bouts of liquid diarrhea today that I've observed, so I've withheld the strips (none today 3-25.) She also is drinking more water. This is her second adverse reaction to chicken strips, the first being on 9-29-2012 (Waggin Train Jerkey Tenders). On that date, I took her to a veterinary hospital with a swollen face/eyes. Swelling of her face with large welts happened a second time before I stopped giving her the chicken treats. Again, I expected problems with this product to be resolved by this time.	13	Years	Ridgeback - Rhodesian	Dog	62	Pound
EON-161522	3/25/2014 16:51	Pro Plan Focus Adult Urinary Tract Health Formula	Cat vomited all food, soon after consuming. I have two cats that have fed this product for years. As soon as I began a new bag of Pro Plan Focus Adult Urinary Tract Health, (3.5 pound) One of my cats (4 years old) would vomit all of the food as soon as he ate it. The other cat (11 years old), vomited a few times. This lasted a week, so I switched to a new flavor of Pro Plan, and he has held down the food.	4	Years	Domestic Shorthair	Cat

EON-161447	3/25/2014 14:09	Oxbow Bene Terra Organic Rabbit	<p>I opened a bag of Oxbow Bene Terra Organic Rabbit Food (lot # BEST BY NOV 2015/13330) in February 2014 and noticed it smelled moldy and looked a little different. I tried feeding to my rabbits, and they refused to eat it. I contacted Oxbow on February 19th, they had me mail the bag back to them and sent a replacement. I continued to feed Bene Terra, and came home to find one of my rabbits ((b) (6)) dead on (b) (6) . Today (3/25/14) I opened the replacement bag they had sent and found a large piece of moldy product (approx 1 inch x 1/2 inch x 1/4 inch in size). There seems to be some major quality control issues with Oxbow.</p> <p>About 5 years ago I got a bad bag of Oxbow Bunny Basics-T, that 2 days after feeding to (b) (6) , she become very cold, lethargic, and started turning blue. After spending the night at the emergency vet, she was brought to a rabbit specialist who found nothing wrong with her, and since the only change was the new bag of food that looked different, thought the food might be the cause of what made her sick.</p> <p>I'm not sure if Oxbow food caused both incidents, but when I've received bad bags of food from them is the only time she has gotten sick or died. I contacted Oxbow and they do not seem concerned and are just brushing me off, denying it's mold (even though they haven't seen it), and haven't provided me with any information from the testing they said would be done to the bag I sent in.</p>	10	Years		Rabbit	2.5	Pound
EON-161243	3/24/2014 14:54	Royal Canin Labrador Retriever 30	<p>((b) (6)) had her annual check up in December 2013 vet reported she was in good health. on Sunday evening I brought home Royal Canin Labrador blend that she is feed exclusively, after she ate the food she threw up all up and had several episodes of throwing up afterwards within the hour. She didn't eat for a couple of days afterward. Sunday, ((b) (6)) I came home after church, she met me at the door as usual and while I was putting my keys on the key rack, I saw her collapse, I tried to revive her, but she would not responded, we called the emergency animal clinic but by the time they answered she was gone. We have two other dogs but they had no contact with the dog food. ((b) (6)) had turned 5 yrs. on ((b) (6)) - ((b) (6))</p>	5	Years	Rottweiler	Dog	150	Pound

EON-160873	3/18/2014 9:45	Waggin' Train 22-oz Chicken Jerky Tenders Dog Treats	While shopping at Walmart in (b) (6) on 3/6/14 I noticed that the Waggin' Train 22-oz Chicken Jerky Treats for Dogs was back on the market. (b) (6) likes her chicken jerky, so I purchased two bags. On 3/7/14 I began giving her 1/2 a treat about 5 times a day. By 3/11/14, (b) (6) was very lethargic and didn't want to get up. Her eyes were dull and she didn't want to eat. Also, her breathing seemed more rapid and a bit labored. I was picking up her poop from the backyard and noticed that her stools were loose. I analyzed what might be happening and identified the only change in her diet as the inclusion of the Waggin' Train treats. So, I stopped them. Within 24 hours, (b) (6) perked up; her appetite improved; her eyes sparkled; and she was enjoying her walks once again. I cannot conclusively say that the treats caused her illness but it just seems much too coincidental.	6	Years	Collie - Border	Dog	72	Pound
EON-160852	3/17/2014 21:54	Diamond Pet foods Naturals Grain Free chicken and sweet potato formula for dogs	dog has been getting Diamond natural grain free chicken and sweet potatoe for several months. Owner bought a new bag of same food from a different store on 3/10/2014. Owner mixed in old and new food Tuesday night. Gave new bag of food Wednesday morning. Wednesday evening was fed new bag of food and 2 hours later, vomited food. Dog continued to vomit about 10 times until Thursday morning. Went to (b) (6) that morning. Treated with fluids and anti emetics. Started bland diet for Thursday and Friday. ON Saturday March 15, 2014, owner attempted food again. Two hours later, dog vomited twice. All the food that was fed to her. At this time, stopped giving the good and continued with bland diet. Was eating bland diet (I/D canned) fine Thursday, friday, saturday and sunday. Owner bought a new brand of food and dog has been doing great. I called the store where the food was purchased. Manager had stated no problems have been reported. I asked about possible tainted bag or salmonella and manager told me that 'dogs do not get salmonella'.	3.5	Years	Shepherd Dog - German	Dog	68	Pound
EON-160848	3/17/2014 20:45	Masters best friend all natural duck jerky	two hours after eating the product pet became lethargic,deep breathing, anorexic, and muscle twitching. EON-160819	3/17/2014 15:24	Blue Wilderness 100% grain free Turkey and Chicken Grill	My two dogs are on the Blue Buffalo "Wilderness" product line. I use dry kibble and combined it with the canned food. Recently I opened a can of "Wilderness Turkey and Grilled Chicken" and noticed something shiny in the middle of the can. I picked it out and found that it was a piece of metal (small triangular 3/16th of an inch). I checked the remainder of the can and did not find any other pieces of metal.						
EON-160816	3/17/2014 14:57	20 pigs ears	I purchased a box of 20 pigs ears from (b) (6). One 'pigs ear' is clearly a piece of cooked corrugated cardboard and not as sold. It's is the same colour as it appears to have been cooked in the same way but is a totally different shape from the pigs ears. How this can be sold without any basic visual checks, I can't understand. Luckily I managed to spot this before feeding it to my dog so have prevented any harm to my pet. This is the address of the company the original box was purchased from: HOLLINGS LIMITED, Snaygill Industrial Estate, Keighley Road, Skipton, North Yorkshire, BD23 2QR						
EON-160791	3/17/2014 10:15	Hartz Chew'n Clean Durable Chew Toy with Edible Center. Bacon Flavor. Small Dog.	The owner gave him and 2 other dogs this treat, and (b) (6) and one other dog reacted with vomiting and diarrhea shortly after. The other dog recovered on her own, but (b) (6) continued to have vomiting and red to brown, liquid diarrhea on the hour until he presented to the clinic the following day. He was very lethargic and dehydrated upon presentation, and he was treated symptomatically with fluids, anti-emetics, antacids, anti-diarrheals, and eventually antibiotics. He attempted to vomit while in the hospital, but his stomach was empty and hardly anything came up; he did have a small amount of diarrhea. He was hospitalized overnight, but went home the next day; he was coaxed into eating a small amount before leaving. A phone call was made to the owner a few days later to check on him and the owner said that he was much better. I assured her I would report the incident to the FDA.	7	Years	Basenji	Dog	39	Pound
EON-160742	3/16/2014 21:51	Jerky treats duck flavored	Gave jerky treats for few days, simba started to develop sores on ears and feet, thought it was cold exposure but then sluggish behavior, no appetite, breathing heavy, took to vet, only elevated results was liver enzymes and temp. Put on antibiotics, got worse, falling over and more weight loss, put on steroid and started to improve, now back to normal behavior and weight. Ears are healing and no sores on feet. Eating normal food again and playing	12	Years	Mixed (Dog)	Dog	50	Pound

EON-160716	3/15/2014 22:45	Blue Buffalo Freedom Grain Free Indoor Chicken Recipe adult Dry Cat food 2lb bag	Has been on blue buffalo Simple for a couple of years without incident. Purchased a small bag as pet food store was out of the large bags I usually purchase. My cat started with the bag and noted to be throwing up some, occasionally she needs laxatone for GI tract with fur ingestion. This was given she started vomiting with increased frequency one the bag was complete (likely vomited most of the bag) over the course of 2 weeks and became critically ill. Her veterinarian gave us a grave prognosis and noted her BUN was at 179 without a relative shift in her creatinine Phos was highly elevated and other electrolytes extremely low. White count was also very high at 31k and she also has palpable lymph nodes in her abdomen. Throughout her illness she never was noted to have diarrhea. After 3 days of hospitalization intensive IV hydration, phosphate binders, antiemetics, antibiotics she had repeat labs which all appeared to normalize. The Vet was puzzled and dumbfounded. I was encouraged to report my experience as the etiology for my cat's illness remains a mystery. She will need close monitoring and follow up but it appears for now she will recover.	10	Years	American Shorthair	Cat		Pound
EON-160700	3/15/2014 15:21	Blue Buffalo Healthy Weight Chicken and Brown Rice	After opening a new bag of Blue Buffalo Healthy Weight, Adult, Chicken and Brown Rice she started to vomit within 2 meals, then got diarrhea so bad it was almost pure blood. She had to go to the vet 3 days in a row. One day she was hospitalized to receive intravenous fluids. My other 5 dogs also got sick with vomiting and diarrhea, however my chihuahua was the sickest. I am only sending in 1 report for my chihuahua. My other dogs are another chihuahua (younger and larger), 2 jack russel terriers, a beagle mix and a lab/pit bull mix. None of my dogs could eat for 4.5 days, then only home cooked chicken and rice. All had to have antibiotics. I did contact Blue Buffalo (3 times) using the email form on their site but got no reply. Almost a week later I took it to Facebook, I really didn't want to go public but that did work and I had a reply within 1 day. I was told they had sent me numerous emails and I needed to check my spam folder, to which I replied honestly that I had checked my inbox and my spam folder daily and had received nothing from them at all. From messaging on Facebook, I am told they are mailing me a claims form which will be nothing but a waste of my time. From what research I have done online, they'll just deny my claim later and then I'll not get any reply from them again.	9	Years	Chihuahua	Dog	5.5	Pound

EON-160697	3/15/2014 13:48	Cadet Gourmet Duck Breast 2.5 Lb value pack	<p>Unexplained illness, approximately one day. Violent, voluminous, and repeated vomiting where vomitus (after all food had been vomited) turned to a clear, frothy liquid and seemed to contain little flecks of stomach tissue flecked with blood. This continued for several hours. This event is the only time we have had to contain our dog in the bathroom overnight because of the duration of vomiting.</p> <p>This occurred a couple months ago and I can't recall whether he had drunk a lot of water first but given the amount of vomit, it seems likely. I am prompted to write after reading CDC's Epi-X posting about the just-announced Epi-Aid to investigate this problem and I thought - hey, that might be what happened to my dog! When he got sick, we really scratched our heads because he always eats the same dog food and has 2-3 duck breast jerky strips as his treat each night and nothing had varied. He rarely 'gets into things' and we couldn't think of anything that could have made him sick. Also, I have always felt a little wary of Chinese dog products.</p> <p>The date below is approximate (probably +/- 1 month).</p>	9	Years	Mixed (Dog)	Dog	50	Pound
EON-160663	3/14/2014 22:00	Candidate all life stages	Explosive yellow stool in 6 or 7 areas of living room. Repeatedly now for 5 days even though Monday was last ingestion of food.	11	Hours	Saint Bernard Dog	Dog	120	Pound

EON-160223	3/11/2014 11:48	Nature's Variety Instinct Limited Ingredient Diet Duck Formula	I purchased a 3 oz. can of Nature's Variety Instinct Limited Ingredient Diet Duck cat food, with a best by date on bottom of can of September 28, 2015. Also stamped on the bottom of the can is 23ULM4 1434. The can was purchased at Petco, (b) (6), on March 10, 2014. I am concerned at finding bone fragments in the food. There were pieces readily visible upon opening the can and I found others as I spooned the food out of the can and spread it in my cats' dishes. They felt hard and sharp. I am concerned that they could cause choking and/or internal laceration. I have emailed Nature's Variety via their company web site. I don't know if this problem is limited to this batch or if it is a more chronic issue, as this is the first time I have purchased this product.						
EON-160216	3/11/2014 10:09	Beneful Baked Delights Hugs, Beneful Healthy Smile	Dog vomits from Beneful Baked Delights and Healthy Smile treats.

EON-159696	3/6/2014 10:00	Evolve Puppy Formula Natural Dog Food with Added Vitamins and Minerals	We started feeding our 6 month old puppy Evolve Puppy food thinking it was better quality since it had no by-products. Within 2 days he had diahrrea but we assumed it was the normal adjustment to a new food. But several days later he had very watery diahrrea and vomited a couple times after eating which was very unusual. We switched him to another brand (Pedigree) and within 24-48 hours he was back to normal. Our 9 year old (b) (6) has always been able to eat any food and never has any adverse reaction to food changes so we thought he could eat this food. Again, within 24 hours he had very watery diahhrefa and also vomited. We think there is something very wrong with this food. After looking online we saw other dog owners had similar problems with this food. Watery diahrrea is dangerous for dogs, especially puppies for whom this food is supposed to be formulated. Our puppy was dehydrated and listless until he was back on another brand (Pedigree Puppy). He also had no issues when we fed him Purina Puppy Chow so we definitely think something is wrong with this food.	6	Months	Brittany	Dog	15	Pound

EON-159228	3/3/2014 19:03	Black Forest rabbit & Blueberries Entree	<p>I have been purchasing Addiction Blackforest Rabbit & Blueberries canned cat food for a year now. In my last order from Chewy.com, I noticed that the food was different than usual. I have contacted Chewy.com as well as Addiction Foods (info@addictionfoods.com) regarding the issues. This are the problems I have seen with this batch of cat food causing me to believe that the manufacturing facility has very low QC standards and that possibly what is in the can is not rabbit at all:</p> <p>1) The food contains white/yellow blobs on the surface, I have never seen this before with the previous 10-15 cases I've purchased.</p> <p>2) There is an excessive amount of FUR in the food. The manufacturer agreed that fur should not be present in the food as it is not in the ingredients.</p> <p>3) There are no blueberries in the food, typically a can used to have about 5 blueberries in it.</p> <p>4) There is a strong smokey, pungent smell that I have never noticed before in the previous 10-15 cases I've purchased. My cat used to eat this food every day and now she wont go near it once she smells it. This food was out of stock for a long time nationwide so I am suspecting that either this may no longer be rabbit in the cans or other rabbit parts not used before in order to fulfill demand. Addiction Foods confirmed that nothing in the ingredients has changed but my cat and I both recognized something different in the smell and appearance.</p> <p>5) The cans are very dirty on the outside so much that I have to place them on paper towels so that they don't come into contact with my kitchen counters. There is an oily film on the bottom of the cans and it leaves a black ring on the paper towels.</p> <p>I have taken photos should you required them. FYI the expiration of the food is January 2017.</p>

EON-159176	3/3/2014 12:42	Milo's Kitchen Homestyle Chicken and Meatball Dog Treats	Pet was given Milo's Kitchen Homestyle Chicken and meatball treats on 2/27/14. By morning of 2/28/14 she was deathly ill. Was rushed to the veterinary clinic and was lethargic, vomiting, bloody diarrhea, low temperature of 98 degrees, breathing hard and cold, pale gums. CBC/panel showed high RBC's, HCT, MCHC, PHOS,TP,GLOB,GGT and LIPA. ALT (SGPT) also extremely high. She was immediately treated for possible Salmonella poisoning caused by the Milo's Kitchen Homestyle Chicken and meatball treats LOT #79100-50890 with IV fluids, Two injections of antibiotics (IV Penicillin and SQ Baytril), x-rays and was monitored by the vet throughout the day. She responded quickly to treatment and rebounded quickly. I picked her up from the vet's office at 6:30 PM 2/28. She is being treated with oral Cipro 1000 mg per day as are the other 4 dogs who were exposed to these treats. She was given the most amount of treats as compared to the other dogs that ate them. Vet bill = \$685.74.	4	Years	Retriever - Labrador	Dog	49.7	Pound

EON-159133	3/2/2014 12:30	Nutro Max Cat ¿Adult: Seafood & Tomato Bisque Chunks In Sauce ¿	<p>Around 4:15 p.m. EST I fed my cat a can of Nutro Max Cat ¿Adult: Seafood & Tomato Bisque Chunks In Sauce,¿ which is one of her all-time favorites. Then five hours later she became violently ill. Around 9:30 p.m. my cat began howling in pain in the bathroom. She got sick and was frequently vomiting all over the rug near the sink. Worse yet, she would try climb in her litter box to defecate and nothing would come out, and repeatedly she would vomit up copious amounts bile afterwards. Likewise, she was drooling on the floor while howling in agonizing pain. This went on for the next few hours without reprieve, and I decided I needed to contact my local animal clinic to take her in immediately for an emergency examination.</p> <p>I arrived at the clinic about an hour after they opened up, and rushed my cat inside. I explained to the veterinarian who handled my emergency that my cat couldn¿t defecate, and had been vomiting for the past few hours in great pain. So they took x-rays and performed a series of tests to determine if there was a blockage or not. They were thinking she had swallowed something she shouldn¿t have, but this was never the kind of cat who would do something like that.</p> <p>The x-rays confirmed there was no blockage in her digestive tract, so the veterinarian gave her two enemas in an attempt to get her flowing again. We both agreed that it must have been something she ingested that caused this sickness. I came back six hours later, and picked up my cat and brought her home for the weekend. She even had two bowel movements that were like black tar. However, she was still very listless, although the veterinarian said that all of her levels were good. So I figured she just needed to sleep, and I gave her plenty of liquids, as she was displaying signs of polyuria and polydipsia. However, her health really started to decline, and she was acting very lethargic, and would often go</p>	7	Years	Domestic Shorthair	Cat	12	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>into a catatonic state. This is when I had to start force-feeding her water all the time the next day. Likewise, tachypnea was setting in, which later turned into acute dyspnea by late Sunday night. She was whimpering in pain, and there was nothing I could other than to stroke her fur, and tell her to hang on.</p> <p>Finally, she died screaming in severe pain the other morning before I could transport her back to the veterinarian; hence, she fell over in a convulsive fit that lasted for about 20 seconds. Then she tried with all of her strength to stand up, but fell with a thud on her right side. Ultimately, she died, and her life was over like a light switch had been turned off. It was the most ghastly site I have ever seen in my entire life. There was white bloody foam pouring out of her nose and mouth in onto the towels she was on. I am so emotionally upset beyond words to describe the grief, and agony that I couldn't do anything to save her life.</p>						
EON-159131	3/2/2014 11:57	Rachael Ray Nutrish® Real Chicken & Veggies Recipe	After getting a new bag of Rachael Ray's Nutrish, my dogs became sick and began to throw up and have diarrhea. I thought maybe I had given them some chicken as a treat earlier that day, and their tummies weren't used to it. However, my dogs have started to avoid eating at times, thrown up and have diarrhea on and off. I'm not sure if it's the food for sure, but this is not normal for my dogs.	3	Years	Other Canine/dog	Dog	30	Pound
EON-159069	3/1/2014 9:48	Authority Chicken Jerky Chewy Dog Treats	I bought Authority Chewy Chicken Jerky at Petsmart in January and gave some to our dog. A day or so later she developed some mucousy stools with blood in them. When she didn't get better after a few days I took her to the vet. The vet said it was probably something she ate or something she scarfed up on a walk and didn't say anything about the new treats even though I told her about them but I've never seen the treats in our town (I got them in another town - (b) (6) -- an hour away.) I updated her shots at that time. (b) (6) recovered about a week later. I never gave her the treats after that and forgot we had them. A couple days ago my husband found them and gave her two and now she is having the same symptoms of bloody mucous stools, plus vomiting, drinking loads of water and having to go out to pee more often. She has not been on any walks in over a week so we know that she didn't pick up something outside the house. (She is always on a leash when she goes outside as our yard isn't fenced.) The treats are going into the garbage. I hope she recovers again but right now she is feeling really punky (bad).	7	Years	Terrier - Airedale	Dog	70	Pound

EON-159042	2/28/2014 17:57	Blue Buffalo Life protection formula Large breed adult chicken and brown rice formula	Purchased a new bag on 2/7, started feeding 2/9. on 2/12 and 2/13 ^{(b) (6)} had uncontrollable diarrhea in his room. I took him to the vet on 2/13 and he was given medications and lab tests. He also had very bright yellow/orange cloudy urine with a strong odor. We began a vet diet supplemented with home made meals. on 2/21 I made another purchase of vet food and on 2/25 began mixing in his regular Blue Buffalo food to transition him back to his regular diet. He began the full diet of Blue Buffalo on 2/27. On 2/28 he began having diarrhea again with the consistency of thin cake batter. It also had a foul odor, sour and very strong. I contacted the manufacturer to report the problem and to see if they had any change in the manufacturing process or formula changes. We have removed the food and are again feeding a vet diet supplemented with home cooked meals until he heals and we can move him to a different permanent diet. EON-158570	2/26/2014 14:57	Purina Waggin Train Jerky Duos	<p>Dear Sir or Madam-</p> <p>By way of introduction, my name is (b) (6) and I am a pet owner from (b) (6)</p> <p>My dog (b) (6) died unexpectedly (b) (6) 24 hours after consuming a Purina Waggin Trail Pet Treat Friday afternoon.</p> <p>(b) (6) was 9 years old, 11 lbs and in very good health prior to consuming the pet treat and the morning before death her activity level was normal (stairs, input/outputs nl, no signs of pulmonary congestion ¿ eg cough) and had no congenital heart defect or co-morbidities (other than a well monitored asymptomatic MVP) and received regular wellness visits and checkups and was treated with Frontline and Heartguard Monthly. She presented Sat AM to the Vet with labored breathing and the initial r/o was partial airway obstruction/gastritis but post CXR was cardiac as the CXR demonstrated a CHF presentation with cardiomegaly, pulmonary congestion, etc. and vet said to r/o chordinae tendane. Her labs showed increased ALT (169) and decreased AMYL (177). The vet was shocked at how fast she decompensated¿she went from a working diagnosis of airway obstruction/gastritis to acute cardiac to offering me the option of ¿putting (b) (6) to sleep¿ within an hour and rushing me out the the Pet Hospital in (b) (6).</p> <p>I am not convinced her death was coincidental¿this was the first time the Purina treat was introduced and my other Shih Tzu did not consume it¿in fact he found it repugnant! Unfortunately (b) (6) did and 3 hours later (6pm Friday afternoon) I found her sitting in vomit, lethargic and suspected she had an allergic reaction to the treat. I gave her 5 mg of diphenhydramine as I had in the past and she calmed down; however by 11 pm she was</p>	9	Years	Shih Tzu	Dog	11	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>breathing heavily so I gave her the heimleich thinking she had a partial airway obstruction from the treat and she seemed to improve. She was still ambulating (albeit slowly) and went to the water bowl (b) (6) drink some H2O, more than usual. I put her to be with her littermate (male shih) and went to check on her throughout the night. She seemed more lethargic and breathing more heavily (no cough) and I called the vet at 8 am. As stated above, she decompensated quickly from there and progressed to arresting in my arms and upon arrival to the Animal Hospital was unresponsive to CPR and pronounced DOA.</p> <p>I called Purina. They assured me the product was safe and produced in the USA using new Quality Assurance processes and chicken not sourced from China. Sadly, I was not aware of the 2013 Q4 recall and they assured me that the product I purchased was safe and produced Jan 2014 and newly placed on the shelves. They ran the lot and batch and said there were no other consumer reports or complaints. I told them I thought it was too early to see a signal from the field as the product was newly released to the public. I called my local Shop Rite and they were going to follow up with Purina and confirmed from running the UPC that I was the only purchaser of the product as it had just been placed on the shelf that week.</p> <p>I am greatly concerned about the safety of other dogs and my family is heartbroken.</p> <p>I am reaching out to you today as (b) (6)'s body is with the (b) (6) Animal Hospital. I would like to move forward with a necropsy, tox screen and full analysis of the Purina Product by an independent lab. I am planning to pay for these services myself and have reached out to the (b) (6) Vet Hospital for assistance and they are guiding me forward. I also</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>reached out to my state's (b) (6) Division of Animal Health/Agriculture.</p> <p>I apologize if I sound like a crazy woman from (b) (6). This was such a tragic, unexpected, violent progression to an untimely death that I am looking for answers. It may just be that (b) (6) died of natural causes; however, given my modicum of medical background and training, I cannot be assured that her seemingly unnatural death was not secondary to some poison she acutely came in contact with. I just need to investigate this a bit more so that my family and I may move on to closure.</p> <p>Thank you in advance for your guidance and kind consideration.</p> <p>(b) (6)</p>						
EON-158558	2/26/2014 13:42	Dogswell Vitality chicken breast with flaxseed and vitamins	Owner purchased new Jerky treats within a week of seizure like activity which occurred on 2/22/14. EON-157764	2/20/2014 21:00	Purina Beneful Dog Food	Since feeding her this batch of Beneful dog food, she did well up until 3 days (Feb. 17, 2014) ago when she started refusing to drink water and was having constant diarrhea. I started fixing her plain steamed rice and boiled chicken and she seemed to do better with 1 solid bowel movement today (Feb. 20, 2014), but I fed her a little bit of the Beneful with the chicken and rice today, and now the diarrhea is back again.	9	Years	Other Canine/dog	Dog	70	Pound
EON-157681	2/20/2014 16:51	Purina One Smart Blend Healthy Metabolism	I fed my cat a new dry cat food (Purina One Smart Blend Healthy Metabolism "new") on February 15, 2014. I gave her 1/4 Cup in the morning (from Feb 15 to 18). She had never had this food before. About 24 hours later she started to vommit, once or twice over the next couple of days. I thought it might be hair balls, so I was not too concerned. On February 18 she was still vommiting, about 3 - 4 times a day, no hair balls in sight. That eveing I noticed she had bad gas and her stomach was hard and distended. Her stool was also lose, but not quite diarrhea. That evening I stopped feeding her the Purina One and gave her a different dry cat food (Fancy Feast Dry Gourmet with Ocean Fish and Salmon) that she has eaten in the past without any symptoms. She vommitted three more times on February 19. That evening I did not feed her anything. She did drink a lot of water. During this time my cat was lathargic and not acting like her normal self. The morning of Febrary 20, she vomitted again, but this time it was clear. She appeared to be feeling better and was friendly and purring (her old self). I also want to mention that during this entire time my cat was also eating about 15 Temptations Cat Treats each morning and 1/3 of a can of Fancy Feast in the evening. She has been eating these foods for the last seven years without any issues. The only change in her diet was the Purina One Smart Blend Healthy Metabolism dry food. I'm going to watch her over the next few days and see if her symptoms improve since removing the Purina One from her diet. She does seem a bit better today. My concern is that this food may contain poor quality ingredients and/or is contaminated with a pathogen (Salmonella), so I wanted to report this to the FDA.	11	Years	Domestic Longhair	Cat	16	Pound

EON-157455	2/19/2014 13:03	Dingo American Made Market Cuts Chicken Jerky 8in1 Distributed by United Pet Group Cincinnati OH	(b) (6) was presented by owner for examination at my veterinary clinic on 2/13/14 with a 3 day history of acute onset increased thirst and urination, anorexia, and one vomiting episode. Blood work and urinalysis revealed Fanconi's-like syndrome. There was gluosuria without corresponding hyperglycemia. BUN and Creatinine levels were normal. Owner was questioned about use of jerky treats and stated that (b) (6) eat one everyday, "that it's the only treat he'll eat." Owner was told to stop giving the treats and to bring me the package with remaining treats. There is no other exposure to toxins and the owner is retired and stays home most of the day with his dog. The dog is on a leash to go outside (supervised). Patient was stable and was treated as outpatient with antiemetics and antibiotics. At follow up call on 2/14/14, owner stated that appetite had improved and drinking was decreased. Recheck on 2/18/14, owner states the dog was much better. Signs were diminished, but overall thirst was still higher than normal. Bloodwork showed normal kidney function, but urinalysis showed glucose, and now WBCs, and casts--indicating renal tubular damage. Recheck is scheduled for one week.	5.5	Years	Terrier - Rat	Dog	24	Pound
EON-157410	2/18/2014 19:54	Freshpet Deli Fresh Slice & Serve Dog Food Roll: Chicken Vegetables and Rice Formula	I've been mixing FreshPet with Nature's Variety kibble for several months. Recently, my dog vomited both of her daily meals for two days. I took her to the vet, who administered an anti-nausea medication, prescribed an easy-to-digest wet food and suggested a transition to a kibble with a different protein to solve a separate issue (suspected allergies). After three symptom-free days, I decided to mix some of the leftover FreshPet with the new kibble, as my dog needed additional time to adjust to her new food, and she vomited again that night. Hence, I assume FreshPet was the culprit of both the initial and subsequent vomiting.	3	Years	Pug	Dog	20	Pound

EON-157368	2/18/2014 2:24	Temptations Mix Ups	<p>After consumption of whiskas Temptation mix-ups my cat began crying loudly and experiencing intractable vomiting. I took her to (b) (6) [REDACTED] Where she was examined on 2/17/2014. We chose a conservative treatment after explaining that after she ate the treats that she felt sick to her stomach and she received a 150ml bolus of fluid subcutaneous, including a famotidine shot and Cerenia inj. We were instructed to also start her on antibiotic Metronidazole 100mg suspension. My cat continues to have episodes of vomiting and will be returning to the veterinary hospital first thing in the morning. I have given my cats these treats for the past couple of years and noticed that for the most part she would not eat them or get sick intermittently but would usually get better. They received the treats on a daily basis. This needs to be investigated or at least come with a warning label. I am completely appalled at the lack of investigation regarding whiskas temptations treats.</p>						
EON-157317	2/17/2014 11:09	Innova Adult Dog Food Small Bites	I noticed that (b) (6) was not active and would not leave her crate. She would not interact with me, when I call for her and she would not eat her food. This went on for almost a full day until around 6:00 p.m. when she finally ate some of her food, which she regurgitated. She would not eat any of the food yesterday.	7	Years	Bichon Frise	Dog	12	Pound
EON-157303	2/16/2014 23:33	9 Lives Ocean White Fish & Tuna Dinner	I found two cans from same 4-pack of 9Lives Ocean Whitefish and Tuna Dinner with green liquid and blackened areas on the meat, very disgusting. I did not feed it to any cat or animal. There are two cans unopened. I think this may be a potential hazard to cats and wanted to report it. I sent an email to 9 lives via their safety portal. The 4-Pk #P517310F Barcode # 793101 The individual cans had a double stamp code 3214BC A1WWB1413 3214BC A1WWB1412 Best by date was 08 12 16 and the other can had 3214BC A1WWb1413 3214BC A1WWB1413 Best by date 08 02 16. On the back of each can appears to be an indented area that may have been struck by the machine when dates were stamped.

EON-157301	2/16/2014 22:12	Purina Cat Chow Indoor Formula	On Monday February 3, 2014 I bought an 18.5 pound bag of Purina Cat Chow Indoor Formula from Sam's Club in (b) (6). Both of my cats have consumed this indoor formula for 2 and 4 years, respectively. This bag of food was opened on that Monday and fed to the cats. Saturday night (February 8) around 10:00 PM, (b) (6) (age 2.5 years) began vomiting. By Monday morning, (b) (6) had vomited approximately 15 times and had not been eating, drinking, or using the litter box and was isolating himself by laying in closets and under beds. (b) (6) was taken to the vet on Monday February 10 and diagnosed as being constipated and dehydrated. (b) (6) was administered fluids, given acid reducing medication and pain meds. By Tuesday morning (b) (6) condition had not improved so he was brought back to the vet, at that point he had passed some of his stool but remained dehydrated. He was kept at the vet for the day for observation and to receive additional fluids intravenously. Tuesday night (b) (6) began to eat again and became more of himself again. As a precaution, (b) (6) was returned to the vet for the day on Wednesday for observation and was also given additional intravenous fluids. The ultimate diagnosis for both cats was that they have/had pancreatitis, and the timeframe of the new bag of food being served and when the cats got sick may be indicative that there was a problem with the food. At the time of writing this (Sunday February 16) (b) (6) is back to normal and appears to be doing well. I would also like to note that both cats were examined by the Vet on February 1, 2014 for their annual shots and check-ups and were given clean bills of health.	2.5	Years	Domestic Longhair	Cat	14	Pound
EON-157289	2/16/2014 14:48	OI' Roy Jerky Sticks	vomiting, loss of appetite, no activity... no his usual self. Head down, tail tucked.	7	Years	Chow Chow	Dog	70	Pound
EON-157217	2/14/2014 16:09	Dingo American Made Market Cuts CHicken Jerky	Starting in December 2013, the dog started having signs of urinary tract infection. The patient has had a history of this previously, so we treated as though it were a routine UTI. The dog's infectious signs resolved, but the dog began to urinate more frequently and over the last 2 months the urine has become progressively dilute and began to have glucose in the urine with a normal blood sugar (repeated twice). I asked if the client had given any chicken jerky treats. He had only just prior to the symptoms purchased and just finished a bag of Dingo American Made Market Cuts chicken Jerky, labeled as made in the USA. On questioning he said this was the first and only bag of chicken jerky treats given. The dog has evidence of fanconi syndrome. Tests are currently underway to repeat urine culture and sensitivity. The remaining lab tests were normal at this time, BUN/Creatinine were normal. The only abnormality was normoglycemic glucosuria.	8	Years	Bulldog - French	Dog	25	Pound

EON-157184	2/14/2014 13:00	Nutro Natural Choice Lamb and Rice	We have been feeding (b) (6) Nutro since we got her as a puppy and she has been eating Nutro Natural Lamb and Rice for at least a year. She is never fed any table scraps. She only received her food, water, tiny pieces of treats (usually Milkbone) and ice cubes. We started a new bag of Nutro Natural Lamb and Rice on Saturday. That evening she threw up her food. Then she threw up bile on Sunday morning before eating. To help calm her stomach, we fed her beef and rice and chicken and rice for a few days and then transitioned her back to her food. After she was up to a half bowl of Nutro and half chicken and rice, she vomited with blood in her vomit and she had blood in her stool. We took her to the vet ER and they diagnosed gastroenteritis. They did x-rays and found no blockages. She was on anti-nausea meds for a few days, as well as an antibiotic and anti-acid for 5 days. She was also eating beef and rice at the time. After she finished her meds and seemed okay, we transitioned her back onto Nutro about 6 days after the vet visit. When she was eating about half Nutro, half beef and rice, she again vomited with blood clots in her vomit. We took her back to the vet and the vet believed it was not infectious. They offered to do blood work and keep her, but since she seemed in good spirits besides her gastrointestinal issues, they thought it would be fine if we tried some more anti-nausea meds and instead tried ID prescription food. She has now been eating that for several days and is better than ever. She is a young, generally healthy dog and I believe that her gastrointestinal issues were due to this new bag of Nutro. We take her outside in our fenced yard on a leash since she's been sick to make sure she isn't getting into anything as well. We of course can't prove that it is her food making her sick, but all of our experience with it seems to point to that.	2	Years	Pit Bull	Dog	60	Pound
EON-157170	2/14/2014 10:30	Happy Hips	(b) (6) stopped eating on her on about 10 days after starting the Chicken Jerky treats. Happy Hips	2.5	Years	Dachshund - Standard Smooth-haired	Dog	7.6	Pound
EON-157142	2/13/2014 22:57	Ever Pet Cat Food Indoor Formula	Two days after purchasing EverPet Indoor Cat Food the cat began vomiting continuously. He is lethargic almost unable to move, yet unable to sleep. He was taken to the vet today and at this point it is unclear if he will survive.	4	Years	American Shorthair	Cat	10	Pound

EON-157029	2/13/2014 10:00	Authority experts in nutrition Chewy Dog Treats Sweet Potato & Chicken Wraps	Gave (b) (6) "treat" from newly purchased brand/bag from Pet Smart. He was sick vomiting for 2 days but we did not immediately link this to his treats. He recovered and approx 1 week later we gave him one treat and a few hours later he started vomiting again. This is his 2nd day vomiting, lethargic...he is drinking a tiny bit of water and has urinated but am watching closely and if he doesn't drink in next couple of hours will take him to Vet ER. We are in the middle of a blizzard right now...but found a vet hosp still open 24 hrs. The store (Pet Smart) where we purchased dog treats is closed but plan to call them asap after storm. I also plan to notify the manufacturer (Authority pet foods)	9	Years	Terrier (unspecified)	Dog	55	Pound
EON-156949	2/12/2014 12:51	GNC Pets Multi-Tastic Oral Care Dental Bones	In the late afternoon of January 8, 2014 I gave my dog a GNC Multi-tastic Oral Care Dental Bone. At dinner time, she ate a small amount of her regular Wilderness dry food. In the early morning (approximately 1:15am, January 9th), she began vomiting. She continued vomiting bile and a greenish slime that had a horrible smell. She vomited an additional 5 or 6 times, until she had the dry heaves. I called GNC to make sure the product was not manufactured in China. The individual gave me a case #135923760 and referred me to (b) (6) in the Safety Dept. After explaining what was happening, he had concerns my dog was suffering from dehydration (which she was) and said she needed vet care. I took her to the vet and she was given subcutaneous fluids, Cerenia 10mg and Ranitidine HCl 25 mg. I brought the bag of dental bones to the emergency vet visit, and the vet said to discard them. The next day when I changed the blankets on my dog's bed, I found 3/4 of the dental treat which had an awful, putrid smell, which without sounding totally gross, smelled like a couple of the early morning vomits. I am 100% confident my dog did not eat anything that she shouldn't have because she is a pampered house dog, never given table scraps, and is always on a leash when taken for her walks.	9	Years	Mixed (Dog)	Dog	59	Pound

EON-156929	2/12/2014 10:36	Mellow Mut Chicken Breast, 100% Natural Quackers 100% Natural Breast of Duck, Vitality Chicken Breast, Pet 'n shape Chik 'n sweet potato, Breathies Chicken Breast with mint and parsley, Heathfuls Sweet Potato and Chicken Wraps	<p>(b) (6) presented on 1/24/14 for thrombocytopenia, anemia, polydipsia, and polyuria. She first developed polydipsia and polyuria about 10 days prior to her presentation. She was seen by her referring veterinarian on 1/18/14 for polydipsia and polyuria and bruising on her back. Labwork at that time showed thrombocytopenia (10,000 per uL), normal HCT (46%), azotemia (creat 1.9, BUN 18), prolonged clotting times (PT 45.6, PTT 29.4), and glucosuria (3+). She was sent home with prednisone (5mg - 1.5 tabs PO BID), Omeprazole (20mg - 1/4 tab PO SID), and Doxycycline (50mg - 1/2 tab PO BID). (b) (6) bruising had improved, but her increased drinking and urination had not. Recheck labwork on 1/24/14 showed a decreased HCT (37), thrombocytopenia (17,000 per uL), low total protein (4.9), high ALP (223), improved creatinine (1.2), and mild hypokalemia (3.2). Urinalysis was not repeated. A 4Dx snap test and tick borne PCR panel was sent to Antech. All results were negative (Lyme positive but consistent with vaccine).</p> <p>She has been fed sweet potato and chicken jerky treats made in China for slightly over one year. (b) (6) does not live with any other animals. (b) (6) had been infested with fleas for the past few months which her owners had been struggling to control and she had recently been given a new flea collar. (b) (6) last received Advantix and Heartgard plus on January 1st.</p>	6	Years	Maltese	Dog	10.8	Pound
EON-156903	2/12/2014 1:24	Taste of the Wild Rocky Mountain Cat Food	Cat suddenly became ill 3 weeks ago after starting a new bag of Taste of the Wild-Rocky Mountain Feline Food. She did not eat or drink water for a week after starting bag. She also was not urinating or pooping. Vet gave her anti-nausea meds and fluids a few times. She got x-rays and ultrasounds that were normal, as was her bloodwork. She then seemed to be getting better for about another week-she was eating and eliminating, but not as much as normal. For the past week has not been eating again and vomiting frequently. New imaging showed no problems. She has lost at least 4 pounds since this began.	9	Years	American Shorthair	Cat	8.25	Pound
EON-156885	2/11/2014 20:03	Nutro natural choice Chicken whole brown rice and oatmeal formula for seniors	Recently switched to the new dog food. Right after I started feeding to my dog she has been having soft almost diarrhea like stools everyday and has been throwing up bile every couple days. Finally made the correlation that it must be the new food as everything else has been the same. Today was the last day I have fed her the food. I will see if the problem improves.	8	Years	Bulldog	Dog	45	Pound

EON-156478	2/10/2014 13:06	Dogswell Happy Hips Lamb and Rice Glucosamine and Chondroitin	On the morning of (b) (6), this dog was given a Lamb based jerky treat made in China (the first treat of a new bag),at 8:30 A.M. The dog consumed it ready but at 10:00 A. M. the dog began to vomit large amounts of foul odorous fluid. The dog was scheduled for a grooming at 12 noon. During the grooming procedure, the groomer attempted to contact the owner at 3:00 P.M. to inform him that the dog was acting unusually lethargic. The owner returned to pick-up the dog from the groomer at 4:00 P.M. to find the dog continually acting lethargic and having signs of tachypnea. The owner took the dog home and kept him in the owner's bed until the respirations had reduced to normal. The dogs lethargic behavior persisted along with a lack of interest in food or water intake. At 6:00 P.M. the dog crawled into a secure area under the owner's bed to hide. At 7:00P.M. the owner identified the dog becoming weak and at 8:00 P.M. the dog was found dead and had passed feces and urine. The owner saved the dog's remains in a cool environment until (b) (6). At that time an extensive necropsy was performed and histopathological samples were collected. The necropsy findings revealed minimal pulmonary, cardiac, gastric, hepatic ,renal or urinary bladder lesions. Extensive distension of the gall bladder and mild pancreas inflammation at the level of the pylorus was identified. The stomach was explored and the contents revealed fragments of undigested jerky treats along with foamy liquid. These contents were collected and saved for possible future analysis. Histopathological analysis of the pylorus, lung, liver, left kidney, urinary bladder, and myocardium was submitted. The primary histological abnormality was vacuolar hepatopathy, which, in the pathologist's opinion, would be consistent with exposure to some form of hepatotoxin and recommended that this incident be reported to FDA.	9	Years	Terrier - West Highland White	Dog	27.9	Pound

EON-156222	2/5/2014 11:09	Blue Buffalo Senior	<p>I began feeding my dog Blue Buffalo senior food in July of 2013. In August 2014, she suffered what seemed at first to be a panic attack but later was determined to be a seizure. This was completely uncharacteristic for her as this has never happened before. It seemed to be an isolated incident until a few months later, I came home to find that she had had another episode. She is completely potty trained however, she had urinated on the rug and I found her coat to be wet near her hind quarters. Her face and neck were also wet from saliva. I deduced that she had collapsed into the seizure and had urinated uncontrollably during the event, like she had done previously. This incident happened in December of 2014. In January 2014, she suffered multiple seizures within 24 hours of one another. She is currently taking anti seizure medication, however it is currently unknown if it will control the seizures until she's been on the medication for several weeks.</p> <p>Coincidentally, our 3 year old Boston Terrier (b) (6)" was also given Blue Buffalo food about 6 weeks prior to (b) (6) 2 weeks before (b) (6) had a seizure, (b) (6) had his first seizure. Both dogs are currently eating Blue Buffalo food and (b) (6) continues to have a seizure roughly every 6 weeks.</p> <p>We are currently working on switching their food to another brand.</p>	12	Years	Mixed (Dog)	Dog	35	Pound
EON-156221	2/5/2014 10:51	Dogswell Happy Hips Chicken Breast	<p>(b) (6) went in for a dental cleaning and was therefore given a blood test prior to going under anesthesia. His kidney values were high and had to stay overnight and given IVs. His kidney value went back to normal the next day but needs to be checked again in a month.</p> <p>I had given him Dogswell Happy Hips chicken jerky treat that I opened a week ago. One evening last week when I came home, I found a mess of diarrhea and vomit with the dogs. This was just a few days after opening the new bag of jerky treats.</p>	9	Years	Terrier - Yorkshire	Dog	12	Pound
EON-156220	2/5/2014 10:33	Purina Friskies / Chicken & Tuna Dinner in Gravy / Prime Filets	Recently my animals have begun vomiting shortly after eating most flavors of Friskies wet canned cat food.	12	Years	American Shorthair	Cat	11	Pound

EON-156179	2/4/2014 11:57	Nutro ultra Puppy	I switched both of my dogs to nutro ultra about three weeks ago. Prior to this they were both on blue buffalo and we're in perfect health. When I switched them at first they ate the food fine but after a week they would no longer even go near it. My puppy who is 6 months old started to vomit and have bloody diarrhea. We took her to the vet he advised to never give them nutro again. After days of her at the vet she is still not doing well and they don't think they can save her. People need to know how horrible this food is and never have this happen to another animal. After all the horrible reviews of the same thing happening online I do not see how they are still on the shelves . Please do something.	6	Months	Akbash Dog	Dog	45	Pound
EON-156163	2/4/2014 5:21	by nature 95% Varieties 95% chicken grain free dog food	I buy it by the case...it's the Chicken one, I have gone through several cases...most cans have weird looking pitch black blobs in spots here and there throughout the food. It reminds me of motor oil and sometimes I think it's ground rats or bugs. One time with a blob of it, there was what appeared to be cartilage with it. Very concerned and would like to have it tested. I have photos.

EON-156145	2/3/2014 19:12	Iams Proactive Health small and toy	The night of (b) (6) My girlfriend (b) (6) and I went Walmart (b) (6) I had purchased a 5lb.bag of Iam's Proactive Health small and toy dog food. We came home and I fed (b) (6) my toy yorkie a bowl of the food. The next morning she wasn't acting herself. She just layed on the couch and slept.That evening we noticed that she was yelping outta no where, her stomach was very hard and swollen, she pretty much didn't want to move or be moved. We went to bed that night. She slept on the couch with my girlfriends son (b) (6) . I woke up that morning and realized she had diarrhea on her and all through the living room. This dog never had any accidents inside the house. That's how I knew she wasn't feeling well at all. I cleaned her up and put her in her cage. She wouldn't eat or drink anything at all since she consumed that bowl of dog food the previous night. I was thinking it was just stress of my girlfriend,her son, and their dog being at my house. She was just use to it being me and her in the house. I never would've thought it was something very serious that was wrong with her. My girlfriend and her son had left that day. (b) (6) just stayed in her cage curled up in a ball. I frequently checked on her. (b) (6) (b) (6) that afternoon I had to run to the store. before I left I went in checked on her and said id be back. (b) (6) finally lifted her head up and looked at me. So I was thinking good she's getting better! I was gone for maybe a hour. I come home and went in to check to see how she was doing. I found her in the cage. She was stretched out,eyes open,stiff, her gums and tongue were white. (b) (6) had called the Walmart where I purchased the food. She explained what had happened. She was told for us to go there and fill out a product liability form. We went there and filled it out. Iam's contacted me. I'm to send in samples of the dog food. here's the company's name and address Proctor and Gamble pobox 599 Cincinatti Ohio 45202	3	Years	Terrier - Yorkshire	Dog	3	Pound

EON-155966	1/31/2014 16:33	Mini DINGO Dental Chews	I recently bought a bag of DINGO Mini Dental Chews. I gave my dog several of these dental chews over a period of one week. The UPC for these chews is 6 15650 28006 3 and the Item# P is P-28006C / 11-20989-01. My wife noticed that on the back of the bag there are instructions for use. These instructions are not listed as directions but rather as "Caution". The Caution statement includes some questionable lines such as, "Wash hands thoroughly after handling treats." If this is a treat intended for my dog to eat, why must I wash my hands after touching them? I felt that if I must wash my hands after touching them, they can't possibly be safe for my per to eat. Is this a standard for this industry which I am unaware of???						
EON-155963	1/31/2014 15:39	Cadet Gourmet Duck Breast	After feeding my dog Cadet Gourmet Duck Breast that I purchased from Costco my dog got sick and started to vomit numerous times.	1	Years	Mixed (Dog)	Dog	23	Pound
EON-155962	1/31/2014 14:42	PetShoppe duck jerky premium duck dog treats, Petshoppe salmon jerky premium salmon dog treeats	Gave dog duck jerky treats and salmon jerky treats - 2 of each on a Wednesday(1-29-14) evening. Thursday afternoon she lost her appetite, Thursday night she became sluggish and lethargic (not moving much, seeming uncomfortable). Friday morning, lying in one place with no willingness to get up. She did go out around lunch time and did her business with no troubles, only to come back into the house and lie in the same spot, unwilling to get up or show interest in anything.	12	Years	Mixed (Dog)	Dog	60	Pound

EON-155936	1/30/2014 17:54	Kingdom Pets Chicken Jerky	<p>presenting complaint: 1/10/14 "for the last couple weeks, (b) (6) is struggling to get up in the morning"</p> <p>Normally, (b) (6) is an exceptionally active dog, especially for his age. This struggling to get up progressed to vomiting and urinating in the house. Unfortunately, we don't have a urine sample, but his bloodwork results were abnormal: ALT 995 and ALP 289 (both liver values were elevated--especially the ALT is extremely high).</p> <p>By today 1/30/14, (b) (6) is doing great at home: getting around much better, no more vomiting, and no more peeing in the house. He is back to his old self. The only real treatment (other than supportive care) was the discontinuation of the chicken jerky treats, which he had been receiving on a regular basis for months. (b) (6) will return for a recheck next week.</p>	14	Years	Siberian Husky	Dog	64.8	Pound
EON-155932	1/30/2014 17:15	Pet shoppe pork skin twists chicken livers Center	Dog was fine gave her 9 treats total over about 9 days and recently got sick. Dog has diarrhea, vomiting, sluggishness and loss of appetite.	8	Years	Unknown	Dog	64	Pound
EON-155929	1/30/2014 14:39	Paws Premium Purrfect Medley, Friskies Surfin' & Turfin" Favorites	I have had four cats die between (b) (6). Nutmeg was diagnosed with kidney failure on Dec. 13 and died on (b) (6) Subsequently, two of my three remaining cats were diagnosed with kidney disease the following week. The three who died in 2013 weren't diagnosed with kidney disease, but one did have urinary problems. I'm trying to find what could be causing all of this.	13	Years	Unknown	Cat	8.5	Pound
EON-155928	1/30/2014 14:21	100% Natural Skin Whole food-based dog treats	I bought a bag of whole food-based dog treats at a Pet Supermarket store. I opened and gave one of the treats to my pure breed Siberian Husky. He devoured it. After that, I emptied the box into a plastic container I use to keep the treats, and I discovered than the bag was full of small insects, who had eaten part of the treats and even the plastic bag. The expiration label reads "best by dec-30-2013" so even though it's expired, it hasn't been that long for a dry food, it should be ok. That was a couple of hours ago and I haven't went back to the store yet, but they have an aisle full of these bags and I'm sure they are all compromised. I don't know if my dog is going to be sick or not, but I think that a big chain like Pet Supermarket must take better care of the products they sale, or else pay some kind of fine.						
EON-155922	1/30/2014 12:36	Pedigree Adult complete nutrition	She had blood in her stool. Then it became bloody diarrhea. I took her to the vet who said it was pancreatitis and gave her antibiotics. She is doing much better now however I'm concerned that this was a result of the Pedigree dog food I was giving her and needs to be investigated further. She eats almost no human food.			Dachshund - Miniature	Dog

EON-155918	1/30/2014 11:30	Everpet rawhide retriever rolls beef flavor 100% rawhide	(b) (6) started with diarrhea on Jan 25th along with conic vomiting, unable to keep even water down, very depressed. Was given a raw hide before Saturday new package from Ever pet rawhide retriever rolls beef flavor. Was hospitalized, lab work done, along with barium series. (b) (6) ended up having to go to exploratory surgery where three separate sites of intestine were inflamed due to minor blockage.	8	Years	Poodle - Toy	Dog	10.6	Pound
EON-155825	1/29/2014 20:57	Simply Right Pet Care	I purchased canned food from Sam's Club and my dogs had been experiencing diarrhea. Well, today I open one of the cans and it had a thick coat of mildew (black, green, white and had a furry texture). I called the store and reported the problem and I was told to take it back to the store for a refund. My concern is that the entire batch is bad and there is a high probability that all the cans contains spores as my dogs have been having diarrhea around the time we started feeding them the can food.	2	Years	Boxer (German Boxer)	Dog	60	Pound
EON-155806	1/29/2014 14:09	Friskies by Purina Party Mix Beachside crunch 10oz cat treats	Bought two bags of treats two weeks ago from Target. Stored on open shelf in home, not cold/hot, nor damp. Opened on Sunday January 26 and gave treats during the evening for various times to use the litter box and at bedtime. By 4:30 a.m. (b) (6) woke us up and was vomiting. She vomited up the treats and a lot of fluid; then in five minutes one other girl after another vomited: (b) (6), (b) (6), then (b) (6) -all treats and fluid but far less than (b) (6). We took (b) (6) temp and it was 100.9 . She was not lethargic. The others were fine, also. The next morning, gave them water by mouth to make sure they weren't dehydrated. They all ate and bounced back. But later when given more treats, they later again vomited them up and rather soon. But all bounced back and did not seem ill nor did they need the vet nor did they vomit up fluid or continue to vomit. We will return the bags to Target for a refund. EON-155601	1/27/2014 21:15	Waggin Tails	<p>We bought a bag of Waggin Tails Chickem Jerky Treats over the Christmans holiday at the Wal-Mart store in (b) (6). Over the course of a week, I broke up the equivalent of about 4 whole treats into small pieces for (b) (6). (Our other dog, (b) (6), a 40 pound lab/jack russel terrier mix was given larger pieces and had no noticeable symptoms).</p> <p>Gradually through the week, (b) (6) began vomiting, initially strating as simply coughing up mucous, but over the days progressing to more bilious substance; loss of appetite, but what little she did eat, she had diahrrea; overall lethargy; she was always a good water drinker so we didnt notice anything unusual about drinking more. We thought she may have possibly have a virus after a week of this----highly unusual for our healthy (b) (6). On (b) (6) we took her to our vet, who has known her since age 2. They examined her and ran some preliminary labs, and saw that her liver values were off the charts and advised us to immediately take her to our local emergency veterinary hospital. Before we left, they had asked us if we had given her any jerky treats? At the emergency vet, she was admitted for sudden onset of elevated kidney values and placed in their ICU. After 4 days of tests and aggressive fluid therapy, bacterial infection was ruled out and acute renal failure was diagnosed as her liver values never significantly improved. She was discharged to home with medication to stimulate her appetite (Mirtazapine) and for nausea (Cerenia) and to administer subcutaneous fluids. We brought (b) (6) home, but she never ate or drank again....she was such a fiercely independent dog, there was no way she would tolerate us syringe feeding hershe had too much dignity, and she became so fragile so rapidly.We had a lenghty but frank discussion with our vet who reassured us that her liver fauilure was irreversible, that she would not improve, and that she had a matter of days to live. After much grieving(and guilt about her dying at our own hands through the purchase of these jerky treats), we made the decision to euthanize her to prevent any further suffering she may experience. We were and are heartbroken. We had no idea about dog treats made in China and even those that LOOK like they are made in the USA may only be packaged here. We have and are telling everyone we know to avoid buying dog treats and to read the packaging very carefully!</p>	12	Years	Terrier - Cairn	Dog	25	Pound
EON-155582	1/27/2014 16:42	Pedigree Chopped Chicken	Opened can of Pedigree chopped chicken dog food for my dogs and in the middle of the can was skin and hair. Disgusting and nauseating to think we trust these people to feed our animals.

EON-155538	1/27/2014 15:18	Buffalo Blue Wilderness - Natural Evolutionary Diet w/ life source bits- Senior, Blue Wilderness Trail Treats- Grain Free- Duck Biscuits, Blue Bites- natural soft moist dog treats- savory salmon treats	I have been feeding my dog Blue Wilderness for about a year... I have mixed up the adult and senior formula and over the last 3 months have switched totally to the senior formula. I also switched her treats up this go round.... she got two different kinds.... one was the blue bites salmon treats (the soft kind) and the other were the blue wilderness duck biscuits. After one day of the food and having one treat from each bag (two separate days)... she has had greenish, non smelly, mucous covered stool. During the night she went out 4 different times and now during the day we've had 3 separate incidents of the same diarrhea, roughly 2 hours apart. As far as her behavior she is acting relatively normal, she was happy this morning we went on a 45 min walk, she has no sign of fever or lethargy. I called her vet and spoke to them they said that if she isn't better by tomorrow, I should bring her in.	10	Years	Mixed (Dog)	Dog	43	Pound
EON-155526	1/27/2014 15:00	9Lives Chicken and Tuna Dinner	Two cats, ages 8 and 16, vomited shortly after eating 9Lives Chicken and Tuna Dinner canned food. The cat food was sold as a package of four cans.	8	Years	Unknown	Cat	15	Pound
EON-155491	1/27/2014 12:24	Nutrabar	I have been buying Nutrabars for my dog at Walmart for the past few months. Once, I found the bars to be very hard (where usually they are soft). More recently, I purchased several of the original bars at Walmart that turned out to be hard and moldy (white and green, where they're usually brown). I actually gave one to my dog--the light was poor, so I didn't see it was moldy. Thankfully, she didn't eat it. When I realized my error, I opened the other bars I had and two of them were moldy and the others were hard. I emailed the manufacturer last week and have not heard back and I returned the bars to the (b) (6) Walmart a couple of days ago and told them what I found and recommended they stop selling them.						
EON-155468	1/26/2014 22:00	Kingdom Pets "Wholesome" Chicken Jerky	The last 2 months she has had trouble being constipated and/or diarrhea with no appetite, she's normally very playful but has been sleeping a lot, then the last month or so we noticed she would bump in to things and seemed disoriented. We took her to the vet and ultimately to the (b) (6) where she was diagnosed with SARD.	9	Years	Terrier - Jack Russell	Dog	21	Ounce

EON-155329	1/24/2014 14:09	Pedigree Large Breed Nutrition	Approximately a few weeks before (b) (6) died, we had switched her food from Kibbles 'n Bits dry dog food to Pedigree Large Breed Nutrition dry dog food. Although (b) (6) had always been a good eater when we had fed her Kibbles 'n Bits, we noticed that she did not like the Pedigree Large Breed Nutrition kibble, but regrettably, started putting treats and/or wet food in it to get her to eat it. As a sidenote, whenever (b) (6) had left any of the Kibbles 'n Bits food in her bowl, the ants would be all over it and I had noticed and thought it was strange that when there was Pedigree Large Breed Nutrition food remaining in the bowl, not a single ant was on it. In retrospect, this was probably indicative of an issue with the food. Not immediately after starting on the Pedigree, but approximately a week or so after, she began vomiting sometimes after eating, although not every time--once even doing so three times in the house right near her food bowl. Over the course of the next couple weeks other symptoms manifested, such as (b) (6) had peed on her bedding a couple times and later would not jump to catch a ball, but rather would let the ball hit her in the face. Because the symptoms had occurred gradually, we did not link them to the food and at the time we decided it was time to take her to see the veterinarian, I frankly thought that she had a hernia. On Friday, (b) (6), I took her to the veterinarian, (b) (6), and requested blood tests and x-rays as the veterinarian did not seem to think she had a hernia. Nor did the veterinarian seem to grasp the gravity of the situation. He prescribed antibiotics and I believe an antacid because the x-rays revealed gas in (b) (6) stomach and advised that the blood test results would not be available for 48 hours and told me to make a follow-up appointment for Monday, (b) (6). On Sunday morning, (b) (6) (b) (6) took her last breath. I obtained (b) (6) blood test results on Monday and they revealed acute kidney failure. When (b) (6) died I began wracking my brain as to what may have occurred and recalled that we had recently switched	2	Years	Shepherd Dog - German	Dog	70	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			her food to Pedigree so I googled it and stumbled onto the consumer affairs reports website on which I saw so many other complaints regarding this dog food with similar scenarios. I think (b) (6) symptoms manifested gradually as a result of her having been such a strong dog. On Monday, (b) (6) I contacted Pedigree to report this and Pedigree eventually sent me a sample bag and return envelope which I filled with the food (we still have plenty left) and returned to Pedigree immediately. Dealing with Pedigree has been completely exasperating and finally, this past Tuesday, January 21, Pedigree's claim representative assigned to my case, (b) (6), effectively advised that Pedigree has no intention of testing the food for toxicity essentially stating that Pedigree does not think I will be able to prove a case against Pedigree because no necropsy was performed on the dog and because the veterinarian would not definitively opine that the acute kidney failure occurred as a result of the food. I have since been trying to find laboratories to test the food, but have been unsuccessful in locating one that will test food for an individual (as opposed to commercial testing). Our new veterinarian for a dog we recently adopted suggested contacting U.C. Davis which I just did. Dr. Renate Reimschuessel requested that I make this report. Vet-LIRN has already been contacted.						
EON-155300	1/24/2014 13:18	Chicken Breast Jerky Treats exact name unknown - purchased at Costco Cincinnati Ohio	Fed both dogs from a new bag of dried chicken breast jerky treats in fall 2008. only a couple treats were given to each. Treats were a "product of China" purchased at Costco retailer. Both dogs soon developed explosive diarrhea. Day two-four, diarrhea contained blood. Both were very lethargic for a week. Male, 15 years old developed complete kidney failure and was put down about 10days after eating the treats. Female, 14 years old recovered but never regained an appetite wasted away to be put down 8 months after eating the treats. As a pharmaceutical research scientist, I retained the product for melamine testing, but at the time read that whole dried meat treats were safe. Product since discarded. Interested in making sure my two old friends are counted in the total of this unfortunate event.	15	Years	Mixed (Dog)	Dog	50	Pound

EON-155247	1/24/2014 10:30	Purina Moist n Meaty	A case of 54 count of Purina Moist & Meaty was purchased from Sam's Club. We used many packs before detecting an awful smell. After removing the packs there was one sealed pack which resembles powder inside and has a rotting smell. Contacted Purina and was told it was grain mites. Most likely caused by transportation company or Sam's Clubs warehouse. They said this would not cause any harm to the other packs and everything else we had stored in the area. Just throw that pack away. Purina never asked for a sample. So we don't know if it is definetly mites. We still have this bad pack and would like to have it analyzed. Very concerned because many packs from that case were already used.						
EON-155192	1/23/2014 21:06	Party Animal dog food. Jam min' Salmon Recipe	We found light blue rubber particles in what is supposed to be all natural and healthy dog food cans...more than one.			Shiba Inu	Dog		
EON-155173	1/23/2014 16:09	EVO 95% Venison - dog food, EVO 95% Beef - dog food	<p>EVO 95% venison and 95% beef canned dog food - dog began REFUSING to eat it... cans from new cases/lots. if i was able to get her to eat any, it would be from the 1st serving of the can... she'd consistently refuse subsequent servings (stored in glass containers in refrig). today, she refused and wouldn't eat it no matter what. i tried repeatedly. nothing. after reporting to manufacturer, per their request, tried a can from a different lot (we had purchased 2 cases at the same time of the venison)... she actually took a bite, tentatively - not her usual digging in - and PROMPTLY SPIT IT OUT!! she's NEVER done that before!!!</p> <p>so, we have 3 cases of EVO dog food... that she refuses to eat (and she's normally a good eater! and is not sick). i went to evo's facebook page to find out if they've changed anything (although the one case, the venison if off color and smells really different...) and found out that someone else was having issues with their cat refusing to eat the 95% venison (evo told me their 95% recipes are the same for cat & dog).</p>

EON-155141	1/23/2014 0:09	Paws Premium Naturals Chicken Chews Fillets	The treat was given to three dogs (a lab mix, a French bull dog, and a pit bull) - all three began throwing up within minutes of ingesting the turkey. I believe (b) (6) the Pit Bull) had larger quantities of the treat than the others. They all began to drink a lot as well. (b) (6) ate twice the next day and threw up once. We began to notice over the next 2-3 days that he wouldn't be hungry for awhile but then would become famished and devour too much food. He threw up when he over ate. He would also drink a ton of water and throw it up. When he wouldn't eat he was throwing up bright yellow bile. By Sunday night (b) (6) he stopped eating unless we hand fed him. His last hand fed meal was on Tuesday J (b) (6) (b) (6) around 5:30 pm. He became uninterested in food after that, we would try to feed him but he didn't want anything to do with it. He would drink water and throw it up. He wouldn't play with his pack. We took him to the vet on Thursday (b) (6), they did blood work and the only thing they said they could find was dehydration! He passed away before we had the chance to get him hydrated. I believe the turkey jerky is the cause. I have the bag and the print out from the vet's lab work. The back of the turkey jerky bag says it's made in China. My mother-in-law gave the treat to the dogs and she thinks she got it from Wal-Mart or Winco.	9	Years	American Pit Bull Terrier	Dog	110	Pound

EON-154878	1/21/2014 0:03	Purina One Weight & Purina Beneful Healthy Weight	<p>My dog started having seizures in March of 2011. They worsened & multiplied by June 2011. He began having grand mall seizures, lasting up to, & in excess of, 10 minutes per seizure, coming in clusters (consecutive seizures). We had to administer up to 3cc of Valium, per occurrence, to reduce the severity, life threatening complications of the seizures.</p> <p>Originally & unknowingly, the seizures began when we started feeding him Purina Weight Control dog food nearly a year earlier. They ceased when we changed his food due to a diagnosed "skin allergy" on 02/27/2012, of which we also expect the food to be a cause of, as he had no adverse reactions since!</p> <p>His seizures began in March 2011 & continued until 2/11/2012. He had at least 17 seizures that we personally witnessed the majority of them documented by our Vet. My husband & I both worked full time, at least 50 hours per week each, however, we definitely suspect that there were many more due to his temperament, loss of hair & appetite & painfulness on numerous occasions that were not apparent when we left home, but rather when we arrived.</p> <p>The majority of the seizures have been documented by our Vet, up until they ask us to quit reporting them. They diagnosed him with epilepsy & wanted to put him on Phenobarbital to subside the condition. We elected not to put him on Phenobarbital for at least 1 year due to his young age & sudden on-set of the seizures, thankfully so, as all seizure activity has subsided since the food change to a limited ingredient diet, by a respectful manufacturer, due to a "suspected food allergy", but rather an actual food poisoning. Our Pomeranian also had seizures due to the food for which I will file an additional report!</p>	2.4	Years	Retriever - Labrador	Dog	78	Pound

EON-154762	1/18/2014 14:33	Wagon train chicken strips	In 2011 I took my dog to vet as he wasn't acting quit right. They ran blood work on him and his liver function AHT was very high. My vet put him on Denamarin and it kept creeping up I though the chicken strips were the only thing I didn't change in his diet. I stopped giving him the Wagon Train treats, and the next time they did his blood work it seems to go down. Had him tested every month for the first three months of no longer giving him the treats. His liver levels dropped some but never got back to normal. It has been 3 years and to this day his liver function has never returned to normal. I no longer give him any store bought treats I had him tested again yesterday and (b) (6) said he still has the results in the high range. I am very thankful that I stopped giving him the treats as I feel had I continued I would have lost him by now. He still isnt the same dog but he is at least still alive. I couldn't get the breed to go to his breed it kept entering its own choice My dog is a Labordor/Chow mix.	10	Years	Karelian Bear Dog	Dog	63	Pound
EON-154746	1/18/2014 1:00	Innova Adult Dog Food Small Bites	About a couple of weeks ago, I started to switch my dog from Eucharuba to Innova small bites. I mixed the two brands to switch him over safely. Once I completely changed to solely Innova, my dog started to act strangely. He started pooping at random times of the day. His stool went from normal, to soft, to soft with some diarrhea, and now it's completely diarrhea. Yesterday, he pooped in the house than threw up. I took his food away for 18 hours and his stool went back to soft. However, this morning and after work I fed him and watched how after a hour or two him run to the door and diarrhea in front of it. His diarrhea also has a lot of mucus and smells metallic. I do not see any blood, however. I have never had this issue with him before and he isn't showing any signs of having doggy flu or anything.	3	Years	Unknown	Dog	10	Pound

EON-154697	1/17/2014 15:06	Unknown. Jerky treat according to owner but has not given recently	<p>Mild azotemia, isosthenuria and hypophosphatemia was first documented on bloodwork and urinalysis on 10/21/13 at routine annual visit. BUN = 48, Creatinine = 1.7, USG = 1.007. A diagnosis of chronic kidney disease was made at that time. He was not displaying any clinical signs. (b) (6) was prescribed Science Diet k/d by primary care veterinarian which caused him to have an episode of vomiting and diarrhea (large volume, watery). Pancreatitis was suspected by the rDVM because of the high fat content of k/d. He was then prescribed Science Diet g/d which he has been eating for about one month now with no signs GI upset. Owner expressed concerns of wanting (b) (6) on a renal diet to slow the progression of his disease. rDVM repeated tests on 11/19/13: BUN = 17 (normal), Creatinine = 2.0, Phosphorus = 2.0 (low), USG = 1.010. She was referred to the UF SAM Service for an evaluation and nutritional consultation on 11/25/13. Her blood pressure was normal, USG was 1.010, serum cholesterol and triglycerides were normal. rDVM repeated bloodwork on 11/27/13: BUN 15 (normal), creat 2.0, Phosphorus 2.0 (low), baseline cortisol was 2.5 (normal). Since this time, (b) (6) has been doing well at home on g/d food. He hasn't had any GI upset and is drinking less water than he used to. Ionized calcium, vitamin D, PTH and PTHRP were all normal as was an ultrasound of the neck. Blood gas and urine cultures all normal. The only explanation of the hypophosphatemia is failure to reabsorb phosphate. This suggests tubular damage so I am suspicious of Fanconi syndrome. The breed is known for dysplasia but this dog is old to develop that disease.</p> <p>(b) (6) is fed once a day in the morning. For most of (b) (6) life, her diet has consisted of approximately one cup of Blue Buffalo Wilderness Salmon dry dog food with 4 heaping tablespoons of a canned dog food mixed in. She also received one CET chew treat. Approximately 2-3 months ago, (b) (6) was switched to a diet consisting of 1/2-1 cup of the Blue Buffalo mixed with 4-5 raw meat patties purchased from PetCo (brand unknown) which consisted of either rabbit, beef, or chicken. She was also giving jerky treats of unknown manufacture. Since being diagnosed with chronic kidney disease by her primary care veterinarian, she has been eating strictly 1 and a half can of Science Diet g/d per day and receives approximately 4-5 Kellogg's Frosted Mini Wheats and green beans as treats.</p>	13.7	Years	Other Canine/dog	Dog	10	Kilogram

EON-154590	1/16/2014 17:39	4 Health chicken and rice adult	We started feeding Kirkland signature chicken and rice food to both our dogs. At fist they ate it. About half way through the second bag they no longer would eat it. So I looked at ingredients of some other foods and found 4 Health. At fist they ate it then (b) (6) stopped eating it and (b) (6) would only pick at it. Before I could look into what was going on (b) (6) became very sick. On (b) (6) she began vomiting and not wanting to move. The next morning she couldn't even keep water down. We took her to the vet and through blood teats was diagnosed with pancreatitis. She was given medicine and put on a human food bland diet. She started to get better. When it was time we put her back on her food. On (b) (6) she became very ill again and was put in the hospital. Through blood tests not only was her pancreas inflamed but now her Liver and small intestine. The doctor did a ultrasound and found that part of the liver did not look right and also some lymph nodes were inflamed. They wanted to do surgery to biopsy the liver and lymph nodes. we called our regular vet and sat up this procedure with them. We took (b) (6) home on (b) (6) On (b) (6) 1 (b) (6) when I got up (b) (6) was vomiting and could not move and was running a fever. I rushed her to the vet and they did an x-ray and found she had pneumonia most likely caused from vomiting. We where then told that it would take a couple of weeks to treat the pneumonia and there was no grantee she would even make it. She was in a lot of pain and was suffering. We then had to make the awe full choice to have her put to sleep. On (b) (6) (b) (6) stared to vomit. We then made the connection with the food. we took her off and gave her a bland diet the switched her to Blue buffalo freedom. She is doing well and eating all her food. I have the 4 Health food if you will please take a sample and run tests on it.	1	Years	Bulldog	Dog	45	Pound

EON-154583	1/16/2014 16:36	Beneful	History: O reports that pet started having seizures 30 min. ago. Each seizure lasting between 3-5min, pet was alone during the day so O is unsure if had seizures then. Pet has not been acting normal and not eating. Pets regular diet is Beneful and gets bacon treats. No V/D/C/S; D-Normal Current Medications: None (b) (6) - (b) (6) was presented today with seizures. O reports he hasn't being himself for the last few days. No history of seizures in the past. O obtained the dog throughout a friend, not sure of past health history. O feeds Puppy Beneful and bacon treats. O reports last bag of food was purchased ~2 weeks ago from Walmart. I have placed FDA reporting form on your desk with as much information I could get from O, she was very stress since she decided to PTS (b) (6). We obtained ~5mls of urine sample right after euthanasing (used 3mls of Fatal Plus) and I placed on the freezer at the lab. We were unable to get sample prior euthanasia. I gave her your business card, O is concern because she just got a new puppy and is feeding Beneful too. I let her know you will be contacting her if more information is needed and to assist you with a good feeding plan for new dog. (b) (6)	10	Years	Chihuahua	Dog	15.5	Pound
EON-154553	1/16/2014 12:42	Nutro Max Dog Natural Chicken Meal and Rice Recipe Adult Dog Food	Intense diarrhea for 1 week, only stopped when dog was switched to boiled rice and chicken for a week. EON-154493	1/15/2014 23:09	Purina Friskies Prime Filets Variety Pack: With Beef in Gravy With Ocean Whitefish and Tuna In Sauce With Chicken in Gravy Turkey Dinner in Gravy	Our cats have eaten Friskies canned cat food (Filets and/or Shreds) for 2 years, but recently have started vomiting after consuming it or refusing to eat it at all (unusual for our cats!). Extends across all flavors in two different 48 packs (purchased from Costco or BJs), although some flavors are worse than others. We also bought a few single cans from a Walmart in case the bulk batches in our 48-packs were bad, but it was a similar story with the other cans. It seems we are not alone - please scroll through the postings on the following website: http://petfoodtalk.com/catfoodreviews/friskies/. Many of those stories mirror what we observed or much much worse. We contacted Purina, the parent company, and encouraged them to consider a recall. We will be switching to a different source of canned food, but wanted to report the problems we had, in hopes it will save other pet owners from similar experiences. Selected manufacturing codes/UPC codes for products: 317717891422L073205/050000576760 (48-pack purchased from BJs), 31971161L24460926/050000225224 (single can purchased from Walmart).	2	Years	Domestic Shorthair	Cat	11	Pound

EON-154492	1/15/2014 22:27	Purina Beneful Healthy Radiance Dog Food	We opened a new bag of the same dog food we have been feeding since 2007. (Beneful, different varieties) She ate it for one day then began consuming large quantities of water. She began refusing her dog food unless we doctored it with people food. 2 days later she began refusing to eat all her food but continued to drink large quantities of water. On day 5 she threw up and became very lethargic, not even wanting to go on a walk which is her favorite thing. We fed her peanut butter and bread and other people food dogs are allowed to have. She recovered her spirit but still drinks lots of water, more than normal. We will now put her on a "hospital diet" of rice and cooked hamburger.	10	Years	Retriever - Golden	Dog	65	Pound
EON-154491	1/15/2014 22:12	chicken jerky premium chicken dog treats	After feeding each of two dogs one piece of chicken jerky from a newly purchased package of Petshoppe Brand jerky obtained from a local Walgreen drugstore, (b) (6) began throwing up frequently and regurgetated green bile on six occasions before lying down and appearing very lethargic. She attempted to eat grass on several occasions, and could not get comfortable lying down. She was given antacid pills and a short drink of chicken broth but was sleepless most of the first night. Treatment started at about 10:50 a.m.	3	Years	Spaniel - Cocker English	Dog	30	Pound
EON-154462	1/15/2014 17:18	Merrick Ranger Rib Bone	Gave our dogs the Merrick Beef rib bones as a treat to chew. They have had these before and they splinter into sharp shards, so we only give them while they are supervised. Normally they have handled them OK, but we remained on look out. A couple days ago one of our dogs began to drool and became lethargic. We took to vet thinking possibly something in stomach. They took xrays and found no bone fragments. Another day and dog was not well or even worse, with drooling, gagging and no energy. Returned to vet and more xrays, but nothing. The next day, still no improvement and returned to vet again and they kept her, sedated and looked in her throat. They found her tonsil had been lacerated, became infected but no bone pieces remained. The only hard bone she had was the Merricks rib bone. This has resulted in more than \$700 in vet bills, major trauma to our dog. This could have resulted in death or internal damage surgery. These should be pulled from production and sale. They are extremely dangerous. We love to provide our dogs with things they can chew safely, but the way these fracture are like knives and razors.

THESE DENTS ARE V-SHAPED ON THE SIDES AND APPROXIMATELY 3/4 to 1 INCH DEEP INTO THE SIDES OF THE CANS. This is not isolated to one particular flavor or style; however, I have noted it more frequently occurring with the "Indoor" varieties and "Tasty Treasures" varieties. These dents are NOT caused by "dropping": they are (again) severe V-shaped dents extending 3/4-1" into the sides of the cans like a sledgehammer was used. The cat food smells "off" as well. NOTHING IS DONE. The Meijer stores in question are: (b) (6)						
EON-154436	1/14/2014 23:54	Iams Proactive Health Senior Plus Large Breed	I purchased a 26.2 lb. bag of Iams ProActive Health Senior Plus Large Breed Dog Food from Wal Mart. I ordered the item online from Wal Marts Site to Store feature, and picked it up early January 2014 from the (b) (6). Upon opening it on January 11th (I dump the bag into a large tin can) I discovered kibbles of dog food were clumped together, as they were wet and moldy. Maybe a cups worth of wet/moldy dog food was found in the bag. I poured the dog food back in the bag to return to Wal Mart, but first wanted to report it here. Side note - I had originally ordered 2 bags of dog food from Wal Mart, but for one reason or another they sent one back and refunded me my money. I do not know if this was a Wal Mart issue, or if a known issue has already been reported on this and that is why it was sent back?

EON-154406	1/14/2014 10:21	Unknown name of chicken jerky treats from client	<p>This pet presented to my clinic for an acute case of vomiting, anorexia, lethargy, and mild polyurea and polydipsia. Physical exam showed tacky gums, mild cachexia over shoulder blades, and depression. Diagnostics showed hypoglycemia, hypophosphatemia, and hypokalemia with a marked glucosuria and proteinuria. Urine cytology and abdominal radiographs were unremarkable. Treatments consisted of subcutaneous fluids, potassium gluconate gel, and dietary supplements.</p> <p>One week later, owner reported that patient became much more polyuric and polydipsic, still lethargic, but slightly improved overall. All diagnostics at this visit were the same as the week before, this time with a negative urine culture. The owner informed me at this time that he did give his dog (and the other one at home who is currently non-clinical) a full bag of chicken jerky treats that he claims was on the recall list 6 weeks prior to the initial visit. He says that it was a 40oz bag of chicken breast strips that he bought at Sam's Club but is unsure of the specific name.</p> <p>Last week, I re-examined the pet, and she appears to be doing great. She had gained 3 pounds, and all bloodwork and urinalyses were within normal limits. I am having the pet maintain a daily multivitamin.</p> <p>I am reporting this case since there is a possibility of a chicken jerky treat-related illness, that appears to be Fanconi-like. At this point, I am giving the pet a good prognosis and will be rechecking her again in about 2-3 months. I have 20ml of her urine frozen.</p>	5	Years	Bichon Frise	Dog	15	Pound
EON-154385	1/13/2014 20:06	100% Natural Chicken Nibbles	Increased water intake and increased urination for 2 weeks. Sudden weight loss over 2 weeks. Poor appetite for 2-3 weeks. Vomiting x 1 day.	7	Years	Maltese	Dog	8.5	Pound

EON-154348	1/13/2014 9:27	Evanger's Super Premium Roasted Chicken Drummet Dinner, Against the Grain Grain Free Pulled Beef with Gravy	My dog got very ill twice after giving my dog evangers canned products. The chicken drummet and against the grain beef (made by evangers). Within a half a day of giving my dog a can she got very sick: throwing up and diarrhea. Both times I had to take her to the emergency vet. They took a stool sample and found high levels of clostridium both times. The vet gave me antibiotics and probiotics to give her and she improved. The most recent time was two weeks ago and she is doing much better, but still weakened. I give her a can of food and some dry food every day. I quit giving her cans made by evangers after the first bout, but decided to try again because she likes them. After each bout she went back on the same bag of dry food with no problems. I did email evangers and got no response. The most recent time I got very sick with similar symptoms afterwards.	14	Years	Collie - Border	Dog	45	Pound
EON-154347	1/13/2014 9:24	Authority Chicken Jerky	I bought a brand new bag of Authority brand Chicken jerky (the imprinted # on the bag, which may be the lot #, is BB20150724NT 1130723). After eating a few of the jerky treats over the course of 2-3 days, (b) (6) began vomiting. He vomited several times over a 24-hour period, but continued to have an appetite so initially I wasn't too worried. Then he started having extremely runny (watery) diarrhea ----- very frequently (approx every hour). He also became very sluggish and sick. The vet had to treat him with antibiotics (metronidazole) and FortiFlora probiotic powder. My other two dogs (who received the same treats) exhibited the exact same symptoms. Cost me several hundred dollars in veterinary bills to help get them well. My veterinarian told me that there are still lots of problems associated with chicken jerky for dogs and advised me to stop feeding them to my dogs. Since having my dogs treated with antibiotics & probiotics ---- and since I discontinued the chicken jerky treats --- all three of my dogs seem to have recovered.	10	Years	Dachshund - Miniature	Dog	15	Pound

EON-154106	1/9/2014 22:18	Beggin strips	(b) (6) loved Nestles Beggin strips. I started buying them a few monthes earlier. He got really sick on Friday and died Sunday morning. On July 8 I came home from work and my other dog was sick. Took her to vet the next day and she was sent to hospital. She was there 3 days. They said she had hemorrhagic gastroenteritis. When she came home I fed her chicken for 2 weeks. When I put her back on dog food {Solid Gold} I gave her a beggin strip. She threw up. This was the first time she had thrown up since coming home. I thought it was just too soon. So I waited a couple of weeks and gave her another one. She threw up again. I didn't know anything about the recall or treats making dogs sick. I had put them on Solid Gold in 2007 after the dog food recall. I quit giving her and my other dog (b) (6) the treats. She didn't throw up again. A few weeks later I came home from work and my husband said (b) (6) had thrown up. I asked him if he gave them anything and he said a beggin strip. This was probably in September. When I took her to vet for her checkup I told them and they said they had had a few dogs in from getting sick. (b) (6) is 12. Her and Toby are brother and sister. (b) (6) is 6. She had been getting diarrhea but has not had it since I stopped giving them treats. In September I saw on facebook about the treats making dogs sick.	12	Years	Mixed (Dog)	Dog	70	Pound
EON-154105	1/9/2014 22:12	Wag-N-Tails	On 1-7-14, the owner presented the dog because she was vomiting, shaking, and not eating for 2 days. EON-153984	1/8/2014 11:36	Wellness Grain Free Original Formula	We normally give our dog Wellness "Original Formula" in the morning. He refused to eat it several times. When he did eat it a few times, he seemed to have a hard time defecating. We quit giving him that bag of food for a few weeks and the problem went away and he was back to normal. Yesterday my husband mixed some of the food from the "bad" bag with a different formula of Wellness we give him for supper. That evening, and all through the night, he had loose stools every hour and now it is bloody diarrhea this morning. I'm not sure if it connected with the food, but I thought I would let someone know.			Terrier - Jack Russell	Dog		
EON-153968	1/8/2014 10:27	BLUE BASICS SENSITIVE STOMACH FORMULA-TURKEY AND POTOATO RECIPE	I was into about 2 weeks of feeding a new cat food (Blue Buffalo) since Eukanuba was getting harder to find. Two of my two cats didn't like it and continued to eat the Eukanuba only. (b) (6) loved the Blue Buffalo and would eat only that. Approximately 2 - 3 weeks of eating this food he gradually became very lethargic and coat was dull. A couple of times I noticed him staggering and his eyes would be glazed over for a few seconds. On april 23, 2013 he had a seizure where he actually passed out and I thought he was dead. He was taken to the vet that day, given blood tests with the diagnosis being seizure of unknown origin and no treatment was given other than to closely monitor him. By then he was also throwing up food immediately after eating it but I didn't suspect the food since it was reputed to be a high end perfectly safe cat food. But because food was the only thing different in his life at that time I stopped feeding it immediately and went back to the old food. From that point on there were no more seizures and after a long slow recovery of several months he is a healthy cat again. By now I am convinced he would be dead had I continued on with that food.	14	Years	Himalayan	Cat	10	Pound
EON-153939	1/8/2014 5:39	Hartz bones. natural. small.	Purchased product from (b) (6) commissary. Top layer of rawhide was fine. He chewed through it and underneath was a layer of mold. I do not know how much he consumed. This was Sunday night. On Monday morning he vomited. I took him to the vet Tuesday morning. He had a CBC conducted. His ALT is mildly elevated. Jan 8th, today, he is now suffering from diarrhea. I will contact the vet again this morning. He is scheduled for repeat blood work in 7 days. At this point it seems he has gastroenteritis. I'm praying he is not inflicted with mycotoxins.	3.5	Years	Bolognese	Dog	10.1	Pound
EON-153930	1/7/2014 22:51	Dog food	The warehouse at (b) (6) is producing dog food and they are acting very strange. I would like to notify you and suggest you have an inspection of the facility. There are smells and unsanitary conditions. Something is really wrong but they will not open the doors or come out. The police said to contact you the FDA.

EON-153849	1/7/2014 15:51	AKC Sweet Potato & Chicken Jerky Blend Dog Treats	(b) (6) became lethargic and started vomiting Saturday night. Sunday, she continued to vomit throughout the day, both bile and food. She was also straining to defecate. Monday, again, continued to vomit bile with some blood and struggled to defecate. Finally, was able to go to the bathroom and looked to have blood in her stool. Tuesday, continue to look uncomfortable and tried to vomit several times, but could not, so I took her to the vet. The vet checked her over, did blood work and determined the illness is most likely due to the AKC Sweet Potato & Chicken Jerky Blend Dog Treats that we received as a Christmas gift and gave her over the weekend. She had no other changes to her diet and was just in the vet's office December 27th, 2013 for her annual check-up with no issues. Our two other dogs have not had any symptoms, however.	8	Years	Poodle - Miniature	Dog	13.5	Pound
EON-153828	1/7/2014 14:00	Owner reports "Chicken Jerky Strips from Costco"	Presented on 12/30/13 for diarrhea starting on the 23rd. Decreased appetite since 27th. Decreased energy and thirst.	14	Years	Dachshund - Standard Smooth-haired	Dog	13.8	Pound

EON-153756	1/6/2014 18:42	Kingdom Pets Wholesome Duck and Sweet potato, Jerkey Treats	<p>We bought all of our Dog treats at Costco. This last year we would buy chicken jerkey (zip lock container, not sure of the brand) and Jerkey strips(solid plastic container, made by Del Monte). Then Costco changed (not sure of Dates but in atleast 2012 Or early 2013) the Chicken jerkey(again not sure of brand) to Kingdom Pets. They too had chicken jerkey a well as Duck jerkey. We used these products for months before the incident happened. Last couple of times visiting Costco they had Kingdom Pets Duck and Sweet potato bites. We bought some. We would change out treats with Kingdom pets and or the Del Monte strips. We started noticing her bowel movements changing from solid to a bit runny in mid July 2013. We Stopped with the Del Monte strips first. Noticing they were a little better, still giving her the Sweet potato treats. Then the big Diarreha started. We stopped all treats and took (b) (6) to (b) (6) in July29,2013. They said because she was getting older to change her food. We had her on Chicken and rice. Her bowl movements were better but still not firm. Started adding dog food to the chicken and rice, till we were on just palin dog food. The diarreha started back up again. Called the vet and they told us to Change dog food again. Back on Chiken and rice and started again with the tapering off. At no time did they do a blood work up or check her. It wasn't until I suggested to them to see if I could bring in a stool sample and check that. They sent it off to (b) (6) and found out that they had been consulting with (b) (6)</p> <p>The sample came back negative for poisen or salmonella. And suggested I change Dog Food again. Bought a bag at \$53.00 (as of now had spent \$167.00 on Different dog foods). Then proceeded at the time of purchase to say We aren't going to be able to help you with (b) (6) you need to go to (b) (6) . At which point btween the dog food and the Vet bills we were over \$1,000.00. By this time (b) (6) bowl movement had gone to Full on Watery Diarreha of which</p>	8	Years	Ridgeback - Rhodesian	Dog	76	Pound

EON-153514	1/3/2014 13:12	PURINA BEGGIN' STRIPS BACON & CHEESE FLAVORED	I gave my dog 2 bacon strips from a 14oz package of Purina Beggin' Strips bacon and cheese flavored treats that I had purchased on 12/15/2013 from Menards. Within 24 hours of receiving these he was vomiting. He has vomited 4 times over a period of 5 days. I took him to his vet on 1/2/14 and they can't find any cause for the vomiting. The vet did blood work, a stool sample check, anal/colon check and various other routine checks and can't find anything wrong with him. For now I was told to take him off his standard dog food that I've fed for several years and put him on a rice/lean turkey homemade mixture for several days beginning today 1/3/14. I have no idea if these Beggin' Strips treats are the cause of the vomiting but immediately quit giving them due to the vomiting issue. My dog has had these treats several times before with no adverse effects and it is very rare for him to vomit. I can't remember him ever doing it in his eight years. I can't say these are the cause but I am aware of the ongoing FDA jerkey treats investigation and wanted to inform you of this illness. I will retain the treats for any follow up and also have the UPC and manufacturing code on the package if needed. Thank you.	8	Years	Retriever - Labrador	Dog	88	Pound

EON-153388	1/2/2014 16:09	Royal Canin veterinary Diet Gastro Intestinal high energy canine	Our bearded collie, (b) (6), has been eating Royal Canin gastro intestinal canned dog food for several years. In the late afternoon of (b) (6) he was fed 1/2 can and threw it up almost immediately. On the Friday, (b) (6) in the morning he consumed some dry dog food and was fine during the day. In the evening he consumed 1/2 can of RC gastro intestinal HE dog food and walked into our bedroom and died at the foot of our bed. His death was a surprise since he had been fine all day before his meal. We were just five cans into a recently bought case of 24 dog food cans when this happened. We are heart broken and supicious if his death could have been brought on by the dog food. We hesitate to donate or give the remaining case of this food to charity or friends for dog consumption for fear it is contaminated.	14	Years	Collie - Bearded	Dog	50	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-153299	1/2/2014 13:12	Chicken Jerky by Authority Beef Eaters - Yam treats Boots-n-Barkley - chicken wrapped rawhide sticks Full Moon - chicken jerky Milos kitchen - Vital Life	<p>(b) (6) presented on 12/02/13 with inappetance except for chicken jerkey. He was less energetic. The owner described an orange diarrhea. Blood and radiographs were performed. A decreased phosphorus was noted on the blood work, everything else was normal. Radiographs revealed a soft tissue opacity at the heart base and mild bronchial cuffing, gas distended colon and mild ileus in the distal jejunum. (b) (6) was treated for colitis/enteritis with maripotant and metronidazole.</p> <p>(b) (6) was re-presented on 12/06/13 for not eating and drinking a lot. The owner noted that (b) (6) had never not eaten like this. Radiographs were re-taken and there was no significant finding. A vitamin B injection was given to stimulate the appetite.</p> <p>(b) (6) was returned to the clinic on 12/09/13 for the same thing - not eating except for a rawhide and a bully stick and she noted that (b) (6) was drinking and urinating a lot. She was concerned that (b) (6) had gotten food poisoning from the treats from China. Bloodwork was repeated including electrolytes and a urine sample was collected for a urinalysis and a urine creatinine/protein ratio. The results of the bloodwork indicated hypophosphatemia and hypokalemia. The U/A indicated glucosuria inspite of a normal blood glucose value and a USG of 1.016. These findings are significant for Fanconi's syndrome which is one of the reported diseases associated with treats from China.</p> <p>The dog was sent home on Tumil K and the owner was directed to give one centrum vitamin weekly along with dicalcium phosphate and aminofuel. All treats from China were discontinued. The dog is reportedly eating again but continues to show renal failure symptoms.</p>	5	Years	Terrier (unspecified)	Dog	25	Pound

EON-153281	1/2/2014 12:39	Nature's Recipe Grain Free Easy-to-Digest Chicken Sweet Potato & Pumpkin Recipe	Since approximately 12/16/13, (b) (6) started randomly urinating on the carpet. Up until that date, she had never had an accident in the house at all. When this started happening, it wasn't an issue of her not being walked frequently enough. We thought it was a spiteful result of my husband going to an overnight work schedule. Tuesday at 4am, my husband called (b) (6) to go outside and she wouldn't come downstairs. She was really slow and acting strangely. He finally coaxed her downstairs and she went out and did her business. When my husband went up to go to bed, he saw that (b) (6) had urinated on the floor again. Tuesday at 7:30am, I tried to get (b) (6) to get up to go outside and have breakfast (normal routine), and she wouldn't move at all. She wouldn't even pick up her head. I was unable to get her to go downstairs at all. I called the vet when I got to work and took their only available appointment. We went in expecting a possible Urinary Tract Infection. The vet did a urine test and said it wasn't a UTI. He then spun out the urine sample and said it contained bacteria. He put her on an oral antibiotic. When we got her home, she drank water and I hand-fed her individual pieces of dry dog food. She ate probably 1/2 cup of the food before she started refusing food. We did manage to give her one antibiotic capsule after she ate. After that, I was unable to get her to eat anything at all. I tried multiple types of treats as well. Late that night, I got her to walk just outside the door and pee, then she went straight to her bed and literally collapsed onto the bed. She was breathing extremely heavily and quickly. Because she hadn't eaten anything substantial, walking to the door exhausted her body. Yesterday (1/1/14), she still wouldn't eat any food at all. We never feed (b) (6) "people food" at all, but I decided I needed to try to get her to eat something. I made her a pancake and she ate all of it (I had to feed her by hand) and drank a lot of water. I was able to sneak another antiobiotic into a piece of pancake. I continued to try to offer dry food and treats all day. Later in the evening, she took several different treats and ate them slowly, so I tried to offer dry food again, both	7	Years	Pit Bull	Dog	59	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			by hand and in the bowl. She wouldn't touch it. She turned her head away and cowered as if the food was going to hurt her somehow. I made her another pancake and she ate a few pieces, then I gave her a few more treats just to get something in her stomach. Since she was happily accepting crunchy treats, I decided to open a new bag of dog food that we had in the closet. I took a few pieces and offered them to her by hand and she immediately took all of them. I poured a small amount in her bowl and she ate from her dish for the first time in 48 hours. She also ate this morning, but is still extremely slow, weak and lethargic. From my point of view, (b) (6) knows something is wrong with the original dry dog food. It's a food she's had before in the past (and we buy 25lb bags of food), so it's not a dislike for the food's taste.						
EON-153253	1/2/2014 3:39	Wellness Signature Select Chunky turkey and white meat chicken entray in sauce	On two occasions, (b) (6) vomited partially digested food approximately one half hour after ingesting the product. The third time the product was presented she would not eat it. This occurred only with the most current manufactured batch of the product with a manufacturing deadline of Dec. 13, 2013. Prior to this incident, she has eaten the product in a regular rotation for five to six months without a problem. She ate other kinds of wet cat food later on those days with no signs of distress. (b) (6) very rarely vomits excepting a hairball every two or three weeks.	15.5	Years	Russian	Cat	11	Pound

EON-153243	1/1/2014 20:21	Iams Proactive Health Mini Chunks	Note: (b) (6) was an American Eskimo Dog, but Canadian Eskimo Dog was closest breed listed. (b) (6) had bloody discharge from intestines at 3:00 am. I took her to veterinarian at 5:30 pm. She was diagnosed with hemorrhagic gastroenteritis (HGE). They started treatment immediately, but she died at 1:00 a.m. I brought her body to (b) (6) for postmortem. Report supported HGE diagnosis with specific findings of clostridial enteritis. My other dog (separate report to be prepared) had digestive problems before and after (b) (6) but he was treated and recovered. I checked Iams recalls and did not see my specific product listed. I have kept product and packaging and recently decided to submit report after seeing more recall information.	11	Years	Canadian Eskimo Dog	Dog	20	Pound
EON-153197	12/31/2013 15:06	9Lives Super Supper	Cat developed uncontrollable diarrhea, which only lasted about one day. I noticed that she was only eating a small amount of her 9Lives Super Supper over about two days and then she totally stopped eating the 9Lives Super Supper and began eating dry food (which is available at all times, but which she does not eat normally when 9Lives Super Supper is available). I then smelled of the 9Lives food in her bowl and noticed a foul odor. I then smelled of the refrigerated can and also noticed the foul odor. I then opened another can from the same 4-pack and noticed the foul smell immediately, although the meat did not look spoiled. I threw that can out, along with the first can. I opened the 3rd can and noticed that it did not smell "good" like a new can normally does, and only had a slightly disagreeable odor. I gave her a small portion, which she did not eat, as she once again ate her dry food instead. I put the opened can in the refrigerator and thought nothing more about it at the time, as I noticed that the cat was exhibiting cold symptoms. She continued to eat dry food only until I took her to the vet three days later and she was hospitalized with pneumonia. That was on 12-30-13, and she will be hospitalized until 1-2-13. This morning I retrieved the 3rd can of the 4-pack from the refrigerator and examined it with a spoon and found small dark areas that smelled foul like feces. I then opened the last (4th) can from the pack and it also contained these dark spots with the foul odor. I will supply the lot information for these two cans, which I still have. I did dispose of the food, as it was smelling very bad after I disturbed it, but have retained the cans, which have small amounts of food around the edge where the pull top separates from the can.	14	Years	Mixed (Cat)	Cat	6	Pound

EON-153080	12/30/2013 19:57	Nutro natural choice adult lamb and whole brown rice formula.	My husband purchased Nutro natural choice at Petsmart in (b) (6). We fed it to our dog for dinner and again in the morning. midday, she vomited huge amounts of undigested food and bile. Cleaning it up, I recalled that we had purchased the same food, also the lamb and brown rice adult formula, while traveling to (b) (6) the week of thanksgiving 2013. She threw up violently then as well, also after two meals, but I had marked it down to the 12 hour cartrip the day before. In November, I simply abandoned the unfamiliar food and bought some lams for the remainder of the trip. But this time we have been home and in a very healthy and regular routine of food and exercise. In both cases, she developed urinary incontinence and began very up characteristically wetting in the house and crying to be taken out to pee about every hour. She is a very healthy dog who lives closely by me, not off on her own. She is lethargic and very unhappy. Please recall this product. There are hundreds of reports of injury and deaths on internet based humane society websites. Thank you. (b) (6) The barcode on this package is 7910511367. It is best used by 25 October., 2014. The number under the date is 343f1LEB0207 :55.	1	Years	Great Pyrenees	Dog	60	Pound

EON-152964	12/30/2013 10:27	Pedigree Healthy Longevity	(b) (6) has started vomiting repeatedly. Sometimes it will be her food if she just ate but also during the night she will throw up just mucus or water. My other 2 dogs, a 8 month old Aussie and a 6 year old Westie, have not been affected. The Aussie has been eating puppy food but also gets into the Pedigree Longevity food. I had the two older dogs on Pedigree Healthy Weight food and had no problems. This only began when I switched over to the Longevity food. Today I began checking on problems with food online and found a lot of complaints. I am taking my dogs off any Pedigree and will see how (b) (6) does with the change.	7	Years	Sheepdog - Shetland	Dog	15	Pound

EON-152961	12/30/2013 7:51	Small Breed Blue Wilderness High Protein Grain-Free	I fed (b) (6) and my other dog (a female Chihuahua named (b) (6)) canned dog food (Blue Buffalo Small Breed Wilderness) and it looked like there were some small white things that looked somewhat like fish bones in the food that I'd not seen in that brand food before (according to the label there is no fish in that food). When I gave the food to the dogs they started coughing while they were eating it and acting like they wanted to get something out of their mouths (their tongues were kind of going in and out like they were trying to spit something out). I wasn't sure what was going on but I could see some of those small white things coming out of their mouths. After that happening I checked the next can I opened and it also had those white things in it. I took some of them out and they were mostly flat, sharp, and hard, although I was able to break them by pressing them between my fingers. My dogs like that food so I took the time to pick through it and take out the white things. However, the last few cans have had more of the white things (a lot more) and also they're bigger and harder. From the last can I used I found a piece that was about the size of a small dog tooth (Chihuahua dog size) and it was extremely hard and pointed and sharp and I could not break it no matter how hard I tried so, at that point I felt it was too dangerous to give that food to my dogs anymore, especially since they're small dogs and swallowing something that size would present a bigger danger to them than to a much larger dog. Also, my veterinarian had told me awhile ago that cooked bones are not digestible and should not be given to dogs, although I do not know if the white things in the food that I'm telling you about are bones. I saved the largest piece I found (that I described above) if anyone wants to see it. Also, both my dogs now cough everytime they wake up and they didn't do this before they ate those white things in the food but I do not know for sure if it's related.	6	Years	Chihuahua	Dog	9	Pound

EON-152887	12/27/2013 13:09	Hartz Oinkies Pig Skin Twists stuffed with Peanut Butter	(b) (6) we gave our 7 year old Pit bull, (b) (6), a dog treat and had her go lay down in our room while company was over. She acted fine and was heard barking and running around in the room. Company left and she came and joined our family, went outside and then went to lay down. About 2 hours after she ingested half a Hartz Oinkies pig skin twist with peanut butter she was lethargic and unable to walk. We rushed her to the vet, where were told she was in cardiac failure and nothing could be done. After researching the web for similar cases, I came across the recall on the same type of treats. Different flavor than the recalled ones, but still the same type of treat. I believe this epidemic with pet treats from China is not only in the chicken but in all protein. My dog has never had a reaction to any treat or to peanut butter. I would never feed her anything I thought would harm her. We loved her so much. I had to tell my 6 year old on (b) (6) (b) (6) that his dog died. Why are these tainted treats being sold? We lost part of our family over a treat? We are distraught. She was fine that morning and now she is gone. Her body is currently being held at the vets. I still have the half of the treat she ate.	7	Years		Fish	65	Pound
EON-152885	12/27/2013 11:51	9 lives indoor complete	I fed my cats 9 lives indoor complete cat food on the (b) (6). Both became ill and threw up within the hour of eating the food one time. They then refused to eat and would hardly drink. They vomited every time they drank water and did not want to move around at all. they would just lay somewhere and try not to move. (b) (6) lost bladder control completely and was in pain. He would meow loudly. By (b) (6) at one a.m. he died. That left little dog. She fought it as long as she could but she got to where when she tried to stand she would wobble over so she stopped trying. She would not eat but I gave her water and pedialite from a dropper until the (b) (6) (b) (6) when she passed at 8:30 a.m. When I spoke with 9 lives all they could say is we'll look into it but its any and everything in this world but our cat food. the manufacturers number on the bag I bought is 3308 mm 09 1503. My cats are dead and I don't want this to keep happening. I believe the cat food contains melamine toxicosis. The symptoms were much like renal failure. Please test the cat food for toxicity.	4	Years	Maine Coon	Cat	8	Pound

EON-152884	12/27/2013 9:27	Halo - Spots Stew heart chicken recipe. Grain-free cat formula	I opened a bag of food on Thursday morning - 19 Dec 2013. By Thursday night my cat had vomited 8 x's. Friday he vomited again 5 times. His last episode of vomiting was on Saturday morning at 0430. He was seen by the vet on Saturday at 9am. I was delayed in getting medical treatment due to an ice storm in the region (b) (6) that shut everything down for days. I was able to get someone to come to my home on Saturday morning to pick him up and get him to medical treatment. (I was out of town and a friend was watching my cat). The vet treated him with an antiemetic, gastric calming medication (Pepcid) and IV fluids. He recovered from symptoms by Sunday morning. My older cat (b) (6) had no medical issues but it was noted by my neighbor that he was not eating x 3 days. When she fed him tuna he ate. I was able to get someone to go to the store to obtain new food (a different brand) by Tuesday afternoon. My cats ate heartily when presented with the new bag of food. My suspicion is the new bag of food.	5	Years	Domestic Shorthair	Cat	19	Pound
EON-152820	12/26/2013 14:54	Purina beneful heathly weight	On Thursday Dec. 12, 2013, I purchased 2 bags of purina beneful healthy weight dog food. I opened one bag and fed them that night and the next morning and night. That night (b) (6) had severe gas and diarrhea. I stopped the dog food and started giving her boiled rice and chicken. Her stool continued to get worse and she started having foul smelling and bloody stools. I took her to the vet, it was recommended that I fast her for 24 hours then feed her small meals of boiled rice and boiled hamburger. I did this for 2 days and her stool got better and it started forming so I proceeded adding small amounts of the beneful dry dog food to the burger and rice. Her stool immediately went back to very loose and runny and foul smelling with a lot of gas. We decided to try a different food to see if the beneful food was the problem. We started giving her small amounts of science diet light dry dog food mixed in the rice and burger. Within 2 feedings her stool started firming up. We continued to add the science diet food in increasing amounts to the rice and burger in her feedings and her stool continued to improve. She is now only eating the science diet food and her stool is perfect. We had been feeding the purina beneful food for over a year with no issues. I am worried that there is a problem with this batch of food or the food period.	4	Years	Boxer (German Boxer)	Dog	66	Pound
EON-152819	12/26/2013 14:48	Meow Mix Tender Centers Cat Food	We purchased a 13.5lb bag of Meow Mix Tender Centers cat food. Inside the bag we found uncooked elbow macaroni noodles, glass decorative stones/marbles, a couple of large rocks and a freezer block in the shape of a half soccer ball.

EON-152818	12/26/2013 14:03	OI'Roy Grilled Strips	I fed both of my dogs chicken pet treats from Walmart. Shortly thereafter (about 24 hours?) (b) (6) developed diarrhea which became increasingly severe over time. On advice from my vet I withheld food for 24 hours then resumed a bland diet but he continued to have severe, watery diarrhea for over a week. I gave him bismuth salicylate on the advice of my vet and he began vomiting and pooping blood. Stopped the salicylates and switched to immodium. His watery stools slowly subsided on the bland diet and he had no more vomiting once the salicylates were stopped but then he began urinating indoors (which he never did before) in copious amounts. Now--45 days later his stools are normal but he continues to urinate very large quantities. Vet thinks he may have Faconi syndrome or some other form of high output renal failure but at this time I don't have the \$\$ for a workup. He's on a low protein bland diet and probiotics and seems to be doing OK for now.	16	Years	Crossbred Canine/dog	Dog	30	Pound

EON-152717	12/24/2013 0:06	OI' Roy Large Breed	<p>I normally buy a higher quality dog food. When we were down to around 1/4 of a bag of our normal food, I went shopping and picked up more dog food. The store was out of all large breed foods except for OI' Roy, so I bought it, and began mixing the new food with the old food. Around 2 weeks later, I switched her to OI' Roy, exclusively, and she continued on that food for several days. During the transition time, and after, (b) (6) was energetic and happy, but she was eating less dry dog food than normal. She continued to devour her treats and rawhide chews, but decreased the amount of dry food she was eating. She became skinny, to the point where I became concerned, and decided to speak with the vet. Unfortunately, the day I went (Saturday), they were closed. Then we had a snowstorm, and the next day that the roads were passable, it was too late, (b) (6) was dead.</p> <p>After her death, I decided to test some of the diarrhea she had left all over the floor in the hours before her passing. I tested it with a urine test kit that I have, and it definitely and quickly came back positive for blood. In addition to this, it had been at least 6 hours from the time she was last out to the earliest time she could have died (she died at some point overnight). She didn't wet once, not even at the time of her death, and she had full access to an unlimited water supply. The fact that she deteriorated so quickly (she was enthusiastically playing fetch on Saturday afternoon, and died on Sunday night), and that so many others state the same experience with OI' Roy in their pets, leads me to believe my dog died due to OI' Roy dog food.</p> <p>The reason I'm writing this is because I'm very concerned. Many, many people have experienced almost identical situations as myself, and yet, OI' Roy dog food is still on the market, there is no recall, and aside from what the consumers have been writing, there is no warning against this dog food. And yet, it is out there, killing our dogs.</p>	10	Years	Doberman Pinscher	Dog	65	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-152649	12/23/2013 15:36	Pedigree Large Breed Nutrition for Dogs	(b) (6) was given this food starting the evening of 12/9. The next day he had loose stools but by Thursday this progressed to explosive diarrhea and the inability to control his stools. We contacted our vet via telephone who advised us to stop the food immediately and feed both of our dogs boiled chicken and rice. Our older doberman responded well but (b) (6) diarrhea continued. (b) (6) urine started to darken heavily to a golden brown color and was scant in output. Friday he was so weak he could barely walk. He was immediately taken into the vet who diagnosed him with bacterial food poisoning. He was treated with antibiotics and is recovering well now.	9	Months	Doberman Pinscher	Dog	51	Pound
EON-152562	12/23/2013 11:33	Iams Healthy Naturals with Wholesome Chicken	I have been feeding my German Shepherd Iams Healthy Naturals with wholesome chicken for about 4 years now. I switched to it because I was looking for something healthier for him. He started experiencing some diarrhea, but was otherwise healthy. He was drinking plenty of water so we thought he would be ok. Then he started to walk a bit funny and gradually lost strength from there. Diarrhea got worse and he stopped eating and drinking altogether. Once morning he could not walk at all and died later that day. I do not have the lot numbers of the bags of food that he ate as I had already thrown them away, but I am convinced that his illness was a result of the tainted dog food and thought I should report the issue.	8	Years	Shepherd Dog - German	Dog	110	Pound
EON-152561	12/23/2013 11:24	Sweet Potato , Sweet Potato	Both Dogs were starting to drink a lot more water, and had to urinate much more even several times a night. I took them to the vet and both showed signs of sugar in their urine. They were then given blood tests to see if it was diabetes or something else. Following the other tests, no sugar was found in their blood so diabetes was ruled out. My vet's conclusion was that both has Fanconi disease. The main treat both dogs were given on a daily basis was Sweet Potato Fries (Beef Eaters brand). I had read about the dangers associated with chicken jerk treats and rawhides from China, but had not heard anything about sweet potato fries. I thought I was giving them a safe and healthy treat, since (b) (6) was on a low protein diet. The prior dog died 5 years ago and she was only 7.5 when she was diagnosed with early kidney failure, she passed away about 6 months later and at the time our Vet could not find the cause. Reviewing the information she is sure this was a factor in the kidney failure.	5	Years	Other Canine/dog	Dog	6.5	Pound

EON-152505	12/23/2013 9:21	JERKY TREATS DOG SNACK	I AM VERY ROUTINE WITH MY DOG. HE HAS THE SAME FOOD/BRAND FOR MONTHS AND NO NEW TREATS. (b) (6) MY DOG BECAME SLUGGISH WHICH IS QUITE THE OPPOSITE. BY (b) (6) NIGHT HE WAS LETHARGIC AND BY (b) (6) E WAS IN AN ANIMAL HOSPITAL WITH A FEVER OF 106 AN (b) (6) TE BLOOD CELLS. ON (b) (6) A REPEAT CHEST XRAY WAS DONE AND HE HAD SEVERE PNEUMONIA. HE ALWAYS HAD AN UNDETERMINED DIAGNOSE BUT HAD A SIGNIFICANT INFECTION. ON OUR ABOUT (b) (6) I GACE MY DOG NEW JERKY TREATS FROM COSTCO THAT ARE MADE BY DEL MONTE. I HAVE NEVER USED THESE TREATS BEFORE AND HE RARELY GOT A JERKY STYLE TREAT. THESE TREATS WERE \$4 OFF SO I THOUGHT I WOULD GIVE THEM A TRY. THEY WERE BOUGHT FROM COSTOCO ON (b) (6) (b) (6). MY DOG NEVER RESPONDED TO ANTIBIOTICS. THE EMERGENCY VETS ROUTINELY ASKED IF HE GOT INTO SOMETHING AND THIS IS THE ONLY THING HE COULD HAVE. HE IS BY MY SIDE OR IN A CRATE WHEN I AM NOT HOME. THIS WAS THE ONLY THING NERW THAT WAS INTRODUCED TO HIM. HE LAST LOTS OF BLOOD AND LABS AVAILABLE FROM (b) (6) (b) (6). DUE TO INCREASED BLEEDING AND SHORTNESS OF BREATH, MY DOG HAD TO BE EUTHANIZED.	2	Years	Mixed (Dog)	Dog	85	Pound
EON-152494	12/22/2013 22:48	Pet Shoppe chicken jerky Walgreens brand, Pet Shoppe Duck Jerky	(b) (6) developed vomiting, inappetance, and weight loss in September. She had been healthy prior to that time. In July and August of 2013, owners discovered jerky treats and fed her these treats daily. This immediately preceded her illness in September. When she presented to ISU on 10.8.13, (b) (6) was mildly azotemic with a glucosuria and ketonuria, but no hyperglycemia. She also had casts further indicating proximal tubular damage. Urine culture and leptotiters were negative. Her azotemia worsened during her stay despite aggressive fluid therapy (ins and outs). Clinically, she responded well to supportive care with fluid diuresis and gastoprotectants and began eating well, did not vomit, and was bright and alert. Glucosuria was severe enough to cause hypoglycemia that necessitated dextrose supplementation transiently. Glucosuria decreased from >2000 mg/dl to trace during her stay at ISU. After 10 days of aggressive fluid diuresis, she was discharged with a creatinine of 2.4. Her creatinine worsened post discharge, but her azotemia is gradually resolving over time.	1.5	Years	Mixed (Dog)	Dog	6.8	Pound

EON-152473	12/22/2013 8:24	purina one smartblend chicken and rice and lamb and rice upc 17800-14939 33181079 1433107 upc 17800-14939 32901079 0940109	upc 17800-14939 33181079 1433107 upc 17800-14939 32901079 0940109 2 unknown-lamb and rice- both bags were thrown out and the food is in a food bin. We have been feeding our 3 dogs Purina One for quite some time. The last 30 lb of lamb bag one of my dogs stopped eating and another would only eat about 1/4 of her food. We feed them about a 1.5 cups per day. I didn't think anything of it. Then one threw up. We didn't think anything again. It was alot of bile. The bag was finished and I bought two more. One lamb and 1 chicken. The dogs have refused to eat either of them. We have 2 dogs that never refuse food. Neither are eating unless they are starving and then their stomachs are upset. Now all three dogs are not eating which is what has really brought the attention that something is wrong with the food. We will be throwing the food out and changing brands. We previously fed them Chef Micheals and one of the dogs got sick, which is why we changed to purina one.	4	Years	Terrier - Boston	Dog	24	Pound
EON-152454	12/21/2013 16:42	Chicken & Green Pea Formula Dick Van Patten's Natural Balance	He ate the cat food late afternoon, threw up several times the next morning & had diarrhea several times. He also acted like he didn't feel good. He seems fine now. It lasted about a day.	6	Years	Domestic Mediumhair	Cat	9	Pound
EON-152404	12/20/2013 18:33	AvoDerm Original Formula with Beef meal	Have been buying Avoderm beef for my dog for over 5 years and this bag when I opened it smelled rancid. My dog would not eat it. Something is wrong with it. I wrote the company and tried to call the number on the bag, but no one picks up. Bag marked 20 March 14 0130321B870801805 JH UPC 0 5290702099 5						
EON-152241	12/20/2013 1:24	Wagon Trails Wagon Wheels	the antibiotics upset her stomach so she didn't want to eat. I was concerned so I tried to get her to eat something. She liked the wagon trails chicken jerky wheels so I cut up about 4 of them into tiny little pieces and she ate them all. 2 days later she died of kidney failure at (b) (6) arms.	15	Years	Pekingese	Dog	10	Pound

EON-152061	12/19/2013 9:21	Fresh Pet Dog Joy Treats	December 7th he was given a Fresh pet dog joy treat (made with chicken) that was purchased at BJ's in (b) (6) . It was refrigerated in the store and at home. Each day for the next several days he was given a treat, but each day he was less and less hungry until he stopped eating everything December 12th. He was hospitalized with vomiting, anorexia, kidney failure, low albumin, increased ALT and ALP, and trace glucose in his dilute urine with hematuria	10	Years	Retriever - Labrador	Dog	67	Pound
EON-152028	12/18/2013 22:42	Beggin Strips Applewood Smoked Flavor	I began giving my dog Nestle Beggin Strips yesterday (12-17-13). I gave him two yesterday and one this morning. He laid around all afternoon, seeming like he was not feeling well. He didn't want to eat or get up. Around 6 pm he began throwing up and has vomited 3 times (it is now 9:26 pm). He is shaking and does not want to move around. The only thing that he has had that is not a normal part of his diet is the treats. I intend to take him to the vet tomorrow if he has not improved. He is obviously in pain.	7	Years	Dachshund - Standard Smooth-haired	Dog	17	Pound
EON-152009	12/18/2013 17:18	Canine Gourmet Chickn & Biscuit Wraps, Dreambone	Client presented (b) (6) on 9/30/2013 for a re-check of his dermatitis and mentioned increased drinking/urinating. A urinalysis was performed which showed isosthenuric urine with 250-500mg/dL glucose. Blood for a CBC and chemistries was drawn and sent to Marshfield laboratories. CBC was essentially normal, T4 total was normal, AST and BUN were marginally low, cholesterol was marginally elevated, rest of chemistries, including Total protein, Albumin, and glucose were within normal limits. Client was asked to provide a repeat urine sample in a week to check urine specific gravity. Bailey was put on Amoxicillin 100mg bid for 14 days pending bloodwork. Urinalysis on 10/9/2013 showed isosthenuric urine with 1000mg/dL glucose. Blood glucose on portable meter the same afternoon was 80mg/dL. Sent urine sample to (b) (6) for Fanconis testing 10/25/2013. Sample positive for Fanconis syndrome	6	Years	Maltese	Dog	12.7	Pound
EON-151878	12/18/2013 9:00	Kingdom Pets Chicken Jerky	Almost two years ago, I was giving both dogs a chicken jerky treat once a day. Both dogs began vomiting (more like a horrible hacking cough) clear to foamy mucus-like liquid and began drinking more frequently. The symptoms were worse in my mixed breed hound than in my Staffie mix. There was a loss of appetite and 'tired' behavior. When we about to purchase another package, we were warned by a cashier that she would not feed the jerky to her dogs and explained why. We stopped feeding the jerky and tossed the remaining package and in a few weeks the symptoms disappeared. What I am wondering is if these symptoms could be linked to any of the weird strains of avian flu (H7N9, or H10N8) in China?	8	Years	Mixed (Dog)	Dog	70	Pound

EON-151877	12/18/2013 8:57	Good n Fun Triple Flavored Chews Healthy Hide	11/5/13 patient presented for normal, yearly, healthy pet exam and bloodwork and vaccines. Bloodwork showed acute renal failure (BUN 35, creatinine 3.4). Patient had a history of normal bloodwork 1/4/13. Patient had recently been eating "Good n Fun triple flavored chews" jerky that was made by Healthy Hide in China for the past week prior to bloodwork. Follow up testing was done to rule out other causes of renal failure including Lepto PCR, urine culture, abdominal radiographs and no abnormalities were found on any of these tests. Follow up bloodwork, after discontinuing the treats, showed complete resolution of renal failure.	1.5	Years	Schnauzer - Miniature	Dog	12	Pound
EON-151870	12/17/2013 21:45	Kingdom Pets wholesome Duck & Sweet Potato	She started vomiting over and over several hours after eating a few treats and continued through the night.	14	Years	Retriever - Labrador	Dog	66	Pound
EON-151851	12/17/2013 19:12	Royal Canin Veterinary Diet Urinary SO Feline canned	I ordered 2 cases of canned wet Royal Canin Urinary SO feline veterinary diet from pet food direct.com in mid November. When I opened a can on either wednesday, December 11th or Thursday, December 12th to feed our cat I noticed the top of the actual moist cat food around the rims had small black and green spots around it. I have used this product for a while and know that is not normal. The spots were only on the top surface and did not go down into the food. I contacted petfood direct to report the problem, and was instructed to through out the cans as they sounded bad and more would be sent out. I want to make sure no one feeds poorly canned food to their pets.						
EON-151844	12/17/2013 17:07	Alpo prime cuts	became sick, eat very little, drink a lot of water, urinate a lot, lethargy he ((b) (6) was fed Purina Alpo prime cuts dog food. 2 other neighbors dogs became sick (same s/s) after eating the Purina dog food		Years	Crossbred Canine/dog	Dog

EON-151843	12/17/2013 17:06	Purina Dog Chow Light and healthy	I gave my pet rats a small handful of Purina Light and Healthy last Saturday evening. Sunday afternoon I noticed something was wrong. (b) (6) was completely paralyzed, and the other three were lethargic and unresponsive. I tried to take them to the vet, but none of the ones that treat exotic pets were open on Sunday. I took them home, put a heating pad under them, and tried to get them to drink water and eat. They were mostly unresponsive but seemed very thirsty once I got them started drinking. (b) (6), the oldest, died first. Then (b) (6) the second oldest, followed by (b) (6) and finally (b) (6). Their symptoms included: paralysis, shaking, lethargy, extreme thirst, labored breathing, twitching/seizures, urinating blood, eye bulging, loss of body heat, loss of appetite, rapid heart beat, clumsy movement, and eventually death. (b) (6) who lasted the longest, seemed terrified toward the end, attempting to crawl away and looking around wildly, which lead me to suspect she was hallucinating.	2	Years		Rat	8	Ounce
EON-151819	12/17/2013 15:21	Cadet Gourmet Duck Breast	She has developed severe weakness and atrophy of the hip muscles, and that makes it difficult for her to bear weight on her hind legs after she has been laying down for a while. First noticed the atrophy about 18 - 24 months ago. Hard to blame it on the Chinese duck jerky treats we'd been giving her, but since other health problems were reported in the news, I figured I should report it in case there were other dogs with similar afflictions.	6	Years	Mixed (Dog)	Dog	42	Pound
EON-151728	12/17/2013 13:21	Cadet duck jerky treats	Ate Cadet duck jerky treats. After giving about 1/4 of the bag the owner realized it was made in China and returned it to the store. About 2 weeks later the dog became ill, initially with gastrointestinal signs (anorexia, vomiting), then with Fanconi-type disease (sugar in urine, blood sugar normal). Urine culture and Leptospirosis titer negative, now mild elevations in kidney enzymes. Dog is still very polyuric/polydipsic and not eating well. I have consulted with 3 boarded internal medicine specialists and all feel it is due to jerky treats.	4	Years	American Hairless Terrier	Dog	7.6	Pound

EON-151654	12/17/2013 11:57	Diamond Naturals Lamb & Rice	<p>Purchased a 40-pound bag of Diamond Naturals Lamb & Rice dog food and by the end of the bag, my dog was listless, could not walk or hold his head or tail up, and was severely anemic with white gums and tongue. Took him to the vet and bloodwork confirmed his anemia. He was given a blood transfusion from another dog - not mine, I had to borrow someone's dog - and he was given fluids. The dog responded to this intervention however, there was no cause of the issue so an ultrasound was done to see if the dog had internal bleeding, etc. There was no free fluid to be found and no masses, etc. in the abdomen or spleen, intestines, etc. Consequently, after \$700 the vet just said it was something he ate or otherwise came in contact with.</p> <p>I chalked it up to thank god he is still alive and went about getting him better. I was in a Tractor Supply store recently when someone returned a bag of Diamond Naturals Lamb & Rice dog food stating their dog had bloody diarrhea and was vomiting ever since feeding it this food. After speaking with this couple, I decided to report the product. These pet owners called Diamond and got nowhere they said.</p>	5	Years	Shih Tzu	Dog	25	Pound
EON-151509	12/16/2013 14:27	Eagle Pack - Puppy - Large & Giant Breed - Natural Dog Food	We slowly switched her from IAMS for puppies to Eagle Pack Natural Dog Food for Large and Giant Breeds (Puppy). The first full bag we bought for her - she had no problems with it. This second bad of food we got for her- she started to have diarrhea and loss of appetite quite often. We have stopped and switched to new diet food about 2 weeks ago and she devours the new food and has not had any signs of diarrhea since.	9	Months	Retriever - Labrador	Dog	40	Pound

EON-151332	12/13/2013 15:38	Dingo American Made Market Cuts Chicken Jerky	<p>Patient was given jerky treat ("Dingo" - American Made Market Cuts Chicken Jerky) roughly 7-10 days prior to onset of clinical signs (~3 weeks ago). Ten days ago (12/3), patient became anorexic and lethargic but continued to drink water normally. Continued for 3 days and vomited foamy bile 4-5 times overnight from 12/6 to 12/7. Went to veterinarian on (12/7) and blood work (CBC, chemistry, total T4) revealed low phosphorous (1.0; RI:2.5-6.0), sodium (126; RI:139-154), potassium (2.5; RI:3.6-5.5), chloride (88; RI 102-120), and T4 (<0.5; RI:0.8-3.5), and a mildly elevated glucose (148; RI:70-138). A urinalysis revealed a specific gravity of 1.013, trace protein, 2+ glucose-strip, 1+ ketones, and 1+ occult blood). A fecal exam was negative for parasites/giardia. The remainder of the blood work and urinalysis was within the reference interval. Patient was administered SQ fluids and an anti-vomiting medication (maropitant citrate?) by veterinarian. Patient perked up the following day but continued to be anorexic. Veterinarian seen 12/7 suggested offering crème cheese, but patient was not interested and continued to be anorexic. The patient ate small amount of bologna on 12/11 and 12/12. Owner syringe fed 40 mls from 12/12 to 12/13. Owner improvement in patient last night and today (12/13) due to patients attitude, interest in playing, and barking. Physical exam today (12/13) revealed lethargy but was otherwise unremarkable. Blood work (electrolytes and cPLI) today revealed a normal cPLI and low Na (141; RI:144-160), K (2.2; RI:3.5-5.8), and Cl (99; RI:109-122).</p> <p>The owner reports that the patient's normal diet consists of whatever the human caregivers are eating. The patient does not dog food. The diet include fruits, vegetables, fast food meals, lunch meat, and a variety of other foods. The owner reports that the patient's water intake has been normal, although the patient may be urinating a bit more in frequency. The patient defecated a small amount of dry feces twice during the prior ten days.</p>	4.5	Years	Mixed (Dog)	Dog	10	Pound

EON-150819	12/10/2013 16:48	Nulo Naturals Salmon & Brown Rice Recipe	<p>I found a long, sharp metal nail mixed into my dog's food. The company, a high-end pet food maker out of Texas has been exceedingly nasty, unresponsive and unwilling to do anything about it. They operate under the name Nulo, Inc. and claim to be one of the safer pet foods on the market.</p> <p>I'm very concerned that other bags might be contaminated. If a large, obvious nail can go undetected I wonder what else could be happening with this company? I feel that other pet owners could be in rather immediate danger and perhaps this time it's a fatal outcome.</p> <p>I want to protect consumers from the remaining, potentially life-threatening bags currently or soon-to-be sold in Whole Foods and elsewhere across the West.</p>

EON-150570	12/9/2013 12:52	Ever Pet Beefy tips Dog Treats	Fed (b) (6) beefy tips dog treats and 1 1/2 to 2 days later she was very ill. She could not go to bathroom, eat ,or barely stand or walk. I carried her to the vet on Sept 16th. He treated her with antibiotics but she didn't improve. Her condition was worse by Saturday. I took her back to the vet Sat Sept 21st. He kept her until the 23rd. He took xrays and found she had a blockage and infection in her intestines. He changed her antibiotics and other treatment(?). She started improving over the next week or two weeks. I contacted DOLGENCORP,LLC 1888-309-9030 they said they would put in a claim to the manufacturer Sunshine and I would receive a call. I received the call first week of December. They are sending someone to pick up the treats (dec 9-11) to have them analyzed at their lab and an outside lab.	3	Years	Terrier - Yorkshire	Dog	4	Pound

EON-150509	12/8/2013 13:30	Purina Dog Chow	<p>I have two dogs, last weekend we brought a bag of Purina dog chow LOT # 331910850326L06 exp. May 2015 scu: 1780015836. My one dog (b) (6) started to have diarrhea Monday into Tuesday night and Wednesday. We thought he had a stomach bug so we just gave him rice for a few days and it cleared up. My second dog (b) (6) stayed on the food showing no signs of illness in the beginning of the week. on Friday when I came home from work both dogs had major accidents throughout the house (which is not like them). On Saturday they both had diarrhea all day, having out go out every 45 minutes to an hour. Thinking back we realized it was a new bag of dog food (not a new brand to them, they have been on Purina for a long time). We spoke with a vet who said it sounded like we had a bad bag of dog food and to stop using it give them rice and boiled ground meat. Later Saturday evening around 11 p.m. (b) (6) started bleeding severely when going to the bathroom. we rushed him to the ER where they ran tests and admitted him for alarming amounts of bleeding, diarrhea and dehydration. He is still currently in the the hospital, responding well to treatment but still bleeding. The ER doctor told me to discontinue using the food because she believes this is what caused the problems. By the end of all of this my vet bills will be over \$1500, I have to get my carpets professionally cleaned due to the uncontrolled bowels they both have and new dogs beds due to the bleeding. I also, spoke to a family friend who said that they had a dog who also go sick using Purina Little bites, Lot # 331510850055L02. I know that Purina had a recall back in Sept. for a different line; Purina One but I am wondering if these bags of food were cross contaminated. I will not throw the food out, if their is some place I can take it to get it tested please let me know.</p> <p>Thanks,</p> <p>(b) (6)</p>	10	Years	Other Canine/dog	Dog	54	Pound

EON-150479	12/7/2013 12:06	Infinia Zen Food Salmon and Sweet Potato recipe	<p>I breed German Shepherds. I have 14 dogs. 2 are on dry kibble (Infinia) and the rest on RAW diet. I just finished a bag of Bison and sweet potato, have had salmon and sweet potato before, we usually alternate so I just opened a brand new bag of Salmon and Sweet Potato. Fed both dogs (a 3.5 yr old neutered male and a 1 yr old intact male) last night meal with the salmon and sweet potato. This morning both were violently ill with severe diarrhea and vomiting... both threw up 2 and 3 times... till nothing was left to throw up. There is no discoloration in their poo or their vomit... nothing indicating they had eaten anything other than the kibble which basically came back up undigested.</p> <p>This is highly unusual for these dogs ... both have all their shots, have been very healthy and had no other issues... the rest of the pack is fine but had not eaten the kibble. I am suspect of the salmon having issue or a possible salmonella outbreak. Both are fasting today and will be placed on a Chicken and Rice recovery diet until I am sure they will not have any further issues.</p>	3.5	Years	Shepherd Dog - German	Dog	95	Pound
EON-150477	12/7/2013 11:51	Canine Prime Chicken Sweet Potato Wraps	<p>I recently purchased these new treats CANINE PRIME CHICKEN SWEET POTATO WRAPS.</p> <p>I gave the dog one or two on Tuesday night. I gave him another two on Wednesday night.</p> <p>He died Thursday morning.</p> <p>This is the only new food in his diet. I didn't think he died because of the new food until someone asked me if I had fed him jerky made in China. When I came home yesterday, I looked on the package and these treats were made in China.</p> <p>I have kept the remaining treats in the package.</p>	9	Years	Pit Bull	Dog	86	Pound

EON-150463	12/6/2013 18:54	Alpo Chop House Filet Mignon Flavor	Purchased a dozen cans of Alpo Chop House dog food last week. Cans were stored at room temperature in a plastic drawer unit. One of the cans exploded, like a bomb going off. It shook the entire drawer unit. Dog food was on everything in the drawer, ruining all of the drawer contents. The food also had a very strong horrible odor. It made me gag when I smelled it. I have put the exploded can into a Ziplock bag, and have put all of the other drawer contents in bags as well. I am afraid to use any of it, fearing that it may all be contaminated with botulism or whatever contaminants made the can explode. I had to discard 11 5.5oz cans of Alpo Chop House food, 4 22oz cans of Alpo Chop House dog food, 14 Blue Buffalo single serve dog food entrees, 14 4.5oz bags of Snausages dog treats, 1 1lb-9oz bag of Beggin Strips dog snacks, 1 6oz bag of Beggin Strips dog snacks, 1 25oz bag of Pupperoni dog snacks, as well as the plastic drawer unit that everything was stored in. The cans of Alpo were purchased at Walmart in (b) (6) between Nov 23rd and Nov 30th of 2013. I have contacted the manufacturer who advised me that I will be contacted by Sedgewick Claims Services regarding the damaged items. I have also contacted Walmart where I purchased the items, and they told me to contact the manufacturer. If the food was in fact contaminated with botulism or whatever else, then I assume it might not be the only can affected.						
EON-150456	12/6/2013 18:15	Purina Friskies Cat Food Mixed Grill Classic Pate	My two cats eat Friskies canned food Pate, the type being reported is the "mixed grill" 50000 42724. (b) (6) cat eats dry food as well. In the last couple of weeks the canned food has only been partially eaten and I thought my husband was putting too much on the dish. In the last five days the older cat (b) (6) stopped eating, she does not eat the dry food. She lost at least half of her weight and became listless, I thought it was because she was just old and was calling it quits. I was going to call the vet for an appointment today, but last night I opened up a can of Fancy Feast and (b) (6) went to town on that and came back for more several times during the night and again today. (b) (6) has been eating Friskies canned food for at least three years, the same type without problem, but lately she has had diarrhea and vomiting before she stopped eating, my other cat (b) (6) stopped eating the Friskies but continued eating the dry food. I went through all of my Friskies cans today and had a few cans of other pate, I opened an ocean fish one and both cats ate it. I am sure that something is wrong with that lot#I provided. I've thrown many cans of it out not realizing that there was a problem with it.	1	Years	Domestic Shorthair	Cat	12	Pound

EON-150447	12/6/2013 16:48	Dingo Muchy Stix Chicken in the Middle!, Purina Beggin' Littles bacon flavor, Ceasar canine cuisine chewies prime rib flavor	Pet presented Monday, 11-11-13 for vomiting, poor appetite and lethargy of 4 days duration. Mention had been made to feeding some new treats within the last 1 to 2 weeks. (Dingo Muchch stix by Eight in One Pet Products (made in China), Cesar Canine Cuisine Chewies Prime Rib Flavor (distributed by Mars Petcare US), and Purina Beggin' Littles bacon flavor (produced in Clinton, IA and Dunkirk, NY). The pet was depressed, dehydrated and azotemic with elevated Potassium. After several hours of IV Fluid therapy, the azotemia almost reversed but the potassium remained elevated and the pet showed only a little improvement in mentation. Differentials included Addison's Disease and kidney disease. Ongoing supportive care along with ACTH Stimulation testing were offered and declined. The pet was taken home overnight and returned the next evening for euthanasia. The owner is suspicious that he became sick after eating some of these new treats.	6.8	Years	Chihuahua	Dog	9.75	Pound
EON-150377	12/6/2013 12:36	Pet-Shoppe duck jerky premium duck dog treats	I have been given (b) (6) and my little Female Chihuahua Duck jerky treats for several months and used as a treat, not a meal. They appeared to love them and so I continued to purchase these from Walgreens. Two days before Thanksgiving, (b) (6) was taken to the vets as he appeared to be straining and seemed constipated. I did not realize that he was not urinating. He then began to projectile vomiting and was taken back to vet and tested and found to be in renal failure and also had 5 kidney stones which prevented him from urinating. He was admitted to ER vet hospital, catheterized and put on iv for dehydration. Surgery could not be done until his level were back in normal range. Day after Thanksgiving, he had his surgery, removed 5 stones, and sent home. He was later returned to vet for pain and inability to urinate and admitted again overnight to get levels to stabilize once more. He was kept that following day until evening and came back home where I continued to keep him comfortable with pain medications and special kidney diet food. He seemed ok. Two days later, (b) (6) suffered his first seizure which lasted approx. 60 secs. Notified the er vets and since it was his first one, they suggested to let him rest at home. Regular vet called me that next day with lab reports from kidney stones. (b) (6) is now suffering with liver disease and his prognosis is unknown as many dogs will do well with protein free diets and medications and others do not live long. I also have another female chihuahua who suffered similar effects of these treats. She was vomiting blood with bloody stools.	2	Years	Chihuahua	Dog	16	Pound

EON-150198	12/5/2013 9:21	Abady granular food for cats	<p>A 9 year old CM domestic shorthair cat was presented for hematuria of chronic duration (not always symptomatic but presented for dysuria). Culture of the urine revealed Salmonella species. On further questioning of the owner, it was determined that the cat ate Abady granular cat food as part of his overall diet (which, when called, they claim is not raw - all the ingredients are cooked before going into the food but then there is no heating of the food itself). When further testing was done on this cat, the food, and his environment, there were multiple positive tests for Salmonella - 2 isolates in urine, 3 isolates in the Abady food, 3 isolates in this cat's feces, and 2 isolates in the feces of another cat in the household.</p> <p>I can provide additional information, including owner information, if needed. Salmonella cultures were speciated by (b) (6) - that information is available as well, if needed.</p> <p>Is it possible to test additional samples of this food?</p>

EON-150192	12/5/2013 5:24	Purina Busy Bone Ultimate	<p>Last week, we bought our dog (b) (6) two large Purina Busy Bones (of the variety intended for dogs over 55 pounds -- he's 62 pounds). We gave him the first and he gnawed through it pretty quickly. I noticed later that day that he had watery, pale stool, but as we were at my fiancée's parents' house for Thanksgiving with a number of people and other animals, I assumed it may have been a reaction to all the excitement and unusual goings-on. His symptoms cleared up pretty quickly and we didn't think much of it.</p> <p>This morning, we gave him the second Busy Bone. At around noon, he started giving me urgent indications that he had to go to the bathroom, so I took him outside and he had pale, runny stool. This has continued every couple/few hours or so ever since. It's now 5AM the next morning, and I just woke up because I heard him whimpering and took him outside.</p> <p>I did a Google search earlier yesterday to see if anyone else has had this problem, and a number of others have said that they have, that the Busy Bone gave their dog diarrhea, in some cases lasting for a few days. I'm going to try some dietary adjustments and hopefully he'll be better soon.</p> <p>The fact that it's happened to a number of others is cause for concern. This doesn't seem like an isolated incident.</p> <p>Also, I'm indicating on the form below that he's "Stable", but what I mean is that his condition is neither worsening nor getting better at this point. As I said, a number of others said that their dog had symptoms for a few days before recovering.</p>	15	Months	Shepherd Dog - German	Dog	62	Pound

EON-150183	12/4/2013 23:00	Sam's Yams Sweet Potato	I usually purchase Freshpet refrigerated sweet potato treats however my husband saw Front Porch Pet Sam's Yams sweet potato treats (dried) and wanted to purchase them. We did, gave 1/2 treat to each of my 3 dogs and our female vomited 3 times that evening and night and into the next morning. I can only suspect it had something to do with those treats as their dog food is all the same, unchanged and no other treats or medications were given to her. She stopped vomiting and appeared to be doing ok although I realized she is a little less energetic than usual and not as eager to eat now in the am. I looked online to see if there was a recall/issue with those treats and saw couple other postings of this same issue. Then I received my Whole Dog Journal in the mail, read that last night and saw that the toxic chews weren't just dried chicken jerky, there was also indication with "dried sweet potato treats". Watching my dog to see if any other issues arise, will call and notify vet tomorrow to see plan of action.	6	Years	Bulldog	Dog	55	Pound
EON-150172	12/4/2013 19:48	Life Protection Formula with life source bits Blue Buffalo Co.	Opened new brand of food, within 24 hours after eating, dog developed uticaria, swelling of the neck, vomiting, extreme lethargy. Symptoms were persistant for 72 hours with gradual improvement after dexamethasone, diphenhydramine, famatedine, sucralfate, and cerenia therapy with IV fluids. Main ingredients of chicken and rice had been fed previously without any problems. Dog had been adopted 2 years previously with no history, but no signs of allergic reaction in past 2 years. Had also been on Dasequin supplements for 1 year.	10	Years	Boxer (German Boxer)	Dog	65	Pound
EON-150137	12/4/2013 15:48	Esbilac Puppy Milk Replacer	We lost 4 puppies over 2 day period after using Esbilac. We took the remaining two pups off this formula and used a home made mixture of goat's milk, buttermilk, vitamin drops, half-half. The remaining two pups were doing well. Since I was concerned about insufficient vitamins- I added a small amount of esbilac after 2 days of homemade formula. One pup consumed 2 ounces, was quite vigorous at midnight last night. At 3 am, he refused to eat, by 6 am showing signs of respiratory distress, and began hemorrhaging from nose and mouth. One puppy remains out of litter of 6. All showed rapid signs of decline- with 6-8 hours. No diarrhea. Symptoms appear more neurological--affecting breathing response and body temperature. Small amounts of blood from gums, mouth and nose. (b) (6) is in good health, nursing but not enough milk. The pups seem to have trouble breathing, body feels cold despite being in incubator. Death occurs with in a few hours of first signs--crying. Our vet recommended keeping the remaining puppy on homemade formula.	2	Days	Alaskan Malamute	Dog

EON-150030	12/3/2013 15:39	Purina Dog Chow Complete Balance	(b) (6) has not been his usual playful self for a couple of days, he has been somewhat lethargic and not moving around much. I've had to MAKE him get up to go out. He has had some diarrhea for a few days. Last night he vomited and had diarrhea all through the house. I took him to the vet this morning. He was once again diagnosed with pancreatitis, brought on by something he had eaten. The vet kept him to give him fluids and antibiotics through an IV. Later this afternoon, my boyfriend went to my house. (b) (6) had been home alone all day. She had vomited and had bloody diarrhea all through the house. She has now been taken to the vet. After some research online, several people within the past month have experienced the same problem with Purina foods. Their animals have had liver damage, vomiting, diarrhea, and bloody stools and vomit. Upon inspection of the bag, it expired on October 25, 2013, but I just purchased the bag last week.	9	Years	Boxer (German Boxer)	Dog	75	Pound

EON-149953	12/3/2013 13:18	Purina Beggin Littles bacon flavor	I just lost the family dog. 12/02/13 We took him to the clinic (b) (6) . He collapse at home so we rush him to the dr. They ran blood work the only thing that had shown was the live enzene was high. But when the dr called he said when they vomit clear stuff like he did is a sign of Toxin. The only thing he had different was the Purina Beggin Littles. Bacon strips. He hasn't eaten anything different he is watch all the time.						
EON-149933	12/3/2013 12:09	Milo's Chicken Jerky; Waggin Train Chik'n Biscuits Recipes	(b) (6) wasn't eating very much, drank more than usual, lethargic, lost his voice when barking. Took him into drs., they did tests on him and sent us immediately to the Animal Hospital. -- He was treated there, with no improvements, symptoms became worse. -- I stayed in constant contact with his regular doctor - and when visiting him during visiting hours, his appearance had worsened overnight, and he was getting worse. -- In addition to pictures and video recordings of him, I've documented all text messages w/doctor. -- I also have all medical info from his doctor and the hospital reports. All available for review. -- We took him out of the hospital after midnight on June 16 - had him spend father's day at home with the entire family, feed him baby food and diluted gatorade through a syringe - still staying in contact w/his doctor. It was clear he was happy to be home and around all of us who loved him and no more sticking with needles and all that goes with it. On Monday morning, we took him to his doctor for a final evaluation and we gave him his very last gift from us... the hardest thing in the world ever to do...	12	Years	Terrier - Yorkshire	Dog	15	Pound
EON-149931	12/3/2013 11:57	Blue Buffalo Healthy Weight	I began feeding (b) (6) (and my other dog (b) (6) Blue Buffalo Healthy Weight a few months ago. I previously fed them regular Blue Buffalo food. Once I switched them to the weight control food, they both began vomiting several times a day. They didn't vomit immediately after feeding, but rather several hours after feeding. Therefore I didn't make the connection between the food and the vomiting for a few months, so I continued feeding them the new food for several months. Last week I switched to a different food, and the vomiting stopped.	7	Years	Chihuahua	Dog	7	Pound

EON-149888	12/2/2013 17:30	waggin train jerky tenders	Owner knew she had given Waggin train treats. Stopped giving treats in February after first dog died. Has had 2 dogs previously develop urinary issues. Both were diagnosed with cancer. Now this dog has developed urinary bladder cancer. Also possible mets in lung. Seems like abnormal presentation. Bloodwork was ok 1 moth ago. Now showing sings of lethargy and bladder issues.	11	Years	Sheepdog - Shetland	Dog	30	Pound
EON-149852	12/2/2013 14:12	waggin train, Milo's Kitchen chicken jerky	Over the weekend of 11-22-13, I noticed that (b) (6) was not eating. He would eat even treats. By 11-25-13, he became very lethargic and anxious. We took him to the Vet on 11-26-13 and we noticed that he was bumping into walls and have a hard time focusing. After the examination, it was determined that he had two detached retinas due to extreme high blood pressure and possible kidney damage. We we advised to take him to a specialist to confirm. The specialist confirmed that the blood pressure was an issue for the detached retinas but stated there were some other underlying primary medical issues. After additional testing it was confirmed that the primary medical issue was kidney damage due to high levels of toxic substance from dog treats. All other medical issues were caused by the kidney damage. He is on blood pressure medicine and special renal diet food.	3	Years	Terrier - Jack Russell	Dog	12	Pound
EON-149800	12/1/2013 23:12	VitaLife Sweet Potato & Duck Twists	Vomiting, increased urination, diarrhea, increased water consumption, decreased appetite, decreased activity (she is a Siberian Husky who loves long walks and for the five days she was sick, I could barely get her to walk 5 minutes around the block). Since I quit feeding these treats to her, she is now back to her normal, vibrant self.	9	Years	Siberian Husky	Dog	70	Pound
EON-149797	12/1/2013 22:15	True Chews 100% Natural Dog Treats Premium Jerky Cuts Made with Real Chicken	She had a severe allergic reaction to something. She had welts all over her body ranging from ca. 1/4" to 1" diameter, red and swollen eyes, itching, agitation, followed by vomiting. I gave 25mg Benadryl, then 25 more, then 50 more. Finally took her to Small Animal Emergency Clinic, where she received Benadryl injection, steooid injection, anti-nausea injection, and eye drops. The symptoms began in the evening. That morning I had given her 2 pieces of chicken jerky. It was the first time she had eaten this product. The veterinarian said that could have been the cause.	9	Months	Pointing Dog - Hungarian Wire-haired (Vizsla)	Dog	55	Pound

EON-149768	12/1/2013 7:45	Mylo's Kitchen Chicken Jerky	<p>I began giving (b) (6) Mylo's Kitchen Chicken Jerky treats a couple of years ago. Sorry, but I can't pinpoint a more exact time. It took me several months to make a connection between the treats and his symptoms. He would vomit, but never immediately after being given the treats. It would be a couple of hours later. He also had very, very loose stools and rarely, diarrhea. I assumed it was the dog food at first but changing that made no difference. Once I stopped the treats his symptoms went away. However, later his urine appeared to be discolored on rare occasions. I had him use puppy pads for awhile to be sure and noticed that the urine was sometimes tinged brownish. That also seemed to clear up. Recently he has begun urinating bright red blood. I am planning to take him in to the vet soon and wondered if I should ask the vet to send you info/samples. Neco is very precious to me but I'm disabled and living on next to nothing. So, going to the vet is something I avoid if possible. It just never occurred to me that he could've been poisoned by the treats until I read about it. By then, I had long since stopped giving him those treats.</p> <p>The next section asks for the date that the problem started. As I said, I don't remember. So, please ignore the info I entered there. There isn't an option to type in "unknown".</p>	7	Years	Spitz - Dutch (Keeshond)	Dog	45	Pound

EON-149715	11/29/2013 15:45	Cadet Gourmet Duck Breast	<p>We bought our first pouch of Cadet Duck Jerky Treats for (b) (6) on 3/14/13. After frequent vomitting, we were instructed by the vet to give him Pepcid daily with no positive results. We brought (b) (6) to the vet for chronic vomitting on 4/16/13. Tested positive for lyme disease and given medication. During a phone call to the vet on 5/1/13, we expressed concern that the lyme disease medication increased vomiting. Discussed triple therapy for vomiting. Not making any connections with the treats, we purchased a second bag of the jerky treats on 5/8/13. Called vet again on 5/14/13 with news that the therapy was working. Ended therapy but remained on Pepcid. Vomiting was still intermittent but not nearly as frequent as before treatment. Still not making the connection, we bought another bag of jerky treats on 6/20/13. On 7/17/13, brought (b) (6) back to the vet. He was now having issues standing up, and need help to boost his rear end to help him stand. Pain meds did not help. Vomiting was increasing again, and (b) (6) had urges to eat potted plants and fake straw. Given Metacam for arthritis and continue Pepcid. By 8/2/13 excellent response to Metacam, but still had an upset stomach and needed the Pepcid. Bought another bag of jerky treats on 8/29/13. Continued Metacam and Pepcid until mid-October. (b) (6) vomiting was increasing again and progressively had more trouble walking. On (b) (6), we brought him back to the vet since he had stopped eating for 3 days, and he was very weak. Vet observed "fullness" in abdomen and dehydration. Treated for the dehydration and given penicillin and Cerenia for vomiting. Discontinued Metacam. (b) (6) stopped vomiting and began drinking water but still would not eat. Still weak and getting weaker each day.</p> <p>Returned to vet on (b) (6), needed to be carried. Vet observed blackness on thermometer indicating internal bleeding, and bruising focal area on midline groin area. Expressed concern of neoplasia or gi ulcer, but to diagnose recommended radiographs and bloodwork. We declined and elected euthanasia.</p>	12	Years	Pit Bull	Dog	75	Pound

EON-149478	11/27/2013 13:42	Kingdom Pets Duck and Sweet Potatoe	<p>November 15, 2013</p> <p>W. Craig Jelinek President and CEO Costco Wholesale Post Office Box 34331 Seattle, Washington</p> <p>Re: Membership ID # 111781505917 (b) (6)</p> <p>Hi, my name is (b) (6) and I am an 8 year old Doberman-pincher. I'm pretty spoiled because my family loves me a lot and everyone gives me a lot of attention. I should also mention that I am irresistibly cute, which doesn't hurt.</p> <p>One Saturday afternoon I gave my family a serious scare. I thought I was going to die. I was bleeding from my rectum; I was salivating profusely and could not get enough to drink. As soon as my Mom noticed that I was bleeding, she called my vet. (b) (6)</p> <p>(b) (6) They told her to immediately bring me to the (b) (6). Within minutes, they whisked me into the front of my Dad's pickup truck and off we went. I was bleeding so badly throughout the 20 minute drive, I covered my Mom's and my sister's legs and shoes with blood. I just could not stop.</p> <p>When we arrived at the animal hospital, they would not let us stay in the waiting room as I was still bleeding. We had to wait outside until a room was available for us to wait in to see a doctor. We waited and waited and</p>	8	Years		Other	100	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>finally the doctor came in. After a brief exam and some questions, the doctor explained that they would need to admit me and hook me up to an IV and run some tests to figure out what is going on. I was pretty upset and felt quite bad. My family left me there. I didn't know if I would ever see them again, that's how sick I was. I'm pretty sure they were thinking the same.</p> <p>Saturday turns into Sunday and Sunday turns into Monday. I am finally starting to feel better. Thank God, maybe I can see my family soon and go home.</p> <p>My name is (b) (6) . I am (b) (6) (I call him (b) (6) Mom. We got him from a breeder at 7 weeks old. We waited for him to be born. He is a great dog. He only eats Science Diet dog food and Peanut Butter all natural treats from Petco. He does not eat table food and he has never eaten anything but what I have just stated. He weighed approximately 110 lbs. before getting sick.</p> <p>On September 13, 2013, I went to Costco to pick up some groceries. As you can see from our card activity, I and my husband are frequent Costco shoppers and have been for many years. We do a great deal of shopping at Costco, for gas, tires, contact lenses, TVs, just about most items you sell. Although not normal practice for me, I saw what appeared to be a new item for dogs that looked like it was healthy. It was Duck and Sweet Potatoe Treats by Kingdom Pets. From the descriptions on the package, I thought these would be a nice alternative to his peanut butter treats. I purchased a large bag of these for \$12.49.</p> <p>I did not give (b) (6) these new treats until a few days after my purchase. I only gave him a few at a time (three or four) once per day starting on Wednesday or Thursday (9/18/13 or 9/19/13). I have what is left from the</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>wednesday or Thursday (9.10.10 or 9.19.10). I have what is left from the bag so you can see from it that he did not have many treats at all. He had less than 20 in this two or three day period prior to being admitted to the hospital.</p> <p>I can't describe how upset we were. The doctors were great and kept calling every several hours to provide us with updates as to his progress. We honestly did not know if we would ever be picking him up as neither of us has ever seen an animal so ill.</p> <p>When they took x-rays, they could see a great deal of swelling of his stomach and intestines. They could only offer that he must have eaten something to disrupt his digestive system and serious enough to cause the severe bleeding.</p> <p>They put him on fluids, antibiotics, as well as several other medications that I cannot pronounce. See details attached. We finally were able to pick (b) (6) up from the Hospital on Monday night. We only had to provide our charge card for the hefty \$2,242.12 hospital bill. I also missed work on Tuesday as I was afraid to leave him alone as he still didn't appear to be well. He had to maintain a cooked chicken and rice only diet for four days. Once four days were completed, we could then begin to introduce his Science Diet with the Chicken and rice for the remainder of the week (7 days).</p> <p>After hearing something on the Today Show the week following the incident regarding pet treats that were killing dogs, I did some research to find out what was going on. Apparently, pet treats from China have been in the news for causing illness for years. Several treats, including Kingdom Pets, were voluntarily recalled early in 2012 because trace amounts of unapproved antibiotics were found in these treats and others listed in the attached article.</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>Imagine our surprise. If these treats were recalled last year, why on earth would Costco be selling them this year? Have the ingredients been changed? Did Costco not know that these treats could be causing this illness and possible death to animals?</p> <p>I reviewed Costco Wholesale's Mission Statement on Animal Welfare and although I think it's an honorable mission statement, I'm not quite certain it's sincere.</p> <p>In addition to the upset, concern and loss of three days of our functioning lives (my daughter, husband and myself) missing a day at work and pay, coupled with (b) (6) upset and illness, we also were facing a \$2,242.12 surprise with the hope that (b) (6) would have a full recovery. Fortunately, he did after about 2 weeks and the loss of 10 lbs.</p> <p>I am asking for some accommodations on your part. I want that item to be removed from the shelves at Costco so no other families have to go through this. I would like serious consideration made by Costco's purchasing area to ensure these types of questionable food sources (pet treats from China) aren't part of Costco's offerings to its unsuspecting customers. Lastly, I would like a reasonable offer by Costco for the pain, upset and costs that my family has been subjected to as a result of this Costco purchase.</p> <p>Lastly, I am sending a copy of this document and its attachments to the following, in an attempt to help other families from living through the three days of hell that we just did:</p> <p>Richard A. Galanti, Executive Vice President, CFO, Costco Wholesale Dennis Knapp, Senior Vice President, Foods & Sundries Merchandising, Costco Wholesale</p>

The entire contents of the bag has developed mold. The expiration date on the bag is 03 10 2015. The bar code is 7 6830301496 3. There are two other numbers-3167 above the bar code and 238 Y below the expiration date. The bag has been kept sealed in a cabinet inside our home. The desiccant packs are still in the bag.						
EON-149436	11/26/2013 22:03	Happy Hips Chicken Breast glucosamine and chondroitin	Dog presented on 11/18/13 three day history of decreased appetite and vomiting. Owner reported feeding (b) (6) a new chicken jerky treat - Happy Hips by Dogswell, made in China, the day before the signs started. This was the first time the owner had ever offered the dog this jerky treat. On PE had painful abdomen. The dog was treated with outpatient supportive care and responded well, the owner reports the dog was back to herself 5 days after treatment initiated. Bloodwork showed no significant findings except for a mild increase in BUN/creatinine ratio. Liver and renal values were normal. A urinalysis was normal.	4.5	Years	Terrier - Yorkshire	Dog	5.3	Pound
EON-149408	11/26/2013 17:09	Wagon's chicken jerky treats	(b) (6) presented to my clinic on 1/30/13 with a 1 week history of polyuria, polydypsea, and lethargy. Labwork revealed acute renal insufficiency with tubular damage. By ruling out other possible causes and obtaining a complete history, it was determined that the likely etiology was Wagon's chicken jerky treats that were purchased at a Sam's club and manufactured in China. The dog was referred to a specialist for ICU care and recovered.	7	Years	Terrier - West Highland White	Dog	18.6	Pound

EON-149345	11/26/2013 13:27	Waggin' Train Wholesome Chicken Jerky Tenders Chicken Dog Treats	Surgical removal of affected testicle went without complications (although it was known pre-anesthetically that BUN/Creatinine was elevated). Post-op swelling was managed via antibiotics, etc. Three weeks post-op, the patient became an overt renal failure patient. Treatment was unsuccessful, and the dog died in our hospital while under care (IV fluids, antibiotics, etc.). In hind sight, the owner brought in packaging of "Waggin Train Jerky Tenders" that were fed to this dog approximately one month prior to renal disease diagnosis. It is unknown if the Jerky treats are related, but the renal failure was diagnosed within a time frame to have made it suspicious.	7	Years	Greater Swiss Mountain Dog	Dog	104	Pound
EON-149288	11/25/2013 21:51	Dads bite size meal chicken and rice flavor	The dogs were fine until they ate the new bag of dog food they were given. Two days later they were both dead. They live in a dog run and have no other interactions with any type harmful materials. The younger dog was almost dead and died within minutes. The other dog was taken to the vet and he was convinced it was a contamination of some sort. The other dog died hours later and now we are left with nothing but questions.	5	Years	Coonhound - Bluetick	Dog	65	Pound
EON-149228	11/25/2013 15:57	Dogswell Happy Hips Chicken Breast Glucosamine & Chondroitin, Dogswell Veggie Life Happy Hips with Glucosamine & Chondroitin, Dogswell Veggie Life Happy Hips for Helps Maintain Healthy Joints with Glucosamine & Chondroitin Chicken and Sweet Potato	I also have another dog that is around same age and weight, but is a mixed dog we bought from the Humane Society. The other is same weight and size and yrs. of age, but is an red Irish Setter. The mixed puppy has been throwing up a lot, yellow phlegm, a lot of her hair is falling out that is more than normal, and she has lost a lot of weight. The Irish Setter has had blood in her stools, including the other dog. They have been drinking a lot of water, excessive amounts. Not themselves. I took off treats and want a refund as the website said to call, but at this moment I have been on hold for over 25 minutes and no one has answered. The recording gives you an option to leave a message when pressing 9, but it will not let you leave a message. I am worried about my dogs. I am feeding them only dog food and stopped these treats. What should I do now?	10	Years	Setter - Irish Red	Dog	55	Pound
EON-149217	11/25/2013 15:09	There was no labelling. It was a plastic bag filled with bully sticks	I gave my dogs bully sticks purchased online through petflow.com (they had a sale on them) and both dogs spent the night vomiting. These sticks looked different than the other ones I bought at the neighborhood Petco. I tried it again a week later, and the exact same thing happened. I called them to report it and the woman got mad at me and hung up on me.			Poodle (unspecified)	Dog

EON-149036	11/24/2013 21:51	Cadet Gourmet Duck Breast	Evening of 11/11/13 I purchased a bag of Cadet Gourmet Duck Breast 2.5lbs from Costco in (b) (6) I gave her a couple treats when I got home and few more the following day. She stays in a cage when I am not home and I typically give her a treat when she gets in the cage and when I let her out. On 11/13/13 I came home, let the dog out, gave her a treat (one of the duck breast treats), and then fed her her normal food (Blue Buffalo Healthy Weight). After coming back inside after eating she was acting a little weird and puked quit a bit. She proceeded to breath fairly quickly and shallow. She also appeared to be having hard time keeping her eyes open and her nostrils were dry and flared. She generally looked fairly pitiful and not her normal self. She continued puking through the evening till about midway through the night. I took her temperature and the thermometer was reading 103.5 F. She still did not look well, so I took her to my parents who live nearby and they watched her while I was at work. She puked a couple more times (she wasn't fed after initial puking, so vomit was just small and frothy), her breathing did not improve, and she was not her normal self. I ended leaving work early and took her to vet. The vet prescribed antibiotics, tramadol, and a anti-vomiting med. The also gave her a shot of the anti-vomiting med along pocket of IV fluid under her skin. The next day blood work results came back and vet said all three of the enzymes for her pancreas where high, indicating pancreatitis. She greatly improved overnight and seemed completely back to her normal self after a day. She was fed a bland diet of rice and boiled chicken or extra lean ground beef for the next week.	5	Years	Bulldog - American	Dog	70	Pound
EON-149013	11/23/2013 23:27	Happy Hips Salmon Jerkey with Whitefish Clucosamine and Chondroitin	I fed my dog Happy Hips Salmon Jerky, one full piece at 6:15pm on (b) (6) At 9:45 am on (b) (6) he went into a convulsions and dead. He was young, in good health, and this was the only change in his diet.	7	Years	Retriever - Labrador	Dog	55	Pound
EON-148991	11/23/2013 14:30	Vitalife Duck Tenders	Our dogs are given treats 1 - 4 times a day. We were giving them Vitalife Duck Tenders. After consulting with our Vet Clinic, they suggested submitting a report to the FDA concerning these treats. Our other dog (b) (6) - report submitted) was seen by our vet on Friday (b) (6) for severe diarreha with blood in it. (b) (6) showed no sytoms. The next evening (Saturday (b) (6)) (b) (6) began to show symptoms. She would not eat or drink anything. She had diarrehea which eventually contained blood and began to puke profusely for hours, finally puking blood. Our Vet clinic was closed on Sundays so we took her to the Emergency clinic where she was kept overnight.	2	Years	Retriever (unspecified)	Dog	50	Pound

EON-148989	11/23/2013 12:39	Vitalife Duck Tenders	<p>We purchased Vitalife Duck Tenders for our dogs. We recently were made aware of the warnings issued by the FDA and discussed with our Vet if these could be the cause of our dogs illnesses.</p> <p>(b) (6) had begun to get sick earlier in the week but on Friday we decided to take her to the Vet. She started with normal diareeha but by Friday she had begun to have blood in her poop. We took her to the Vet and had her checked out. The Vet diagnosed her with abnormal bacterial population with some Clostridial bacteria which can cause diarrhea on their own or secondary to a parasitic infection. A sample was submitted to the lab. We had to feed her a bland diet and add in a probiotice to her food. She was also required to take Metronidazole. This ended up clearing up her issues. This ended up costing us almost 200 dollars.</p> <p>The next day, other other dog exhibited even worse symptoms. We have created a second report on (b) (6)</p> <p>After discussing the warnings previously given by the FDA regarding the Vitalife Duck Tenders with our Vet Clinic, they asked that we submit a report with the FDA as these products could have very easily caused these symtoms in our dogs. I have tried contacting Vitalife and have not recieved a response.</p>	4	Years	Retriever - Labrador	Dog	65	Pound

EON-148987	11/23/2013 11:39	Happy Hips Duck Breast with glucosamine & chondroitin	I have been giving my 2 dogs Happy Hips by dogswell for a couple weeks. They love them and I thought I was rewarding them with a healthy snack. I gave them 2 each in the evening. I noticed my one dog started burping very loudly. Then a few days later she would regurgitate liquid in her mouth and try to swallow it. I thought she was eating something outside that didn't agree with her stomach. I started going out in the yard with her to see if I could see what she was eating. Then a week ago other dog started doing the same thing. I was really puzzled until I read an article in our local paper. (b) (6) has an column in our (b) (6) which I always read. She wrote an article about jerky treats making dogs sick because they were made in China. I immediately logged on this website she listed in the column. I also went on the computer to research any information I could find about Dogswell Happy Hips. I was really upset reading all the information. I feed by dogs what I thought was the best food and treats I could buy. So far, my dogs do not show anyother signs or symptoms. I will watch them closely. I want to help get the warning out to other dog owners. I am hoping my dogs will be o.k. I will be watching them very closely. thank you.						
EON-148972	11/22/2013 21:42	PetnShape chicknsweet potato dog treats	My yorkie ate 3 or 4 chicken wrap sweet potato treats and within days was hospitalized with kidney failure and after 8 days in hospital there was no hope of recovery and had to put her to sleep.	7	Years	Terrier - Yorkshire	Dog	10	Pound
EON-148954	11/22/2013 17:15	AKC American Kennel Club	became ill rapid onset continuous movement of head with muscle spasm and unable to stand.back legs collapsed on attempts to stand,yelping regularly as in pain and fear vomit no appetite 72 hrs.had to give fluids per eye dropper.seizure like activity this about one month ago then two weeks ago a less severe episode with same symptoms	3	Years	Chihuahua	Dog	5	Pound

EON-148657	11/20/2013 11:51	Beniful	<p>Both of our animals are on low cost foods. The dog primarily Beneful. Once I realized the food was making the animals sick I switched to high protein no filler foods.</p> <p>Our cat was about 5 years old and we recently had to put her down last week. Sadly the dietary changes weren't soon enough for her. She had been throwing up for a few months. I thought maybe it was hairball, so I treated accordingly. About two weeks prior to her death her health declined rapidly. She was severely malnourished. Stomach was distended and intestines felt rough to the vet. The cost of texting and treatment was beyond what we could afford and the vet felt she was very ill. So we chose to put her down. The vet felt that she was a very sick cat and it was unusual for her age. The entire experience was devastating.</p> <p>We also have a Siberian Husky who was starting to get very ill. The vet was concerned his kidneys were being affected. He was getting very thin, lethargic and losing his beautiful coat. After changing his diet his health was restored as far I can can tell without testing.</p> <p>I can't help but thing the food we feed our animals is killing them. Hence why I am filing this report.</p>

EON-148630	11/19/2013 22:09	Nutro Max Natrual Nutrition Maximum Health Natural Chicken Meal & Rice Recipe Adult Mini Chunk	I purchased Nutro Adult Dry Dog Food - Mini Chunks, for my pets mid august of this year, 2013. After about a month to a month and a half I noticed one of my dogs was having issues. At first she was eating the food but then after some time she would just sit there at the bowl. I would tell her to eat and she would eat some but then she would just walk away and eat more later. After a while, it got to a point where she didn't want to eat it at all. Then, she started vomiting every now and then. That turned into every night. The same time of the night she would vomit. I STOPPED feeding her the food completely and gave her plain white rice for several days. I changed to another brand of food which has helped the vomiting but other symptoms have remained. She was drinking a lot of water, not as much now but was very lethargic, seemed like she was depressed because she would not move around much. She's been excessively using the bathroom (wanting to go out every couple of hours) and shaking like she is cold etc!! I am upset and need to know what other further actions I can take to help my sick dog and who is responsible. Thank you.	5	Years	Bichon Frise	Dog	14	Pound
EON-148624	11/19/2013 20:51	Dogswell Veggie Life Happy Hips Dog Chews Chicken & Sweet Potato	a new bag of the Dogswell happy hips treats the morning of 10/23 (approx. 7am) and gave the dog a small treat. approximately 12 hours later the dog began experiencing gastrointestinal distress in the form of soft stool and vomiting. Almost 18 hours after the treat was given, the dog was experiencing extreme diarrhea. The diarrhea continued all day. By 2 pm on 10/24 (29 hours after the treat was given) the diarrhea was bloody.	13	Years	Mixed (Dog)	Dog	34	Pound

EON-148593	11/19/2013 17:21	m.i. Happy Pet slow roasted dog snacks beef stick twist	On Monday (b) (6), (b) (6) had his normal breakfast kibble. After feeding, the owner gave him a treat that "had been around the house for a long time". It was about 12 inches long, and appeared to be a rawhide type treat. 20-30 minutes later, (b) (6) vomited and then was lethargic (not unusual behavior after vomiting for him). An hour later, the owner noticed (b) (6) was having labored breathing which quickly progressed to gasping (suspect agonal breathing). The owner tried to reach a mobile veterinarian, but (b) (6) passed away while he was on the phone. He later retrieved the package the treat came in , retained a small amount of the product (1-2gms) and refrigerated it.	11	Years	Retriever - Golden	Dog	100	Pound
EON-148578	11/19/2013 15:24	Wag-N-Tail duck jerky	Patieln developed decreased appetite with vomiting on Sunday after having been given duck jerky treats (Wag-n-tail) saturday evening and then again Sunday morning. Taken to rDVM on Monday, had Fever of 104.0, blood work revealed elevated liver values, total bilirubin and white blood cell count.	9	Years	Shepherd Dog - German	Dog	52	Kilogram
EON-148573	11/19/2013 14:27	Purina Dog Chow Complete and Balanced Total Care Nutrition	(b) (6) was fine all weekend. Monday morning she didn't get up, vomited a few times, and just laid on the floor unable to move. We called the vet for an appointment and scheduled one for Monday afternoon, but (b) (6) died just before we went to load her into the car and take her to the appointment.	11	Years	Unknown	Dog		
EON-148569	11/19/2013 14:15	Purina Dog Chow (green bag)	We purchased a new bag of Purina Dog Chow approximately 5 weeks ago. After giving it to our 2 dogs, they ate it a few times and both began just sniffing it and walking away. Neither dog would eat it. This went on for about a week before we decided to get them some different dog food. After purchasing a new brand, both dogs were given the new dog food in which one ate. The other never got his appetite back and began vomiting several times a day, drinking excessive amounts of water, and became less active. Ultimately I had to bring him into the vet where I was informed he was in total kidney failure. I had to put my dog down as he was suffering and in much pain. This happened (b) (6). During that next week 2 other dogs have died from the same exact thing, all eating Purina Dog Chow bought around the same time. I didn't consider the food until I saw this was happening to others as well, and started putting the pieces together. We still have the food but not the bag. We pour our dogfood into a tote to keep it fresh and the bag was discarded, but the other people I know still have their dog food bag.	3	Years	Retriever - Labrador	Dog	96	Pound

EON-148568	11/19/2013 14:09	Kingdom Pets -All Natural Ingredients Chicken Jerky Dog Treats	<p>I purchased Kingdom Pets Chicken Jerky (manufactured in China) treats at Costco at (b) (6). We gave our dogs (2-year-old golden retriever and 8-month-old chocolate lab) the treats this past Saturday. A few hours later, they were suffering from gastrointestinal issues. They were seemingly better by Sunday evening. We didn't make the connection to the treats until yesterday, when we gave them treats again. They again had the gastrointestinal issues, that have continued into today, along with extreme lethargy in our golden (she ingested more of the treats).</p> <p>I have spoken to both the local store and the headquarters, and both advised that they are not included in the recall. I was further advised that Costco tests their products for all microbial, chemical adulterants, and along with any unapproved antibiotic use. As I understand the recall, it is not certain what is causing the illness in dogs, so while I appreciate all Costco does in testing for the above mentioned potential issues, I am not convinced that they would be able to detect whatever it is making dogs ill from these treats. I was told to return the product for a full refund, which I will do, but I am concerned about other dogs, who may be made extremely sick by these treats. Please feel free to contact me with any questions you may have.</p>

EON-148536	11/19/2013 11:39	Kingdom Pets Wholesome Chicken Jerky	<p>During the week of November 11, 2013, I purchased one 48 oz bag of Kingdom Pets Chicken Jerky at the Costco in (b) (6) . On Friday, November 15, 2013 at about 1pm, I gave the dog exactly two of the treats. These were the first treats I gave her from the bag purchased earlier in the week. Eighteen hours later, on Saturday morning, she woke up vomiting. Since then, she has been having diarrhea with copious amounts of fresh red blood. My 3 year old, vigorous, happy, healthy (as proved by excellent bloodwork in a physical earlier in the year) hound began a lot of bleeding in her gastrointestinal tract hours after eating only two strips. I control her environment; she is not off leash, and I feed her carefully and in a monitored way. The treats produced the blood, in my opinion and observation. I've had her to the vet, and so far her blood panels are normal (three days after onset of diarrhea). We are trying to control her diarrhea, keep her hydrated, and now it is a waiting game to see if my dog develops the kidney and liver dysfunction that I have now read are killing dogs. I had not known about the chicken controversy in these products sourced in China. The Costco has known, and has not pulled the treats. I have notified my vet, the distributor, and Costco at the local and corporate levels. I have the entire remainder of the bag of treats and would like the FDA to have them for testing if desired. Please do something about this. If my dog dies, I want an autopsy and to offer her for study. I have heard other consumers say the FDA has not contacted them after a report. These products should be pulled until proven safe, not left for other dogs to consume until proven beyond a shadow of a doubt that they are killing dogs. If this was baby food, who would put up with this? Please act. Thank you.</p>	3	Years	Coonhound - Redtick	Dog	55	Pound
EON-148517	11/19/2013 10:48	dingo dental treats	<p>owner fed "dingo" dental treats to both dogs. product made in china. both dogs presented for inappetance and some vomiting. (b) (6) was icteric and had severe dental disease. both dogs normothermic. lab work for both dogs was similar. increased renal and hepatic values. owner declined hospitalization and fluid therapy. pets were placed on amoxicillin. (b) (6) died at home. the owner is seeking post-mortem exam at (b) (6). (b) (6) is at home, owner is forcing fluids. dog is still inappetant.</p>	5	Years	Chihuahua	Dog	9	Pound

EON-148499	11/19/2013 9:48	Wag-n-tails Duck tenders	she was laying on the floor and bloody diarrhea just start coming out of her and then she suddenly stood up to go more. she is totally house broke so it was a surprise that she done this. then the next day she done the same thing while my son was watching her for a little while that day. she kept going out to go all day. I ended up in the hospital that night bec of an allergic reaction to my meds and was in there for 5 days and had no idea she still had the diarrhea. my husband told me the night before I got out and I had him stop all food and treats and only give her rice I had him make for her. she slowly stopped the diarrhea and then when I cam home and she was back to formed stool, I started mixing her food in with it. then I stopped the rice and went to straight food. after a couple days of everything good, I started giving her the wag-n-tails duck tenders again first 1 a day then 2 the next day. on the second day she started with the bloody diarrhea again and started acting a little lethargic and not wanting to eat her rice again that I started again and took all dog food and duck treats away.. she nibbled on it a little at a time. took her to the vet no fever, no worms, and a full blood panel bec she wanted to be sure that her kidneys or liver wasn't affected from all of this. she put her on med for her stomach and diarrhea and special dog food and no more of the treats.	10	Months	Poodle - Standard	Dog	37	Pound
EON-148489	11/19/2013 1:27	Addiction dog food Venison	I found in the dog food one piece of blue plastic. The blue was medium color blue and perhaps 1 quarter in size, medium hardness, I could not make out it where the plastic would be from. I then looked at the kibble and there was hair and sharp bone pieces, the bag was full of them as well. This particular food is the only dry food by Addiction made in USA (all others are made in AU or NZ and are of great quality). The dog food is made by Pioneer/Great life, former Piper company. I had the EXACT same issue 2 years ago with a bag of Great life made by the same plant. Great life did not take the issue seriously and makes the Addiction dog food. Addiction took the issue seriously and sent me a replacement. I ordered the food by Amazon and complaint to them as well. I wrote a review and 2 more people so far commented having found the same issues.						
EON-148443	11/18/2013 15:48	Fancy Feast Fish and Shrimp Feast Flaked	1 hour after eating a can of Fancy Feast Fish and Shrimp Feast Flaked, Cat had violent vomiting. 4 hours later he was vomiting blood and passing frank blood from rectum. Presented next morning very weak, hypothermic, passing bloody feces, dehydrated. He was treated with IV fluids, Flagyl, Clavamox. Stool tested for Giardia and pathogenic bacteria such as Salmonella. All fecal tests negative. Blood work showed azotemia, increased liver enzymes and increased muscle enzyme (CPK). He gradually improved, was in hospital for 5 days.	9	Years	Domestic Longhair	Cat	7	Pound

EON-148347	11/17/2013 15:48	Jerky Treats (2 brands - one from China one from US) Cannot recall which specific brands.	<p>In September/October of 2012, I started feeding my two rescue dogs jerky treats. I had the animals for almost 8 years and nursed them through cancer surgeries and other ailments from neglect. They were very healthy until I started feeding them the jerky treats. The treats were originally purchased from PetSmart. (cannot remember brand but did submit receipt for refund when they were recalled). In November, both animals began to vomit and have extreme diarrhea. I immediately took them to the veterinarian and they believed the animals must have "gotten into something" because they both began with the same symptoms at the same time. We are extremely vigilant of our pets (inside dogs) and knew they had not ingested anything out of the ordinary. Shortly within this time, there was notification of a recall on jerky treats. I then realized that I had added this to their diet, but did not think they were toxic. As soon as I heard of the recall, I stopped giving the treats. Unfortunately, my animals were already in kidney failure.</p> <p>After multiple visits and hospitalizations, one of my dogs did recover. Unfortunately, my beloved (b) (6) could not recover from the kidney damage and had to be euthanized on (b) (6) at 4:10 pm. I always questioned the jerky treats as the cause of their illness, but had no proof.</p> <p>It was nine months since (b) (6) death that I decided to go to an all natural pet store and inquire about all natural jerky treats made in the United States. They assured me there had been no problems with this brand and they were all natural and 100% safe (hence the price tag of \$23 per bag). I began giving (b) (6) these "treats" (which I now know are "toxins")</p> <p>Within approximately 3 weeks, she developed the same symptoms - vomiting and diarrhea. Again, emergency veterinarian and same questions. This time, I knew immediately what had changed. She was being fed these toxic treats. I stopped the treats immediately and she did survive...barely! Thousands of dollars later but more importantly, a broken heart almost a year later, knowing I probably was the one responsible for (b) (6) death from feeding this toxic treat to my animals. Thankfully, one of them survived. This second round of near death was no coincidence. PLEASE PLEASE STOP ALLOWING THESE TO BE ON THE MARKET.</p>	14	Years	Dachshund (unspecified)	Dog	15	Pound

EON-148226	11/15/2013 11:33	Savory Prime Chicken Breast Fillets Chicken Jerky	On Oct 15th, (b) (6) developed intractable vomiting (bile, foam, no blood) as well as colitis with hematochezia and melena. There had been no recent dietary indiscretion or change in the mainstay of her diet (table foods and chicken jerky treats) but the type of dog food offered had been switched from Science Diet adult to Science Diet senior about a week prior. (b) (6) eats very little commercial dog food due to finicky appetite, and her owners quickly resort to feeding table foods as the main diet. (b) (6) had a complete diagnostic workup including CBC (elevated WBC due to neutrophilia), chemistry (low TP due to low albumin and borderline low globulins, total hypocalcemia with normal ionized, low potassium, elevated GGT, elevated ALP, and progressively elevated T bili), baseline cortisol (elevated), GI panel (low cobalamine, low folate, normal cPLI), abdominal radiographs (no evidence of obstruction), chest radiographs (normal), abdominal ultrasound (peripancreatic fibrosis), and upper and lower GI endoscopy with biopsies (showed lymphoplasmacytic and eosinophilic gastritis, enteritis, and colitis; no evidence of neoplasia or helicobacter organisms). She ultimately made a full recovery, although she had periods of hypoglycemia in the hospital (associated with fasting for the endoscopy procedure). She also had unexplained liver enzyme elevation (ALP up to 529 U/L, and T bili up to 2.9 mg/dl) and a period of hypophosphatemia which spontaneously resolved. She is being treated with steroid therapy for IBD, and on steroids she is willing to eat a hydrolyzed commercial diet well (Hills Z/D). her T bili has resolved to normal and other lab changes are resolving except for liver enzymes, on the steroids.	8	Years	Poodle - Miniature	Dog	2.72	Kilogram

EON-148208	11/15/2013 0:45	Purina Cat Chow Complete	I have been feeding my cats Purina Cat Chow Complete for a long time now and this time when I bought them a new bag a week ago they have been vomiting ever since. I withheld food from them for 12 hours as recommended by the vet and started them on a bland chicken diet and eased them back into their food. As soon as I started adding the Cat Chow in the vomiting started again. Today I bought a new bag of food, but bought Iams this time and so far they are doing fine. I strongly believe there is something wrong with that batch of food. I have written the company and await a response. My cats were only sick when I fed them that food. No diarrhea, no abnormal behavior except from one of the cats. He would constantly stay in the kitchen by his bowl and meow a lot. After the vomiting stopped and I changed their food he came back into the living room and acted normal.	7	Years	American Shorthair	Cat	12	Pound
EON-148207	11/15/2013 0:21	100% Natural Mini Chicken & Biscuits Recipe PCI Brand Chicken Tender Strips PCI Brand	(b) (6) stopped eating and having a bowel movement on (b) (6). She was also shaking. She still was drinking water, more than usual. I took (b) (6) to her vet - (b) (6) on (b) (6). He examined her and found one of her anal glands to be infected. Antibiotics were given. (b) (6) was not getting better, not eating, no bowel movement. I took her back to (b) (6) on (b) (6) (see by (b) (6)) - at which time she was given Xrays and an ultrasound to check for a what the doctor believed may be a possible blockage of a treat. I took her back to see (b) (6) on (b) (6), at which time she was admitted. Blood work was done, Xrays, ultrasound, Barium swallowing. She was on IV and kept overnight. (b) (6) had not eaten or had a bowel movement since (b) (6) (b) (6).she was deteriorating. (b) (6) called me that night with results of the bloodwork - (b) (6) was in kidney failure. I went to (b) (6) on (b) (6) and was told her bloodwork had gotten worse and her kidneys were failing. (b) (6) was still not eating and now not drinking and no bowel movement. I had to make the heartbreaking decision and (b) (6) was put to sleep on (b) (6) in (b) (6) office. During each visit, (b) (6) asked repeatedly what treats I had given (b) (6) which were the chicken tender strips and chicken and biscuit treats.	8	Years	Chihuahua	Dog	6	Pound

EON-148172	11/14/2013 15:12	Purina One Salmon & Tuna and Purina One Vibrant Maturity	<p>(copied from a letter I sent to Patrick McGinnis, Purina president & CEO)</p> <p>I am writing to you in regard to a Purina dry cat food quality issue.</p> <p>I had been a longtime supporter of Purina cat food products. For nearly ten years my cats had eaten Purina One dry food, and Fancy Feast canned food. However starting around 2011 or 2012, something changed with Purina products--the dry Purina One in particular.</p> <p>The eldest cat was becoming ill on nearly a daily basis. At first I attributed it to her age. However, then the other two cats became ill. Below is a rundown of the products and results we experienced over the last year.</p> <p>Dry cat food--Purina One Salmon & Tuna</p> <ul style="list-style-type: none">¿ Vomiting cat 1¿ Significant weight loss cat 1¿ Diarrhea cat 2 <p>Switched to ---Dry cat food---Purina One Vibrant Maturity</p> <ul style="list-style-type: none">¿ Vomiting cat 1 immediately after consuming¿ Diarrhea cat 2¿ Vomiting cat 3 immediately after consuming <p>When the third cat, normally very healthy, vomited, it alerted me that there was definitely a problem with at least that particular bag of food. I discarded the open bag of Vibrant Maturity, and opened a new bag of Vibrant Maturity.</p> <p>Live insects flew out of the bag of dry cat food.</p>	12	Years	Domestic Shorthair	Cat	10	Pound
			<p>I closed and sealed the bag, and immediately brought it to the pet food store. When they opened the bag, more live insects flew out; and the pet store representative stated this was a common problem with Purina shipments.</p> <p>The cats have since been moved to a new diet that does not include Purina One or Fancy Feast products. The vomiting, diarrhea and weight loss have ceased altogether.</p>

EON-148171	11/14/2013 14:27	Jerky Treats	On (b) (6) I fed (b) (6) Jerky treats purchased from local A to Z store. By (b) (6) he was at (b) (6) with (b) (6) about to die. He received fluids an meds an I took him home. he never got well thereafter and was euthanized. There was no hope for recovery.	7	Years	Terrier - Rat	Dog	33	Pound
EON-148125	11/14/2013 10:36	Milo's kitchen (Delmonte) Canine Carry outs	Pet was fed chicken jerky on a regular basis as a treat. (b) (6) started with anorexia and lethargy aproximatley 3 days before presentation. On presentation (b) (6), she had lost 5 lbs since her annual wellness exam in June. She was depressed; and had pale mucous membranes. blood work showed Chronic renal failure and isosthenuria, and curiously glucosuria despite normal blood glucose. I mistakenly thought the dipstick was wrong not being aware of Fanconi like syndrome. Owner elected euthanasia. Several weeks later the owner called me to express fears that the jerky treats may have caused (b) (6) CRF, after viewing a TV report about it. She no longer had the labels since she threw them away after (b) (6) died.	10	Years	Retriever - Golden	Dog	78	Pound
EON-148124	11/14/2013 10:36	Waggin Tail Jerk Treats	(b) (6) was fed 3-4 Jerky treats and with in 24 hours had begun vomiting, with in 48 hours had developed severe acute renal failure.	5	Years	Dachshund - Standard Long-haired	Dog	5	Kilogram
EON-148117	11/14/2013 9:00	Dogswell	At aprx. 6:30pm on 11-13-13 (b) (6) was given a Dogs Well chicken jerky treat. At 10pm on 11-13-13 lethargy was noted as well mild restlessness where dog couldn't get comfortable. She had massive gas and odor. She began to vomit. She vomited the contents of her stomach. She is fed her regular diet in the afternoons and has never had a vomiting episode. She is an indoor dog, UTD on all vaccines, dewormed, and in excellent health. The only thing new to her was this jerky treat. After vomiting she curled up in the bathroom on a towel. She vomited repeatedly and violently all through the night. Her last vomiting episode so far has been at 4:30AM PST and they are beginning to space out in time but only because she has no food or water being input into her stomach. She has also had diarrhea 4x since 10pm. We are fearing she might be dehydrated or be seriously injured from this treat. She will be following up with her vet.	5	Months	Pug	Dog	14	Pound
EON-148109	11/13/2013 23:45	Happy Hips Chicken Breast with glucosamine and chondroitin.	We fed (b) (6) dog (b) (6) a treat from Target called "Happy Hips" for about 3 days. The flavor was chicken breast with glucosamine and chondroitin. (b) (6) ended up getting diarrhea that had blood in it. We took him to his vet and got the necessary treatment, but we wanted to report this so that it doesn't happen to other dogs. We are happy that we have a backyard that doesn't have grass because if we did, the diarrhea would have soaked into the ground and we would have never known (b) (6) was sick.

EON-148101	11/13/2013 21:18	waggin train	unaware that the treats were harmful, we feed our fullblooded Bloodhound chicken jerky over the course of several months. He went from being completely healthy to deathly ill in a matter of weeks. (b) (6) was taken to the vet for his Kidney issues, and given meds, but within a week he had died. I am disgusted to know that these harmful treats caused my Son's dog to die at only 2 1/2 years old. something needs to be done to fix this PROBLEM!	2.5	Years	Bloodhound	Dog	95	Pound
EON-148094	11/13/2013 19:30	Wagging train duck jerky	Our dog became ill with kidney problems, she almost died. We were given an extremely poor life expectancy due to the severity of the insult to her kidneys. With excellent veterinarian care she survived and is now doing extremely well, however she will need to remain on medication and a prescription diet for the rest of her life. We will never know for certain. what caused her kidney disease but we had given her costco duck jerky for the first time that week. We can identify no other substance she was exposed to at the time her illness occurred. She had gone to a dog park and been given a raw bone that week but those were not knew occurrences for her..I was not working at the time so she was never alone the week that her illnesses occurred Her official diagnosis was idiopathic glomular nephritis. I accepted that diagnose and now continue to hear these stories of other dogs who became ill after eating jerky, it makes me cringe when I hear them. I hope that someday the issues with jerky are identified, and that pet food manufactures will not be able to advertise "made in the USA" when the ingredients are sourced from china, I would never have boughten these treats if I had looked closely at the small print and saw that detail, as we make a point of only buying products from USA or Canada. A sad mystery that we will live with forever. The vets we saw never asked if we had given her jerky	18	Months	Shepherd Dog - Australian	Dog	50	Pound

EON-148092	11/13/2013 18:21	Nutrena Professional Rabbit	<p>This is a statement of our experience with the Nutrena Naturewise rabbit food.</p> <p>Within the last 4-5 months we have lost a significant amount of our breeding and show stock, consisting of holland lop, netherland dwarf and jersey wooly.</p> <p>Our first indication that something was wrong was the refusal of the rabbits to eat, we started to notice every evening when we would feed that the dishes did not need to be filled. At first we were not worried but after three to four days and their refusing to eat still we became very concerned, it was at this point we noticed inconcistency with the feed. odd colored pellets, large pellets,clumps and webbing.</p> <p>We started losing juniors and babies right away then followed by seniors, the animals lost flesh immediately and they went down hill from there. They would not touch the pellets and had to then be hand fed, this saved a couple but in all we lost 100+ rabbits to these symptoms.</p> <p>We are still dealing with this devastating situation, we have a large number of animals out of flesh and not gaining weight no matter what we had offered them. However we did switch feed and they are now eating but have not gained weight to this point,these losses have been a significant set back and we do not expect to be back on track for six + months.</p> <p>Our rabbitry has produced locally and nationall winning stock, and we have strived for quality rabbits . But we have been unable to show and because of this have lost our postion in the national ranking of points and wins, we have also lost a very large amount of sales.And are going to have to refund deposits made on up and coming show stock, this is a situation that should not have happened.</p> <p>The very last time we spoke to Nutrena we were told there were things in the food that were not supposed to be there but we were told it was not enough to harm the rabbits, we were told this by (b) (6). There is an ingredient called TYLOSIN that we are most concerned about, which is in the hog feed which was also mixed into the rabbit feed.</p>

EON-148055	11/13/2013 14:27	Hickory Smoked Real Ham Bone For Dogs	I gave my dog the "Real Ham Bone" on Monday evening as a birthday treat. He has had them before and been fine. At 1am there were 4-5 large vomit piles with tons of bone splinters along with 2 piles of feces in my room. About 6am I find 3 more piles of bone splintered vomit. Throughout the day he becomes very lethargic and is acting sick. He is normally an extremely hyperactive dog and this is very unusual for his behavior. I find numerous piles of foamy/gel-like vomit everywhere and a few spits of blood stained mucus which came from his bottom. I notice his stomach is looking very bloated and feels rock hard and he looks pained from having to walk anywhere. At 6:30pm I offer him a small bit of dry dog food along with fresh water which he refuses and simply plops down next to the bowls, also very out of the ordinary. I call a veterinarian which days he needs to be brought in immediately. As I call him to walk out the door, he gets up and starts walking but veering left and then collapses and can't get up. He vomited the clear mucus substance again on the trip to the vet. During his initial exam, his rear end is completely soaked in blood, his temperature reads almost 10 degrees lower than normal and he is suffering from EXTREME dehydration. Upon further examination and testing, it's found that his liver/kidneys were essentially shutting down, he has a bad internal infection, glucose levels are off and a radiograph shows a large blockage in his stomach that may require surgery IF they can get his organs/vitals back up. He is currently on an IV and will remain there for at least 48 hours. As I was doing research, I found that my dog is only one of MANY who have suffered severe illness if not death from this "treat". I also found that the FDA has had this exact "treat" under investigation since last year yet nothing is being done and pets are still dying which is completely ridiculous. I want something done about these death treats and I will make sure I make that happen. Nobody should have to watch their pet fight for its life and shell out \$1200 hoping it lives.	9	Years	Terrier - Jack Russell	Dog	19	Pound

EON-148050	11/13/2013 14:06	Beefeaters Duck Wraps item #1840 lot#EFF1093	<p>I fed both my dogs a Beefeaters Duck Wrap early in the week. They were throwing up during the week but I did not make any connection to the treat. Just thought they had gotten into something in the yard.</p> <p>On 10/18/13 (b) (6) ate breakfast, and I gave her a Duck Wrapped Beefeaters rawhide, and immediately left for work. When I got home 12 hours later she was collapsed and had messed herself (clearly had not moved for many hours since her diarrhea & urine had dried all over the bed and floor). She was unable to lift her head or stand. I finally got her up and supported her to get outside. She peed (it was dark, I could not see it). She needed my help to stand & walk, was shaking, weak, crying, and very unstable. She later threw up lots and lots of material. All of the breakfast she had eaten 12+ hours earlier, and the rawhide. There was what looked like blood in her barf. She continued to throw up through the night (although only liquid came up). And she needed to go outside with diarrhea every 90 minutes all night. We went to the vet first thing the next morning. By then she was able to walk short distances (but needed to stop and rest), and was drinking and holding down water. The vet did a number of tests and could not find out what was wrong. Her white blood count was elevated a little (but not extreme), and her kidney numbers were off a little, but nothing was extreme. He changed her pain meds, gave her a shot for nausea, changed her to prescription bland food. Over the next 5 days she began to recover and seem like herself.</p>	13	Years	Shepherd Dog - German	Dog	65	Pound
EON-147970	11/13/2013 10:39	Don't recall...from Walmart. Treats in shape of bones/ white/China	I walked outside & found him dead. Prior to that, I had been giving him treats (shaped like bones but are white)from Walmart that were made in China. I kept him on a runner and where he pooped, I saw that his poop looked very tarry...I am guessing from internal bleeding. He had been drinking a lot of water prior to his death.	10	Years	Mixed (Dog)	Dog	25	Pound

EON-147968	11/13/2013 10:06	Home 360 Pet, Happy Hips Duck Breast	(b) (6) presented on 10/24/13 for a one week history of vomiting, excessive thirst and anorexia. Owners had been feeding Happy Hips duck breast and Home 360 Pet duck breast treats, otherwise no change in diet. Blood work, fecal analysis, abdominal radiographs and abdominal ultrasound were all normal. Gastroenteritis of unknown origin was suspected. She was treated with IV fluids, appetite stimulants, and anti vomiting medications for one week with no improvement in appetite. She then developed hypokalemia. Urinalysis was performed which showed normoglycemic glucosuria- typical of acquired fanconi syndrome as seen in recent jerky treat induced illnesses. Blood gas confirmed a metabolic acidosis. She was started on bicarbonate, potassium supplementations and famotidine. She is being force fed, and one month later still not eating on her own. Urine culture recently submitted due to mild elevation in renal values is pending.	9	Years	Havanese	Dog	15	Pound
EON-147967	11/13/2013 10:00	Wellness Super5Mix Complete Health Whitefish and Sweet Potato	The pet food I use, Wellness Whitefish and Sweet Potato, is shipped to my house every 3 weeks from Petflow.com. When I opened the bag from the most recent shipment, I was immediately shocked by the exceptionally strong foul odor. The smell is that of a chemical, not fish. I've used this food for over 2 years for my dogs and have never noticed this odor. I did return my July shipment due to a moldy smell, but this chemical smell was offensive. Neither of my dogs would eat the food; they actually left the room. The smell permeates my entire house. I notified Petflow and Wellness. A replacement bag was eventually sent and Wellness offered to test the food, but I have not yet heard back from them. However, I am very concerned that this food is unsafe.						
EON-147966	11/13/2013 9:42	Wholesome Duck and sweet potato	I gave my dogs the treats and shortly after my dog (b) (6) started drinking alot and then urinating on the floor when she had never done that before. Then she got really lethargic and days later was dead.	11	Years	Poodle - Medium size	Dog	15	Pound

EON-147948	11/12/2013 18:51	Beggin' Strips, Canine Carry-Outs	My dog began acting weird a few days before her death. She was a dog who LOVED to eat, and she barely ate/ didn't eat for about 4 days before her death. She threw up a few times the food that she had eaten. She was a very energetic dog who began to just lay around, and it was very difficult to get her to move/ do anything even like going outside to go to the bathroom. She unfortunately died shortly before her visit to the vet.	9	Years	Mixed (Dog)	Dog	67	Pound
EON-147944	11/12/2013 17:27	Vitality Apple and Chicken treats	in late May 2013, we noticed (b) (6) had a decreased appetite, lethargy, and was losing weight. After lab tests, it was determined that he was in kidney failure with elevated liver enzymes. We treated over the summer, but saw more weight loss, stabilization of lab values, but no improvement. He continued to decline, we got a 2nd opinion, who recommended we see an internal medicine specialist, he did an ultrasound, showing kidneys were ok, but nodular liver, noted that he had a bad odor from mouth, put on probiotics and recommended a thorough oral exam under anesthesia, to check for tumors, decayed teeth. With anesthesia, the vet noted that she couldn't open his mouth, suspected masticatory myositis, sent lab to (b) (6), test was negative, but specialist recommended treating with high doses of prednisone for 6 months. We are currently in the second month of treatment, (b) (6) is eating again and his masticatory muscles are working, but limited. We heard about the chicken Jerly and noted that Vitality brand (made in China) were something he consumed for years, so we were asked to report it to you by our vets.	9	Years	Terrier - Welsh	Dog	10	Kilogram

EON-147943	11/12/2013 16:54	Purina Lamb & Rice dry 20lb and 40lb	Began this report few weeks ago. Due to PC issues, hadn't submitted. Just found Kirkland recall again. Stopped feeding wet Kirkland food. Dog shaking head, painful whining, heart pace elevated, dry nose multiple symptoms. son changed to another brand I am on SS so will change on 3rd. Recently she cannot see and bumps into things, seems afraid of shadows and more. Aside from personal feelings, hope something can be done. Kirkland is made by Diamond with label for Costco. Son buys for me (I am disabled, can't lift). Thanks for understanding. Normally feed purina lamb and rice with can of Kirkland lamb and rice or chicken and rice. dog wouldn't eat. thought maybe got rancid in heat but store in kitchen. bought small bag. went to (b) (6) feed store bought expensive pure protein brand, still wouldn't eat. fed to chickens. two died, four birds have black, tarry poop so does dog. dog acting strange for 6 months. i said "food bad". whining, pacing and shaking head like ear ache. treated clean ears with peroxide solution just in case bug. no change. still sketchy about feed as are yard birds. searched internet 6 months ago, found site referencing issues as stated above. news anchor tonight said "report". am not filing out four more or six more forms for yard birds. this is enough. phone, mail me or email if you need further elaboration. respectfully submitted (b) (6)	2.5	Years	Doberman Pinscher	Dog	80	Pound
EON-147941	11/12/2013 16:54	Pet Shoppe Duck Jerky Premium duck dog treats	I gave my dogs each one duck jerky treat about 10:00 am on 10/08/13 and at approx 1:30 he had excessive saliva and wouldn't eat even chicken breast meat. I called the vet to take him in and couldn't be seen until 3:45. While waiting for our appointment time, my dog got worse and began throwing up lots of yellow substance that I thought to be bio. He was treated for the the vomiting with a shot as soon as we saw the vet. The vet decided we needed to do an xray first. I explained to the vet that treatment cost was a real issue at the time. He advised me that we would do the xray and go from there. He wanted to do blood work too but at that point the cost was almost \$200.00 and I just didn't have the money for blood work. He sent me home with a 4 pack of the medication Cerenia 24 mg for the nausea. My dog got better over the next couple of days. A friend had told me about the Jerky treat recall and I am 99% sure that is what did it. I never gave my dogs anymore jerky and they are both fine as of today. I returned the rest of the product to Walgreens where I bought it.	9	Years	Poodle - Medium size	Dog	13.5	Pound

EON-147939	11/12/2013 16:03	Beneful Baked Delights Quacks	<p>I rain out of my usual dog treats and replaced them with Nestle Purina Beneful Baked Delights Quacks treats on the morning of Monday, November 11, 2013. Within hours, my dog was lethargic, did not want to move, slow in movement when he did move, wouldn't eat or drink, would sit in the grass when I took him outside, and just laid around. He did not eat anything except his usual Rachel Ray Nutrish dog food the night before (not new). I called the vet and let them know, and I induced vomiting in my dog. Within hours and after sleeping, he was slowly recovering. Today - Tuesday, he is back to normal. I've switched his treats to baked treats made entirely in the USA.</p> <p>I live in (b) (6), and bought the treats at the Walmart there. I no longer have the box but I do have the treats if you would like me to send them in for testing.</p>	10	Years	Terrier - Yorkshire	Dog	17	Pound
EON-147937	11/12/2013 15:45	Boots & Barkley Rawhide Pressed Bones	We bought the bones and gave them to him and within a week he started vomiting and had explosive diarrhea. 			<p>metronidazole 375mg IV q12h, ondansetron 11.4mg IV q24h, sucralfate 1gm PO q8h, enalapril 10mg PO q24h, famotidine 10mg SQ q24h. Added metoclopramide 5mg to fluids. Patient did not urinate much since 11pm and was then given lasix 74mg IV at 5:30am. BP 223/169. Force fed patient little babyfood.</p> <p>(b) (6):</p> <p>At rDVM (daytime, prior to presentation)- BUN 97.9 (H), CREA 3.8 (H), PHOS > 15, TP 4.4 (L), ALB 1.5 (L), GLOB 2.9, K 4.2. PCV 20, TS 4.4. Continued on fluids (LRS @140ml/hr then dropped to 120ml/hr at 5:47pm due to increased skin turgor). Patient was given 18mg famotidine SQ, ondansetron 11.4mg IV, ampicillin 1150mg IV, 10mg enalapril PO, 375mg metronidazole PO.</p> <p>No coughing, sneezing, no increase in thirst or urination.</p> <p>No exposure to grapes, raisins, ethylene glycol, NSAIDs, lead. UTD on vaccines; not vaccinated against leptospirosis.</p> <p>MEDICATIONS:</p> <p>Trifexis monthly. Never has seen any fleas/ticks on patient per owner. DIET: Previously was on nutro dog food. In June, switched to a senior dog food mixed with brown rice. Patient lost approximately 10 lbs since then, but that was the intention with the new diet.</p> <p>ADDENDUM:</p> <p>Owner reports that around the time of onset of clinical signs, (b) (6) was only eating only Waggin' Train jerky treats.</p> <p>Patient was further treated at (b) (6) for acute kidney injury. Diagnostics showed severe anemia and low platelet count, severely elevated kidney values, severe protein in the urine. (b) (6) was also Lyme positive but is originally from the northeast (lived in (b) (6)) so unsure about exposure vs. active infection. During his stay in ICU (b) (6) was managed on Unasyn (50mg/kg IV q 8) to treat a systemic</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			(b) (6) was managed on Unasyn (50mg/kg IV q 8) to treat a systemic infection causing his relative fever, enrofloxacin (5mg/kg IV q 24) to treat his pyuria, doxycycline (5mg/kg IV q 12) to treat his potential lyme disease, pantoprazole (1mg/kg IV q 24) to reduce vomiting and nausea, ondansetron (0.5mg/kg IV q 12) to prevent uremic ulcer formation, methadone (0.2mg/kg IV q6) for pain management, amlodipine (0.5mg/kg PO q 24) to manage his hypertension secondary to his AKI, sucralfate (1g + 3mL H2O PO q 8) to treat his GI bleeding secondary to his thrombocytopenia and thrombocytopathy/AT-III loss secondary to AKI, maropitant (1mg/kg IV q 24) for anti-emesis, LRS (40mL/hr IV) as initial fluid therapy, D5W (60mL/hr IV) to replace his free water loss causing hypernatremia, Na-bicarb (60mL/hr at 0.14 mEq/mL) to replace his renal bicarb loss, and Vetstarch (0.5 mL/kg/hr IV) to maintain his intravascular fluid volume. (b) (6) was also given a fresh blood transfusion on 10/18, which elevated his PCV from 14% to 24% before it slowly decreased down to 19%. (b) (6) became anuric on 10/19 with weight gain and multiple furosemide doses (1mg/kg IV) were given to promote diuresis. (b) (6) possible immune-mediated glomerular disease was treated with Solumedrol (5mg/kg IV q 24) and Mycophenolate (5mg/kg IV q 12 increased to 10mg/kg IV q 12). Despite medical management (b) (6) continued to decline with rising renal values (Cr 7.7, BUN 152), worsening subcutaneous edema, continued anuria to oliguria, and decreasing mentation. Dialysis was recommended to owner but was declined and ultimately elected to pursue humane euthanasia due to quality of life concerns.						
EON-147889	11/12/2013 11:00	Friskies Party Mix Picnic Crunch	Cat ate the treats. Approximately an hour later began to have dysentery. EON-147886	11/12/2013 10:33	Waggin Train Wholesome Big Blast Pork SKin Twists with Chicken Liver Center	(b) (6) came in for routine bloodwork for the NSAIDS, it was noted that he had lost some weight. The initial CBC/CHEM showed Leukocytosis, Neutrophilia. He was afebrile and not eating well. He was put on Ciprofloxacin 500 mg BID for 14 days. 10 days later he was still not eating well and had developed diarrhea, his white count was down but still was elevated. A fecal float was negative. He was continued on Ciprofloxacin 500 mg BIB for 14 more days. Two weeks later he was unchanged, his white count had increased again. Abdominal rads showed spondylosis at L4-5, L1-2, L2-3. He had some abdominal pain. We rechecked his AMylase and Lipase and they were still normal. We tried him on Torbugesic, which did not help. A few days later, we ran a U/A he had Bllirubin +++, His liver numbers e=were slightly increased (ALT and AST). His Bllirubin in his blood was NSF. We started him on Flagyl 1000mg SID. A liver U/S showed that is was slightly small, the mesenteric LN were increased in size and it was thought that his primary problem was enteritis. A Fecal PCR for pathogens showed negative for Salmonella, Cryposporidium, C Perfringens, Coronavirus, Parvovirus, Dlstemper, Campylobacter. The owner elected euthanasia, without an autopsy.	12	Years	Pit Bull	Dog	79	Pound

EON-147854	11/11/2013 13:14	Ruffin' It Wag-N-Tails Duck Tenders: homestyle treats for dogs	<p>I relocated from (b) (6) to (b) (6) and purchased Wag-n-tail jerky treats at CVS in a pinch to save time and money . . . fed one treat a day June, July, and August . . . one day, while at work, my mom cut up 3 treats at once and fed them to my dog . . . 10-12 hrs. later, he threw up most of the treats un/partially digested with orange fluid . . . he continued to vomit foam and sticky mucus for the next day and a half (I thought he had a stomach bug, and it was Labor Day weekend) . . . I finally took him to the emergency hospital when he couldn't urinate or stand . . . the emergency vet kept him overnight for renal failure (BUN = 150 (normal = 18-28), Creatinine = 80 (normal = .1-.9) . . . close to death) . . . the antibiotics had no effect, and the emergency vet referred me to the (b) (6)</p> <p>(1hr. from our home). We drove down on Labor Day to consult with (b) (6). After a sonogram determined he was a good candidate for veterinary dialysis (the only machine in the state of (b) (6) was at this facility), we agreed to the minimum-\$10,000 treatment. He spent three days on the machine and 9-12 medications to stabilize his kidneys; however, the toxin from the treats had spread to his liver, as well (Billirubins = 40 (normal = .5-.8)) we spent 13 days total fighting BUN, Creatinine, Billirubins, and ins-and-out levels (@\$1500 per day plus medications, supplies, and IV fluids . . . not to mention catheter and feeding tube surgeries) . . . needless to say, I was an emotional wreck, had to postpone all of my freelance opportunities, borrowed \$20K from my father for the treatment(s), and lived at the pet hospital for two weeks (driving back and forth 1hr. each way). After being released from the hospital, (b) (6) was sent home with a feeding tube, homeopathic food recipe, IV sub-fluids, and 9 medications . . . I was his bedside nurse for 6 more weeks (still unable to take work due to 25% chance of relapse) . . . Today, he has had three 100% normal blood panels over a 6 week period - amazing news, considering he was given a 50% chance of survival. That said, I don't want this happening to anyone else. (b) (6) is my son, and this event forever changed our lives. It would be, of course, very helpful if a class-action lawsuit was filed to pay for our medical expenses and emotional damage/career opportunities lost . . .</p> <p>Thank you for taking action.</p>	4.75	Years	Dachshund - Standard Long-haired	Dog	11.7	Pound

EON-147853	11/11/2013 13:14	Kingdom Pets wholesome Duck & Sweet Potato	On Sept. 9th Bought Kingdom pets Duck and Sweet Potato treats from Costco in (b) (6) ... Both dogs became lethargic and vomiting often for weeks. It took us awhile to get to their vet due to scheduling. Our big dog seemed to overcome the sickness, the beagle didn't. The vet ((b) (6)), did blood test on the beagle, his kidney levels were very high. We opt to do sub q IV at home since my husband is an EMT; we did this for 10 days straight, then every other day. In about 3weeks we went back for another blood test on the beagle, his kidney levels didn't go down. We choose to do some more IV treatments for a few more weeks until it was obvious we had to put him down. He was put to sleep (b) (6), in (b) (6) due to our vet couldn't schedule us that day. Item number is 661192, bar code is 8471300155. Lot no is wpkpdsp03156 or r176a(?)64c not sure which one, exp 12-24-2014 product made in china distributed by a Newport Beach, CA company. EON-147851	11/11/2013 13:14	Waggin' Train Chicken Jerky Dog Treats	<p>This email is in response to an article that I saw in the paper requesting the public's health in solving the mystery surrounding the poisonous chicken jerky dog treats. The following is entirely based on my own experience and I have no formal scientific background. This is a summary of what happened. I do not authorize anything in here to be publicly disseminated and nothing herein constitutes a waiver of any privacy rights that I have in my medical records.</p> <p>Back in early 2012, my dog, (b) (6) a twenty-five pound spayed beagle of approximately 12 years, almost died of a mysterious illness that was never definitively diagnosed, despite the fact that she was hospitalized at the (b) (6) for several days. Her diagnosis was complicated by the fact that she has had (since we adopted her) positive titers for tick borne illnesses. (She was, in fact, covered with ticks when she was found.) One of the most disturbing characteristics of her condition at the time she fell ill was that her white blood cells were almost entirely destroyed. She was lucky to have survived.</p> <p>At the time of her illness and even for some time afterward, we were not aware that chicken jerky was a problem. We had fed the treat to our seven dogs for several years without incident. The night before (b) (6) took ill, I had fed her two jerky treats from a brand new bag of Waggin' Train treats that we purchased at Sam's Wholesale Club in (b) (6) Upon opening the bag, the air from the bag escaped and I breathed in some of it. I was immediately overcome with complete exhaustion and an excruciating headache.</p> <p>At the time, I did not make the causal connection between the two, but I have come to believe that whatever poisoned (b) (6) also poisoned me. I believe that it was the fine, somewhat crystalline, almost talc-like white</p>	12	Years	Beagle	Dog	25	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>powder that dusted some of the chicken treats. I believe that I breathed it in when I opened the bag. I also handled numerous treats and that whatever poison there was on them may have passed through my skin. (I never ingested or tasted any chicken jerky and I am a conscientious hand washer before and after handling any food product).</p> <p>After this incident with (b) (6) I had sleep and cognitive disruption and horrible headaches, in addition to an array of other symptoms, such as easy bruising, excessive bleeding, tooth pain, hair loss, pain in my hands and feet and tremors. To the extent they were observable, I noticed a lot of these same symptoms in (b) (6) Additionally, her affect which was always bright and sunny was darkened, as was my mood. When we stopped feeding the treats (after becoming informed of their danger), I also noticed that the energy levels and affects of all of my other dogs improved and that some of their stools (which had been loose) firmed up.</p> <p>As I believed (b) (6) and I had both suffered from the same thing, I read everything I could about potential toxins. I concluded that whatever it was, was some sort of neurotoxin. From what I read, the symptoms I experienced most closely matched that of arsenic or organophosphate. I ultimately sought medical attention and was tested for arsenic poisoning. The hair test revealed a low, but measurable level in my hair. My urine test was clear. The only abnormality in my blood work was the clotting test which was outside the normal range. (It subsequently tested normal.) Consequently, I did not receive any treatment. Slowly, over time, most of the symptoms have greatly improved or abated. We did do a blood test for heavy metals on (b) (6) but it was months after her hospitalization and it showed nothing. We also tested our water for heavy metals. That test also showed nothing. We also tried, with the help of a private lab, to test a different bag of chicken jerky treats (bought at about the same time) for arsenic but this also showed nothing</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>arsenic, but this also showed nothing.</p> <p>The thing that ultimately convinced me that it was the powder that dusted the dog jerky was that several months later, I was given a bag of candy ginger chews wrapped in little white plastic wraps that came from China (they had Chinese characters and the mark of some import/export company on them). I ate one of them and noticed that they had a similar powder on them. Within twenty-four hours of eating it, I had an intense recurrence of the symptoms I had previously. It was at that point that I made the connection. Unfortunately, I disposed of the candy.</p> <p>I hope that you can figure out what it is because, based on my experience, it could very easily kill, not just a dog, but a child.</p> <p>(b) (6)</p>

EON-147850	11/11/2013 13:14	kingdom Pets Jerky treats	<p>She had been feeding this kingdom pets jerky treat made in china bought at costco for awhile and then all the sudden she had problems with standing, eating, lethargic, balance it was awful last about 3 weeks and she died. The first question the vet asked her was what kinda of treat that she was feeding her dogs and she said I just bought some more its in the car brought it in and the vet said she can't say for sure but these treats have been making dogs sick and and some dogs have died. (b) (6) had all the symptoms that has been reported that happen to the animals.</p> <p>That being said last week went to costco and the dog treats kingdom pets jerky treats made in china are still on the shelf we have called and complained and they said they have investigated the product and it is fine. Why is it then everywhere it is saying that it is being recalled and they are still selling and it could be killing or making more dogs sick. Please investigate this issue and let them know our pets don't have a voice and we have to stop killing them and making them sick and to remove this product from the shelf before we loose more. Just the fact that it is kingdom pets jerky treats made in china should be enough fr anybody at this time to remove a product like that or their reputation is on the line.</p> <p>Thanks for your time.</p>	6	Years	Pinscher - Miniature	Dog	7	Pound

EON-147849	11/11/2013 13:13	Waggin Train Jerky/Yams, Canyon Creek Ranch Chicken Tenders, Hartz Oinkies Chicken, Pur Luv Healthy Support Natural Treats for Adult Dogs	<p>My name is (b) (6) and I am an undergraduate at (b) (6). I have a 4-year-old dog named (b) (6) a Husky mix, who has been affected by the contaminated dog treats that have now been in the news for a while. I first purchased the Waggin Train, Hartz Oinkies, and Canyon Creek Ranch dog treats at a local dollar store named (b) (6) sometime in late 2010. As a frugal college student, I frequently shop at (b) (6) and was surprised when I saw these healthy looking dog treats whose listed ingredients were chicken or chicken wrapped yams.</p> <p>I was semi-suspicious of them showing up at (b) (6), but I did some quick research at the time and didn't notice any recalls or related matters online so I was happy to give them to (b) (6). He loved them and they became a regular treat that I would pick up at (b) (6) every week or two. While there's no way I can recall how many bags of these kinds of treats he ate, I purchased a couple bags of these treats and others whenever they would show up at (b) (6) for about 2 years. Some of the first symptoms I can remember that showed up were in late 2010 when (b) (6) suddenly started acting really stiff and confused to the point where he literally tipped over and scared me enough to take him to the vet. Some tests were done but nothing showed up and (b) (6) seemed okay so I tried to dismiss it. While I can recall several times of (b) (6) acting weird while he was on these dog treats and taking him to the vet twice, he seemed to be okay after resting.</p> <p>However, (b) (6) more severe symptoms started in 2011 when he started sporadically dripping blood from his phallus (penis). I almost had a panic attack when I first attributed the drops I found to (b) (6) phallus and immediately rushed him to the vet, even though I had no money and had to make several calls to pay for it. The veterinarian conducted a heartworm test, which was negative, and a white blood cell count which appeared</p>	4	Years	Mixed (Dog)	Dog	50	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>slightly elevated. She prescribed him some \$90 antibiotics and told me to come back to run more tests in a week. The veterinarian visit was well over \$250 and I could not afford to take him to another veterinarian in the USA.</p> <p>My hometown is a border town in (b) (6) and I took (b) (6) to the veterinarian in (b) (6) the next time I went home. (b) (6) tested negative for several tick/flea/heartworm tests so the veterinarian put him on broad-spectrum antibiotics for about 10 days. (b) (6) bleeding did stop while he was on antibiotics, but it returned only a few weeks later.</p> <p>I put (b) (6) back on antibiotics several times for well over a year, but they would only stop the infection temporarily and would eventually return. He also got an x-ray that showed a mass near his bladder, which veterinarians attributed to a stone or tumor. I was told he needed surgery to remove it, but I couldn't find a veterinarian that would operate him in (b) (6) or an affordable one in the US.</p> <p>Although (b) (6) still suffers from the bleeding, I am fortunate enough to have come across some cranberry dietary supplements that have really helped control his bleeding problem. I found the cranberry supplements on Amazon and decided to give them a try since getting him on antibiotics wasn't solving anything. I started sprinkling a couple of spoonfuls in his food in September and have been amazed to find the bleeding (mostly) stop. I say mostly because there have been a handful of times where I find a drop of blood on my sheets or the floor, but nothing compared to all day, every day the past two years.</p> <p>Although I never kept any of the Waggin' Train, Hartz Oinkies, or Canyon Creek Ranch treats, I want to share that there are other dog treats that I regularly purchased at (b) (6) and which I am suspicious of. These include 'Pur Luv Healthy Support' dog treats made by Sergeant's Pet</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>include ¿Pur Luv Healthy Support¿ dog treats made by Sergeant¿s , ¿¿ Care Products, Inc. I have an unopened bag of these treats that you are welcome to have to test, as I want to do my part in preventing this kind of tragedy or worse happening to another pet somewhere. I am convinced that these messed up distributors are dumping their toxic products on (b) (6) (and possibly other dollar/discount stores) and hurting even more pets.</p> <p>Thank you for taking action and trying to solve and prevent future outbreaks for both people and pets.</p> <p>(b) (6)</p>						
EON-147848	11/11/2013 13:13	Purina Friskies Turkey & Giblets Dinner Classic Pate	I opened a can of Friskies Turkey & Giblets Dinner Classic Pate and fed a small amount to the cat. I place the remainder in the refrigerator. The next day I took it out and spooned some into a glass bowl and placed it in the microwave. Upon turning on the microwave the food immediatly began sparking as if I had left the spoon or something metal in it. I removed it and took a 2nd sample in a glass bowl and tried to microwave it, the result is the same. The can was opened with a 'safety' type opener so there were no metal shavings from the lid. The metal must have been in the food. I trashed the rest of the food.

EON-147846	11/11/2013 13:13	Milo's kitchen chicken jerky	My dog got sick after feeding him Milo's kitchen chicken jerky and had to take him to the vet and treated for Acute pancreatitis I had call the manufacturers of the product and they denied that there was a problem						
EON-147844	11/11/2013 13:13	chicken jerky treats	I am suggesting as a passible causative agent in China-made jerky treats. Do we know how ancillary (and primary) animals were slaughtered for primary and by product inclusion to the product? If the animals were killed using any gas or gas byproduct, this can in varying degrees cause illness and death depending on the amount of ambient gas that remains in food-animal tissue. If this were the case, test results will be inconclusive and variant and almost impossible to tract accurately. If gas is being used- THAT is most likely the culprit. Remember china has much different laws and regulations regarding the termination of food animals. Please consider this option. Thank you						
EON-147843	11/11/2013 13:12	Natural Value 100% all-natural treats	My little dog got very sick and didn't eat for 2 days, then had black, very loose diarrhea with a LOT of blood.						
EON-147841	11/11/2013 13:09	Waggin Train	Jerky treats were her favorite and unfortunately we gave them to her everyday as a special treat. Today we had her euthanized due to renal failure as a result of these treats, manufactured and distributed by Purina, certainly a trusted name in pet food.	12	Years	Mixed (Dog)	Dog	55	Pound
EON-147840	11/11/2013 12:48	Milo's Kitchen chicken jerky treats	Since you have not recalled Milo's Kitchen chicken jerky treats or put out enough publicity, I fed my dog these for a period of 3 months. He started having minor seizures, throwing up, and saliva attacks. Still did not know about this because you have not done your job when I took him to the vet and there were extreme levels of contaminent in his liver (liver by-product was high); the vet still does not know about these poisen treats but we will be taking (b) (6) in this week for another test. DO YOUR GOD DAMN JOB AND TAKE THESE OFF THE MARKET NOW! I want to sue somebody, and will be checking if it is possible to include FDA since you have known about this for 6 years.	3	Years	Retriever - Golden	Dog	65	Pound
EON-147839	11/11/2013 12:45	Waggon Train Chicken Jerkey Treats	(b) (6) had been fed Waggon Train Chicken Jerkey treats on a semi-regular basis for at least 2 years. About 1 small bag every 2 weeks. We started noticing that he was drinking more water and his skin was irritated. At the time it was attributed to an allergy. In the last 2 weeks or so of his life, (b) (6) stopped eating, but would still drink consistently excessive amounts of water. He started vomiting profusely (yellow bile at first then turning brown in color after a few days) and became extremely dehydrated. We took him to the vet, who immediately started IV treament and did blood work. The blood work came back showing extreme toxic poisoning. It caused (b) (6) to have kidney failure which is what ultimately caused his death.	5	Years	Shih Tzu	Dog	16	Pound

EON-147837	11/11/2013 10:27	Cadet Brand Duck Jerky	Pet was given Cadet brand Duck Jerky treats for a period of about one month. Routine labwork performed approx 2 weeks prior to his death was largely unremarkable. Pet died suddenly after a period of anorexia and vomiting. His labwork on that day revealed a mild increase in his ALT. BUN/Creatinine were normal. Purchase date: 6/8/2013 (Costco) Date first given: 9/16/2013 Date last given: 10/15/2013 UPC: 768303014963	5	Years	Corgi (unspecified)	Dog	18	Pound
EON-147836	11/10/2013 19:51	Dogswell Sweet Potato Chicken Wraps	I have two Yorkshire terriers, my 3 year old developed stomach issues and the 8 year old went into sudden kidney failure and had to be put down! The dogs were given Dogswell Sweet Potato Chicken Wraps! The treats have been pulled from the shelves time and time again. It became apparent that by looking at the bags the consistence and coloring of the treats kept varying! The darker treats I suspect are the culprit and all Dogswell treats wraps, jerky treats are still on the market. I feel that the treats killed my 8 year old and made my 3 year old sick! I am notifying you so that you can pull the product and examine the treats and maybe solve this problem before more dogs die.	8	Years	Terrier - Yorkshire	Dog	14	Pound
EON-147835	11/10/2013 19:39	Dogswell Happy HIPS Chicken Breast	Owner reports that 2-3 days ago she gave Happy Hip Chicken breast jerky that was made in China (exp. 04/03/2015). Then (b) (6) became anorexic, had episodes of vomit, and today began urinating blood. I examined him on emergency today and he was severely icteric, fast heart rate. Blood work revealed high white blood cell count, elevations in liver enzyme ALT, bilirubin. He was very anemic and had low platelets and low blood sugar. I discussed stabilization at a 24 hour facility or humane euthanasia. Due to his acute deterioration and guarded prognosis, owner elected humane euthanasia with group cremation.	5	Years	Collie - Smooth-haired	Dog	96	Pound
EON-147834	11/10/2013 18:54	Pet Pride beefhide chicken flavor basted twists for dogs	Dog was given several types of rawhide treats, which included the "Pet Pride" brand rawhide minibones and chicken flavor basted twists. [in limited amounts] He also got purina "Beggin Strips" from time to time. His main food was avo-derm duck. He became anorexic, lethargic, reluctant to move, vomited, had an accident [very rare for him] and was dead in 2 days. He was NEVER sick before. He stayed under the bed and then died. He had been eating the above treats with no problem for years. [I still have the packages, with the 'made in China' labels on 2 of them.] Poison is the only explanation that makes any sense to me.	8	Years	Bichon Frise	Dog	12	Pound

EON-147833	11/10/2013 17:27	Milk Bones Maro Snacks	I would like to report a tainted pet food product. I purchased two boxes of Milk bones MaroSnacks from Petco on (b) (6) on November 7, 2013. I gave some of the snacks to my 2 dogs and placed the open box in a Ziploc bag. Today, when I retrieved the bag, I noticed that there were meal worms crawling in the ziploc bag. How could this happen? The expiration date of the product is December 4, 2014. Can you please provide me with some information about what will happen to my dogs? I am very disappointed with this tainted food product. I have also notified PetCo and Delmonte (manufacturer) of this issue. I have requested a full refund.						
EON-147832	11/10/2013 16:36	Healthy Promise Waggin Train Pork Skin Twist	My friend (b) (6) died in (b) (6) after many horrible vet visits. I had been giving my dog treats from the maker of Waggon Trails, when he became ill and I realized the only thing possible was the treats, I stopped giving them to him and called the maker who told me they were being bought at the time to the Purina Company. They told me that to their knowledge no other dogs had become ill from the treats. BUT they sent me a check to help with some of the mounting vet bills which I accepted at that time because my baby was so ill and I would have done anything to help him. Nothing helped him, and the vets all 8 of them could not find out what was the exact cause, and I was told that to prove the dog company wrong would take thousands of dollars which I did not have. I called many people to help me but no one could assist in telling me where to turn. Now I see the FDA report and thousands of dogs have been killed like by (b) (6) (b) (6) I'm Mad, I'm sick, and I need to speak to someone so that this madness stops... I will tell you I kept the last bag of the treats I gave my poor friend. The treats themselves were thrown out by mistake but I still have the bag if it would help.	5	Years	Unknown	Dog	89	Pound

EON-147823	11/9/2013 17:21	Cadet Gourmet Duck Breast	Neighbor had given our son a bag of Cadet Gourmet Duck Breast for our dog. They were sitting on the counter. While we were out for several hours today, our dog took the bag of treats off the counter, opened the bag and consumed more than what the recommendations are for these treats (based of the piles of thrown up treats). When we came home, the ripped open bag was on the floor along with multiple piles of thrown-up treats. I immediately thought of the issue with treats from China. This product is from China. The dogs water dish was empty and upon filling it, he started drinking as if very thirsty. We will continue to monitor our dog for other signs of toxicity/poisoning.	5	Years	Siberian Husky	Dog	50	Pound
EON-147822	11/9/2013 15:35	Cadet Gourmet Sweet Potato Duck Wraps	Dog collapsed twice. Exam on (b) (6) showed moderate dental disease, scant loose stool on rectal and evidence of severe arthritis. T102.6. CBC showed hemoconcentration hct 69 wbc 3.8 80neut 9 lymphs. SMA25 showed elevated liver enzymes: alt 239 sap 265 ast 117 chol 492 trig 724 tbili 0.4 creat 1.8 mg 1.2. The dog broke with severe diar that night. The dog died on (b) (6) Antech laboratories has placed the blood tubes on hold in case additional testing is requested from the FDA.	10	Years	Collie - Bearded	Dog	50	Pound
EON-147820	11/9/2013 14:25	Merrick Grain Free Smothered Comfort	Product is Merrick canned dog food, Grain Free, smothered Comfort, Chicken. I purchase this product approximately one month ago at (b) (6) Product Best Before 02 June 2015. Lot # , best as I can read, is 13153 CL3 21669 1303, sku 2280821669 8. I found 2 large chicken bones in the can. Luckily I fished them out before I served this to my dog. Bones are 2 1/4" long each and 3/8" thick. I alerted the manufacturer on Friday, when I opened can, but have not received a reply yet.						
EON-147819	11/9/2013 14:25	Cadet Premium Gourmet Duck Breast JerkyDog Treats	Came to vet, presented with no appetite for several days, increase in thirst, acting nauseous but not vomitting and severe weight loss. (Went from 74lbs last year to 58 lbs this year.) Chest and abdominal radiographs were normal. Tested patient for leptospirosis, and he was negative. Bloodwork shows more advanced renal failure as well as liver disease. (AST 338, ALT 2445, ALKP 2083, BUN 108, Creat 4.5) The Dr recommended hospitalization and supportive care or euthanize, owner declined. Is currently taking Doxycycline and eating ok at home.	12	Years	Dalmatian	Dog	58	Pound

EON-147816	11/9/2013 14:25	Milo's Kitchen Chicken Grillers	Vomitted on a car ride on a Sat; didn't take my dog (b) (6) in the car often and attributed it to a bumpy ride. Thought ok Sun then noticed refusing treats. Finicky eater so didn't make anything of it. Then sat in the doorway rather than coming outside with me. By then I thought she just wasn't feeling well due to a "bug". Cool and drizzling outside; I was working in mud and thought she had more sense than I did. Next am, Thurs, up very early to pick up my father on the other side of (b) (6) then get to airport. Am saddened to say (b) (6) was not on my mind. She remained home with our other 3 toy poodles and my husband. In the middle of the night she died in her sleep. My husband reported appetite down but nothing else unusual. She slept in our bed and put her paws up on the bed asking to be lifted into bed that last night. She liked to be babied and did this sometimes. Again, no red flag raised but in hindsight I suspect she was weak. Three to four hours later she died peacefully in her sleep with no apparent pain or respiratory distress. She was buried in the yard. A couple of weeks later we heard the report on dog treats and dog deaths. Our other dogs are 10+ lbs in weight. Our open pet treats at that time included an almost empty bag of Milo brand chicken treat. (b) (6) had a clean bill of health at routine vet checkup in late June. Loss of appetite, decreased energy then a quiet death are consistant with end stage renal disease. Unfortunately the timeline was short and I'd attributed her symptoms to a virus which I expected to resolve over the week. We still have the Milo treats but of coursss are not giving them to our other dogs.	8	Years	Poodle - Toy	Dog	6.5	Pound

EON-147810	11/8/2013 15:34	Victor Super Premium Dog Food Professional Formula For All Life Stages	On October 17 while preparing food (Victor Professional Dog Food-lot#828132best by 8/28/14) for my 7 dogs I observed a piece of kibble with what appeared to be a metal/aluminum embedded in it. I contacted Mid America Pet Foods(2024 North Frontage Rd Mount Pleasant TX 75455) and reported the problem. They requested pictures which were sent. I was instructed to return the bag to the retailer which was done and a replacement bag was procured. Shortly after opening this bag I also discovered a similar piece of metal in the kibble. I emailed the same gentleman my concerns and returned to the retailer who offered sample bags of a different variety of Victor's. I observed a large amount of bristle type hair in this as well as in the Professional variety. The retailer contacted her distributer and the manufacture. I spoke with the plant manager who insisted the hair was an aesthetic problem not harmful and I receive the only 2 bags in existence with metal in them. They agreed to ship me direct new bags from a different lot number. I received these on 11/6/13 lot#1031131 best by 10/31/14, while preparing food on 11/7/13 I observed a small sliver of metal in a kibble. I took this to the retailer for her to view and she contacted her reps as well as the manufacture. The manufacture has stated they will not enact a recall. My concern is there must be other dogs ingesting this metal as well as my own as I can't possibly find all of it. I am taking steps to change foods however this will not remedy the problem for unaware consumers.

EON-147804	11/8/2013 14:45	Dog's Well Happy Hips Chicken Breast with Glucosamine and Chondroitin. , Milo's Kitchen Chicken Jerky	Presented on 10/20/2013 for azotemia at a different emergency clinic. On presentation patient had a two day history of progressive vomiting, lethargy, and inappetance. Azotemia BUN 92.5 (9.0-29.0), Creatinine 5.4 (0.1-1.4). Owner's elected outpatient therapy at that time with subcutaneous fluids, convenia, and maropitant, slight clinical improvement. Owners represented to our practice (VCA Veterinary Care Animal Hospital and Referral Center) that same evening after doing research on azotemia in dogs. Hospitalized on 120 mL/kg/day IV fluids. 10/21/13 Abdominal ultrasound - both kidneys had mild to moderate nonspecific changes that were considered slightly more severe than expected from an age related standpoint. Mild retroperitoneal steatitis and effusion were noted, consistent with regional inflammation. Although pyelectasia was not noted, pyelonephritis is a possibility (or any other cause for nonspecific renal inflammation). Remainder of ultrasound exam normal. 10/21/13 started therapy for possible leptospirosis unasyn 22 mg/kg Q 8 hours, doxycycline 5 mg/kg IV Q 12 hours. 10/22/13 Lepto serology submitted - negative. 10/22/13 urine culture submitted - negative. 10/22/13 in house bloodwork ALP 16 (20-150 U/L), ALT 61 (10-118 U/L), BUN 78 mg/dL (7-25 mg/dL), creatinine 4.8 mg/dL (0.3-1.4 mg/dL). 10/23/13 in house blood work ALP 155, ALT 644, BUN 70, Creatinine 4.3. Due to clinical improvement discharged on 10/23/13 with suspected diagnosis of leptospirosis or pyelonephritis pending leptospirosis serology and urine culture results on clavamox 62.5 mg PO Q 12 hours and doxycycline 50 mg/mL oral suspension 0.4 mL PO Q 12 hours. Recommended a recheck appointment with primary care vet in 5 days. Patient was seen by the primary care veterinarian on 10/25/2013 for a recheck. The patient was clinically doing well at home. In house blood work showed progressive renal azotemia and elevated liver values. ALT 1125 (10-118 U/L), BUN 115 (7-25 mg/dL), Creatinine 8.0 (0.3-1.4 mg/dL). The patient was transferred to VCA Vet Care from the primary care vet for hospitalization and continued treatment. Placed on IV plasmalyte at 180	5.5	Years	Other Canine/dog	Dog	3.7	Kilogram

EON-147791	11/8/2013 12:30	Waggin' Train Jerky Tenders Chicken Dog Treats	<p>We purchased Waggin' Train chicken jerky treats from the (b) (6) Costco on Sunday, July 1, 2012.</p> <p>On Tuesday, July 3, after eating the treats for two days, our dog, (b) (6) started having constant and uncontrollable urges to urinate. We stayed up all night taking him out to urinate. He would come back inside and immediately have to go again. I noticed, from a few times we didn't get him out in time, that his urine was a bright orange-pink color.</p> <p>Since the only change in (b) (6) diet was these treats, which he had never had before, we stopped giving them to him. His need to urinate lessened, but his appetite was diminishing. The vet told us to monitor (b) (6) and bring him in if he didn't improve.</p> <p>I returned the treats to Costco, informing them that the treats had made our dog very ill. The Costco representative stated that he was aware that the treats were making dogs ill as others had reported the same thing.</p> <p>A week later, (b) (6) still wasn't eating at all and he was vomiting. The vet advised that we take him to (b) (6) hospital for fluids and 24 hour care, which we did on Wednesday, (b) (6) (b) (6) informed us that (b) (6) kidneys were failing. Soon they notified us his liver was failing too. (b) (6) said there was nothing more they could do. In total, we spent \$3884.73 on care to save (b) (6)</p> <p>We picked (b) (6) up on Sunday (b) (6). Our vet euthanized him on Tuesday (b) (6).</p>	14	Years	Terrier - Yorkshire	Dog	10	Pound

EON-147779	11/7/2013 23:51	Lamb & Rice Jerky	I have a Silky Terrier died of kidney failure, she was very healthy two to three weeks ago she started losing appetite drinks a lot of water, last Friday we took her to the vet and diagnosed that she had kidney failure, we took her to animal emergency clinic, on Sunday the doctor tole me there is no chance she can recover and suggested us to put her to sleep, we took a very difficult decision and put her to sleep. On Tuesday my daughter send me a link about the news of "jerky treats killing pets", we realized we also gave her jerky treat, that is the reason we feel we should report it.						
EON-147778	11/7/2013 22:45	50 oz canine carry outs beef and cheese flavor dog treats	I feed the canine carry outs beef and cheese flavor to my dogs one day. Later that night they were both throwing up and for the next 2 days my dachshund could hardly walk and would not eat or drink then he started drinking a little then by the third day he was perfectly normal. Then the second time my granddaughter gave them each a treat from the same bag and the same thing is happening. They both got sick last night and today my dachshund looks the same way again.	13	Years	Dachshund - Standard Smooth-haired	Dog	15	Pound
EON-147771	11/7/2013 21:30	Vitality Duck Breast with flaxseed and vitamins	Approx. 1.5 weeks after the dogs ate the jerky treats, (b) (6) had an incident of diarrhea. He was fine the next day, but the following day had 2-3 attacks. I took him to the vet who did xrays, bloodwork, stool analysis. No obstructions, no blood abnormalities aside from some elevated levels that the vet said was consistent with colitis. That was the diagnosis. We discussed the jerky and the vet noted that the dog had ingested the jerky. Treated the dog with flagyl for 7 days and suggested a bland diet. The dog is still having some gastric upset 1.5 weeks after initial treatment. Also, the other dog had a day of diarrhea. Neither dog is prone to this condition, which is why it was cause for concern.	5	Years	Retriever - Labrador	Dog	65	Pound

EON-147769	11/7/2013 18:45	Cadet Duck Breast Treats	On (b) (6) we purchase a bag of the Cadet breast treats from Costco on arriving home we gave (b) (6) four treats, the next day I believe he was given two more, the next day he received two more on the fourth day we noticed (b) (6) was not feeling well. He was himself, very tired and wouldn't eat his normal food in the morning. After two days not getting any better we took him to a local vet. where his blood and urine was tested. The vet said we need more test but they did not have the equipment so we took (b) (6) to (b) (6) . where he began x ray MRI Cat scan and many more test. We also had to give (b) (6) a blood transfusion because his blood count was low. Even with all there help (b) (6) died at home some thirteen days after we purchased the treat from Costco. Still Costco will not take the Cadet treats off the shelf. And our dogs is dead, with no offer of any help. Please give up a hand sorting of this terrible problem we have gone through. Thank You (b) (6)	9	Years	Retriever - Golden	Dog	94	Pound

EON-147768	11/7/2013 18:42	Iams Cat Food Pro Active Health Hairball	<p>On 10/2/2013 we had purchased a new bag of food for our cat (b) (6) it was the same type and manufacturer that we have been feeding her. Within and hour of eating the food she began to throw up, we initially thought she may have a stomach bug and would feel better the next day. However, every time she ate the dry food she would throw up. She began to get lethargic and began coughing. During this time we were able to feed her tuna fish from a can and she did not get sick. On Friday 10/4/2013 I took her to our veterinarian to be checked. (b) (6) had a fever and was dehydrated rather than run expensive blood work at the time, the veterinarian and I decided to see how she would do over the weekend. (b) (6) was given an injection of an antibiotic and sub-Q fluids. She did not improve over the weekend and continued to react poorly to the food. On Saturday we removed the food completely and only fed her tuna. She did not throw up anymore after we took the food away. On Monday 10/7/2013 we returned to the veterinarian and this time blood was drawn. The test result indicated that (b) (6) was going into Kidney Failure. My vet also had Radiographs done at that time but saw nothing abnormal. He ordered an ultrasound on her kidneys which was performed the next day. The 10/5/2013 sonogram reveled that her kidneys were well formed and appeared healthy as well as her other internal organs and GI tract. Given this finding, the radiologist concluded that the reported azotemia was most likely due to an acute renal disease (inflammatory, toxic, metabolic, other) and should be interpreted in conjunction with the lab results.</p> <p>Upon discussion of any and all variables concerning our cat the only thing that was different was the new bag of food. (b) (6) is an indoor cat that has been in perfect health since we got her at 10 weeks of age. After another two weeks (b) (6) was retested for blood and urinalysis and everything went back to normal.</p>	2	Years	American Shorthair	Cat	9.7	Pound

EON-147765	11/7/2013 17:21	Priority Chicken Jerky Treats for Dogs	While on a camping trip in (b) (6), I purchased a 24 oz bag of Priority Chicken Jerky treats at the Safeway store in (b) (6). I gave the 3-4 treats per day to my dog broken up into bite sized pieces in her food. Within a few hours my dog had looser stools than normal. Within 48 hours she was vomiting any food that she ate (undigested) and had liquid stools. I stopped giving my dog the jerky treats immediately thinking that she couldn't digest them. The vomiting after meals ceased within 24 hours. Her stools returned to normal within 2 weeks of the onset of symptoms. She had one episode of bright red blood in her stool during that time. At one week's time from the onset of symptoms, we had returned home from the camping trip so I was able to make my dog's meals from scratch. I am convinced that if I had not discontinued giving her those jerky treats and/or not changed her diet, she would have been way more sick than she was. As of today, 6 weeks after the onset of symptoms, (b) (6) has no noticeable digestive symptoms. However, she is less tolerant to cold than she ever has been in the fall. She was also severely intolerant to cold during her initial digestive troubles after eating the jerky treats.	12	Years	Terrier - Bull - Staffordshire	Dog	50	Pound
EON-147764	11/7/2013 17:12	Waggon train jerky treats chicken flavor	Presented to our office, (b) (6), with bloody diarrhea and vomiting. Died within 4 hours. Bloodwork was unremarkable.	11	Years	Retriever - Labrador	Dog	54	Pound
EON-147762	11/7/2013 17:06	Canyon Creek Ranch chicken jerky	On (b) (6) I put my dog to sleep. His quality of life was poor due to kidney failure. I purchased at Petsmart, a Nestle product being Canyon Creek Ranch chicken jerky. I fed him one 12 oz. package over a week time span and 5 days later he became very ill. The death spiral had begun. The following week I received a recall notice from Petsmart but I had already fed him the "treats". His Veterinarian agrees that it is highly likely he had poisoned by the jerky.	9	Years	Pointing Dog - German Wire-haired	Dog	86	Pound

EON-147689	11/7/2013 12:27	Waggin Train Fiddlestix wrapped with chicken treats for dogs	Owner first noticed that (b) (6) was urinating more slowly (slower stream) and had to go outside more frequently or he would have accidents in the house. Owner was concerned that it did not seem normal. Recommended examination and urinalysis on 12/18/2012. Owner did not choose to followup immediately. Was examined 5/2/2013 and appeared healthy at that time other than occasional hacking cough. Seen again 7/23/2013 for a lump between eyes from a possible injury. Owner said occasional cough was still present. Prostate at that time appeared normal shape and texture, but possibly slightly enlarged for size of dog. He appeared healthy otherwise. On 10/1/2013 owner noted that he wanted to neuter (b) (6) however, sometimes seems to sputter when urinating and wondered if he was fully emptying his bladder. On 10/30/2013 scheduled for neuter surgery, but had increased liver and kidney enzymes and so surgery was postponed and additional diagnostics performed. ***Note two other dogs in household also have had elevated liver enzymes after being fed these treats.***	3.5	Years	Shih Tzu	Dog	13	Pound
EON-147688	11/7/2013 12:21	Pet Shoppe sweet potato fries	Owner noticed dog started drinking a lot of water and had increased urination for about a 1-2 week duration. Owner also noted lethargy.	7	Years	Schnauzer - Miniature	Dog	15	Pound

EON-147686	11/7/2013 12:06	Milos Chicken Jerky Treats	In May 2013 we began giving our puppy Milos chicken jerky treats as a reward for getting into the car (we have two dogs but our other dog sniffed the treat and refused to eat it), about 30 minutes into our ride our dog would vomit and then seemed to be over what ever was going on. This was repeated several times, we consulted our ve who suggested changing dog food, etc., vomiting, lethargy, lack of appetite became progressively worse until we came home to find our dog salivating heavily, drenched, lethargic and not moving, we rushed her to the vet and after several vet visits (several thousand dollars) IV fluids, special food, and many tests the vet could not find anything wrong with our dog, we went to a home made dog food diet and eliminated any other foods and she gradually got better. We eventually went back to store bought food with no issues but no longer give her treats. Vet never could ID what the problem was.	4	Months	Retriever - Golden	Dog	30	Pound

EON-147683	11/7/2013 12:00	Cadet Gourmet Duck Jerky 2.5Lb	<p>¿ Species (dog, cat) Dog</p> <p>¿ Age, weight, breed, pregnant, spayed/neutered 13 years -7 months old 31 pounds American Cocker Spaniel Not pregnant Neutered male</p> <p>¿ Previous health status of pet Very good for a 13+ year old Cocker Spaniel. He is a sweet, lovable guy. There is some loss of hearing and eyesight. He developed "skin tags" a couple of years back. And we also suspect some joint arthritis - he doesn't like long walks anymore and movement is stiff in the morning.</p> <p>¿ Any pre-existing conditions your pet has 1. He has some loss of hearing and eyesight. He has developed "dry eye" and gets 1/4 inch of Optimmune once a day. 2. Developing "skin tags". 3. We also suspect some arthritis - he doesn't like long walks anymore and movement is stiff in the morning. (Plus the Glucosamine, Chondroitin & MSM seems to help a lot)</p> <p>¿ Whether you give your pet any other foods, treats, dietary supplements or drugs 1. Food. Primary diet is 2/3 cup of Chef Michael dry dog food twice a day. Plus one Cesar once a day.</p> <p>2. Treats. (a) Milk bone dog biscuits.</p>	13.7	Years	Spaniel - Cocker American	Dog	31	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>(b) Marrow Bone puppy treats (c) Breath Busters.</p> <p>3. Drugs/Supplements a. One "Glucosamine, Chondroitin & MSM" tablet for arthritis per day b. Optimune (0.2% Cyclosporine) for dry eye (1/4" daily)</p> <p>¿ How much of the suspected product your pet normally consumes</p> <p>Approx 3 or 4 pieces each day for less than a week. (approx 0.6oz to 0.9oz per day)</p> <p>((aside - I weighed the Jerky. 20 pieces of Jerky weighed about 4.5oz.))</p> <p>¿ How much of the ¿suspect¿ product was consumed from the package?</p> <p>We gave him a total of approx 4oz out of a 2.5Lb bag/pouch - so 15 to 20 pieces over less than a week. So approx 10% of the bag- maybe.</p> <p>Within few days of opening the bag, our dog developed severe diarrhea, vomiting, irregular behavior / movements. One evening, he just kept walking and trying to have a bowel movement but nothing came out, walked more, tried again and again to poop. This went on for many hours. 3 or 4 times he tried to vomit but nothing came up. He appeared to be in severe discomfort and his stomach was distended and very firm to the touch.</p> <p>¿ How much of the product you still have</p> <p>90% of the bag - approx 2Lb-4oz of treats.</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>FYI. A new, unopened full bag (with 2.5Lbs of jerky treats) weighs approx. 2Lb-10oz. So, looks like the bag weighs 2oz. Our opened bag of treats (including the bag) now weighs 2Lb-6oz.</p> <p>¿ Clinical signs exhibited by your pet (such as vomiting, diarrhea, lethargy)</p> <p>Vomiting</p> <p>Diarrhea</p> <p>Within a week of opening the bag, our dog developed diarrhea, vomiting, irregular behavior / movements and symptoms of have severe abdominal pain and stress.</p> <p>For example, one evening, he "insisted" on going outside and he just kept walking and walking in broad circles - this is quite atypical - and trying to have a bowel movement, walked more, tried to poop, walked, etc. Wasn't his normal walk, he was half walking and half hunched over like he was trying to poop. This went on for many hours into the night. 3 or 4 times he tried to vomit.</p> <p>In addition, he appeared to be in severe discomfort and his stomach was distended and very firm to the touch.</p> <p>After several hours, then his symptoms and signs seemed to begin to slowly wear off, he started laying down for a few minutes, then a little walk and a longer rest - and finally the discomfort seemed to have passed and he eventually came inside and laid down to sleep.</p> <p>¿ How soon after consuming the product the clinical signs appeared</p>

EON-147656	11/7/2013 10:27	Milos Chicken Jerky	<p>I had been feeding my dog treats of Chicken Jerky on and off in 2012-14. I was giving him them more often prior to his getting sick in 2014. He liked chicken jerky. He started to exhibit pain in his abdomen and vomiting and diahrea. I would rub his stomach softly to help him but it concerned me. He started to lose weight and began to shake. He also threw up a lot. I brought him to the veteranarian after a month or so of this illness and the day after he started to shake without stopping and he screamed if you picked him up. I brought him to Banfield Pet Hospital in (b) (6) . Number is: (b) (6) . (b) (6) was hospitalized and had bloodwork/urilanysis testing for internal organs. They determined his liver was swollen and not functioning properly. they concluded he had a liver infection. He was treated and received medications to include Ampicillin/Clavamox, Cerenia (anit-naus.) fluids, and Adenosyl 100mg. The Adenosyl is to be used from this point on. He is currently at the vet., right now as of Nov 7, 2013 for testing of his liver/kidneys as a followup. He was put on diet of Royal Canin, first the gastrointestinal, but he lost weight..so now he's on Canin Senior food. I threw away all of the Chicken Jerkey but I do know the brand names were MILOS Chicken Jerky (Del Monte), CANYON CREEK RANCH Chicken Jerky (Nestlie Purina Petcare Co), DOGSWELL- Happy Hips-Chicken breast Dog Treats. the last bag, before he became very sick was MILOS.</p> <p>He is an indoor dog and only goes out to p/p and is on a leash. I keep an eye on him because we don't have a fence. Before the liver infection he was on a meal of Nutri -Source chicken and rice and had canned food of Mighty Dog -lamb and rice. He has been to the vet. as needed for check ups and recently teeth cleaning. I take care of my dog...and I would Never have risked giving him toxic food. I understand that these "Chicken Jerky" treats originate in China and I am pissed that this food isn't regulated and that it appeared as if it came from a plant in the U.S. I will never buy treats for my dog and tell all of my friends and family to beware. I will happily testify or assist the FDA in researching this issue. Thank you.</p>	9	Years	Terrier - Jack Russell	Dog	9	Pound
EON-147642	11/7/2013 9:06	Jerky treats	She ate some jerky treats, I noticed she started to refuse all food, even broth, throwing up and wanted to drink often. Lost a lot of weight quickly and then passed away. I loved this dog extreamly!!!	3	Years	Newfoundland	Dog	120	Pound

EON-147637	11/6/2013 23:42	Hill's Science Diet Jerky Strips with Real Beef All Natural	Approximately on the first of August, I began giving Chuy half a strip--per day--of Hill's Science Diet Jerky Strips with Real Beef. Best Before date was 10/2014. Other identifying code was: J21 1 087. On or about 08/11/13, (b) (6) became constipated which lasted a few days. Each day he had one, maybe two, bowel movements a day (down from 3-4). Each time, he strained to have a BM. On 08/26/13 I first noticed bloody stools with an acrid odor, twice in the same day. I noticed bloody stools on the following days: 08/26, 09/03, 09/09, 09/11 (also, vomit with yellow bile), 09/12, and 09/15. (b) (6) did have other BMs but I did not inspect all of them. On 08/26 I took a fecal sample to the veterinarian's office for testing: it came back negative for parasites. I don't know what else it was tested for. On 09/17/09 the doctor prescribed Flagyl Liquid 100mg/ml. Dosage: 0.5cc every 12 hours for 7 days. After 7-10 days, (b) (6) bowels were back to normal and I did not notice any blood.	18	Years	Terrier - Toy Fox	Dog	6.6	Pound
EON-147636	11/6/2013 23:12	Doctors Foster and Smith original chicken fillets, Doctors Foster and Smith veggie wraps chicken and carrot	After feeding her 1-3 jerky treats/day for two days she starting having diarrhea. Day three of diarrhea (we stopped the treats) she had blood in her stool, and day three she was vomiting, so she went to to veterinarian.	11	Years	Mixed (Dog)	Dog	50	Pound
EON-147635	11/6/2013 22:15	Kingdom Pets: All Natural Ingredients: Chicken Jerky	I started giving (b) (6) Kingdom Pets: All Natural Ingredients Chicken Jerky that I purchased at Costco in (b) (6) in May. She was given one to two a day except for one day that she got into the bag and ate less than half of the bag. She started showing signs of excessive thirst, excessive urination, her hair was falling out, and her blood sugar levels spiked, she had excessive weight loss going from 88 pounds to 73 pounds. She was very lethargic which was extremely abnormal for a previously active dog. She went blind and had liver function problems. We tested her for Cushings disease, she tested negative. Her sugar levels were very high and our vet listed her as diabetic. We started giving her insulin shots twice a day and increased the dosage several times over seven weeks as the insulin did nothing. Our vet believed she was insulin resistant and there was an underlying factor but we could not figure out what it was. (b) (6) continued to get worse and we decided the best option was to stop her suffering and we had her put to sleep.	7	Years	Retriever - Labrador	Dog	73	Pound
EON-147632	11/6/2013 21:12	Science Diet Tender Chicken Dinner Kitten chunks and gravy	Chicken and gravy dinner kitten canned wet food with expiration date 06/2015 purchased from PetCo via online order appears to be the adult version, based on my experience using both for an extended period of time. Color and texture are identical to adult version. Fed it to kitten, kitten got mild diarrhea.

EON-147631	11/6/2013 19:36	Happy Hips Jerky Strips Chicken	I opened a new bag of Happy Hips Chicken Jerky Strips and gave them to my dog in the evening, around 7 or 8 pm. She needed to go out three times during the night with diarrhea (1:30, 3:30, 5:30 am), something she never does. The next day while I was at work she had diarrhea all over one room. I cleaned that up and let her spend a decent amount of time outdoors. We had to go out for a one hour tutoring session, during which time she again had diarrhea inside. This is a dog who only has had accidents inside when she has a UTI, something we haven't seen in over 6 years. I found the information about the FDA inquiry into jerky treats and will return them to the store. She is now on a rice regimen until she has control of her bowels.	12	Years	Retriever - Labrador	Dog	75	Pound
EON-147630	11/6/2013 18:45	100% Natural - Quackers - 100% Natural Breast of Duck - PCI Brand	For about the past year or so, (b) (6) has had these odd moments which result in me taking him to the ER. Symptoms - motionless, throwing up, Diarrhea. We would come home from work and he would be scratching his underbelly area to the point he has wounded himself. Can't tell you how many medicines he has been on but it all just started happening. Both hospitals listed below have hooked him up to IVs due to significant dehydration. The last ER visit a few weeks at at (b) (6), they did an x-ray and his intestines were just filled with food. We have no idea why. He had a double ear infection as well. Here are the two hospitals that have his records under (b) (6) (b) (6) I am guessing on the time it started. The hospitals would have that information.	6	Years	Dachshund - Standard Long-haired	Dog	13	Pound

			<p>that's what we would treat it as. He didn't appear dehydrated. At the time, they had no reason to think otherwise. He was given an injection of Famotinine & Convenia. He was prescribed a suspension of Amox and Metronidazole. His symptoms cleared up in 3 or 4 days, however, he has not completely recovered.</p> <p>My initial thought was that (b) (6) was particularly sensitive to something he ate, however, when I got home, my Doberman ((b) (6)) began to have the same violent bloody diarrhea every few hours and began vomiting later that night. She was full of energy and had been completely fine until that afternoon. I called the vet on 9/20/13 to see if we needed to reassess anything since BOTH dogs were sick with the same signs and symptoms. They didn't need to see her and prescribed Metronidazole. Her diarrhea seemed to be painful as she would moan and bark during it. She was excessively drinking water and still had some energy, but she was not her usual "hyper" self. Her symptoms completely cleared up after a few doses of Metronidazole and withholding food for 24 hours.</p> <p>I can't think of a situation where they would have encountered giardia or anything waterborne, and they hadn't been around any other dogs for about a month. This leads me to suspect there may be an issue with the food. I checked to see if there were any recalls, and I called Natural Balance. The customer service rep was quite dismissive and lectured me on how sensitive dogs can be to food changes --Frustrating because I have been using this brand of dog food for about 8 years.</p> <p>I had no idea if (b) (6) was just refusing to eat his food or if he was ill. I tried several types of food between August and Sept to see if any would be successful in increasing his appetite.</p> <p>Between August and Sept 2013, both dogs had the following foods &</p>

EON-147626	11/6/2013 17:42	Kingdom Pets chicken jerky	Owner complaining of lethargy, PU/PD, and incontinence starting in 5/15/2013 which then became chronic and progressive. CBC/Chem done prior to symptoms 3/2013 all within normal limits. On 7/2013, CBC had mild eosinophilia, Chem profile had ALT 185 (12-118), Cholesterol 436 (92-324) and Urine SG 1.010, remainder of UA wnl. On 8/2/2013, started Proin 50 mg PO BID for incontinence while we continued work-up for PUPD. On 9/6/2013, owner reports incontinence only slightly improved on Proin, PUPD persisted and mild lethargy persisted - blood pressure at same visit was 148/66, MAP 101. On 10/18/13, no change in symptoms, so submitted urine cortisol:creatinine ratio (results of 15, >13 consistent with but not diagnostic for Cushings). Also, added Incurin and continued Proin for the incontinence. On 10/25/13, owner called the clinic after realizing she had been giving the recalled jerky treats from Costco for the last 6 months (which coinsides with the start of the PUPD symptoms) but had stopped within the past week. On 10/28/13, CBC - mild monocytosis, Chem panel - Cholesterol 518, Urine SG 1.014, pH 8.5, remainder of UA wnl. In the week or so since owner stopped giving the treats she has subjectively noticed a decrease in the polydipsia and says the lethargy is resolved. The treats were Kingdom Pets chicken jerky from Costco. Lot # VWKPCK03B073. They were given to the pet as a whole treat.	8	Years	Bulldog - American	Dog	64.6	Pound
EON-147622	11/6/2013 16:42	Jerky Treats Tender Strips Dog Snacks	After feeding my dog, (b) (6) a Jerky Treat purchased at Costco on 10/30 (or 10/29, I'm not sure of the exact date), my dog became extremely ill. On 10/31/13, (b) (6) began vomiting blood and had blood filled diarrhea. I took him to the vet on and he was diagnosed with Hemorrhagic Gastroenteritis. (b) (6) was treated with IV fluids, anti-vomiting medications in addition to several other medications including Metronidazole. His condition continued to worsen and was subsequently admitted to the Emergency Animal Hospital for further treatment in an effort to reduce his PCV level. (b) (6) is still in the recovery phase. Interesting to note, I have two dogs but only gave the Jerky Treat to (b) (6)	4	Years	Dachshund - Miniature	Dog	13	Pound
EON-147609	11/6/2013 16:06	Dogswell Happy Hips	After giving him Dogswell Happy Hips all natural chicken fillets he died of kidney failure. These were the ONLY dog treats he ever ate. I made his dog food at home which consisted of chicken breast, whole grain rice and vegetables. I didn't trust the store dog foods and made his food from 2006 on when there was that big dog food issue where a lot of animals died. I thought I was doing the right thing by giving him a treat that was labeled all natural and no additives!	8	Years	Chihuahua	Dog	6	Pound

EON-147607	11/6/2013 15:57	Dogswell Happy Hips (duck jerky treats)	DogsWell happy hips were purchased, (I still have a good amount of the bag and will keep it frozen in case it is needed). Pet began to have projectile vomiting, lethargic and not wanting to eat or drink. Pet was brought into work (I work at VCA) a cbc chem was performed in house (3-25-2013) . His liver valuse both ALT and ALP were both elevated. An inhouse snap CPL was performed with normal results. x-rays were performed and sent to radiologist. They were concerned about pancreatitis. A bile acids test was performed on 03/28/2013 both pre and post values were elevated. Patient was place on IV fluids denamarin amoxi and milk thistle. On 7-21/2013 pet started with the same sympotms this time he appeared to be jaundice. another cbc/chem was performed in house again both liver values were high. Patient has not gotten any more jerky treats since the last cbc/chem. A cbc/chem was rechecked on 8/19/2013 both ALP and ALT were back to normal. Please feel free to contact me with any questions. Or if you would like the bag of treats copy of bloodwork and x-rays. THank you so much hopefully this will help in some way to get these treats looked into more.	6	Years	Chihuahua	Dog	9	Pound
EON-147594	11/6/2013 15:15	Sweet Potato Jerky Treats	(b) (6) ate a sweet potato jerky treat and became violently ill a couple of hours later. He threw up blood numerous times and was very sick. We took him to the vet and he received a shot and an antibiotic. He did not eat for days. He was very lethargic. We slowly started introducing boiled chicken and rice to him. He finally got back to himself a few weeks later.	10	Years	Terrier - Yorkshire	Dog	15	Pound
EON-147592	11/6/2013 15:00	Costco lamb jerky treats	nov 2012 started having uncontrolled diarrhea. Started losing wgt. Stool sample indicated parasites and treated. Weight and loss diarrhea continued. Blood work done in Jan 2013. All neg. Wgt loss stopped but did not regain - about 25-30lb under what he had been. May 2013 - stopped eating for several days and lost more wgt. Refused kibble. Would only eat canned. More tests and xrays in Sept 2013. All neg. wgt now under 70 lbs. Dog continued to loose wgt. Began to vomit in (b) (6) and refused to eat. dog humanely destroyed in late (b) (6). Dog started being given lamb jerky treats from Costco in Nov 2012. Vet never advised us this could be an issue. EON-147576	11/6/2013 13:42	Doctors Foster and Smith Chicken Fillets dog treats	<p>I purchased Drs Fosters and Smith chicken jerky treats for dogs. I use to buy Waggin train, but there was a recall on them and even before the recall I quit purchasing them due to hearing about all the dog deaths.</p> <p>The problem with the brand Dr Fosters and Smith, chicken and duck jerky treats, is that they are Also made in CHINA. They are exactly the same chicken treat, the look and texture..it is identical. These are the same treats only being sold under another name and company. They need to be taken off the market immediately before there is a problem.</p> <p>The company in China selling this product should be in serious trouble. There should be no sales to any U.S. company and DRs Fosters and Smith should be in trouble too, because that know about the recall.</p>						
EON-147575	11/6/2013 13:42	Chicken and Duck Jerky	Dog had excessive urination, not eating, lying and not mobile. Rushed to Vet. Was very dehydrated and had high temp. Admitted to Vet hospital for 4 days. Almost died. Slow recovery for several months. We had been giving her chicken and duck jerky prior to incident from "Chuck Wagon?" manufactured in China. Heard of issue with treats from China after incident of almost losing our pet. I reported to Pet Smart, managers at several stores, where they still had the product on their shelves. They said there was nothing they could do until product was pulled by distributor. This was very upsetting as product was still sold for many months. We had no information about concerns on product from store or FDA prior, until we did our own research and discovered that this had been a reported issue to the FDA on treats from China for at least 2 years.	12	Years	Siberian Husky	Dog	60	Pound
EON-147573	11/6/2013 13:30	Dogswell Happy Hips Chicken Breast Glucosamine & Chondroitin	Dog woke me at 4:00 AM panting. I got her water and she drank about 1/2 of the bowl. Normally she only drinks about 1 or 2 laps of water. I between the panting and water intake I knew something was wrong because this was very unlike her. When I got up, I found she was very lathargic and had urinated on the floor which again was unlike her. In the past she had only wet the floor when she was sick.	7	Years	Poodle - Toy	Dog	9	Pound

EON-147540	11/6/2013 11:36	Wagon Trail Jerky Treats	<p>Our family had a new puppy and she was everything we could have asked for. She was learning to be a great hunting companion for my husband and a great proctector for our family and she loved keeping a close eye on our infant daughter at the time. She was always in great health and loved to run and play outside, as she was a yellow lab so it was her personality. We always bought her the Wagon Trail Jerky Treats. We got them at our local Walmart and she absolutely loved them. On Decemeber 11, 2012 my husband was outside shoveling with her and she was playing around in the snow just loving it. That evening we had noticed that she was limping a little so we had called the local Animal Hospital that was open 24 hours and they said they she could have just slipped while playing outside and pulled a muscle so we could give her some ASPRIN to releave the pain a bit until the muscle losened back up. My husband then ran to the store the next morning and got some CVS brand ASPRIN. We kept an eye on her throughout the day and she just wasnt herself. She just layed around the house. She would get up and go outside when we called her but she was slow moving. We had dinner plans that evening with some family and when we returned she had developed a small lump, about golf ball size, on her left hind leg. At that point my husband and I started to get concerned. Because this was about 10pm at night we decided that we would take her to her Vet as soon as they opened at 7am. We got woken up around 5:30am the morning of December 13,2012 to the sound of crashing in our kitchen/dining room area. We got up to see what was going on and (b) (6) had falling into our dining room table and was laying on the floor just looking at us. The lump that was so small a few hours earlier had turned into something that was a little larger than a softball. There was also spots around the floor that appeared to seem like she had thrown up everywhere. I layed down next to her at this point and stayed with her until the Vet((b) (6)) had opened. By this time (b) (6) couldnt even walk so my husband had to pick her up and carry</p>	1.5	Years	Retriever - Labrador	Dog	86	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>her to the truck. When at the Vet they examined her and wanted to keep her for closer observation for the next couple hours.They had given her some Vitamin K at that time. I had to go to work and shortly before 11am I got a phone call from my husband saying that the Vet had called and there appeared that there was a fluid that was in the lump and it seemed to be spreading very quickly into her Lungs and starting to affect her Heart as well. She was starting to have a hard time breathing. They didnt know, and couldnt tell us where this fluid was coming from without doing an exploritory surgery, which would cost us a minimum of \$2500. And they couldnt even guarentee us that she would come out of it ok because she was already having a hard time breathing so they didnt know how she would react to the anastesia. At that point my husband and I had to make a decision and we had to put her down. It was a painful decision for us but we are not rich people so there was no possible was we could afford that much money for a procedure that may not even work. My work at the point let me go for the rest of the day and my husband had stayed at the Vet with (b) (6) while they euthanized her. Our daughter, at the time was 3 yrs old and she was so upset and couldnt fully understand what was going on. For the entire week following this instance our daughter screamed at us, crying hystaricly saying that she "just wanted (b) (6) back!" It was such a horrific time for our family. The Vet gave us no clear answers. They couldnt tell us how this started or why it started or where it came from. Everytime we had a question all they wanted was money from us to do further research. So to them, (b) (6) wasnt part of our family, She was just money in their pockets with pissed us off. So needless to say, we never got any answers. Then about a month ago we saw the news report on the jerkey treats and I had looked further into it and it sounded like the exact thing that had happened to our puppy almost 1 year ago. We looked into the treats and they were made in China and everything too. Its very painful to re-open this horrible wound that our family had but I felt like I needed to let you know our story. We now have gotten another Labrador, but this time we looked into her background and made sure she came come a good bloodline and we also keep a VERY close eye on what ingredients are in any of her Treats and Food that we buy so hopefully we dont have the same expirience with (b) (6) as we did with (b) (6) We also decided that we would NOT be going back to the same Vet that we took (b) (6) to because they were so disrespectful for what our family was going through.</p>

EON-147503	11/6/2013 8:06	Waggin' Tails Chicken Jerky strips	In 2012 I purchased Waggin Train Chicken jerky strips. My dog LOVED these things-so I continued to use the product, repurchasing them multiple times at Walmart. Over time, I noticed she was becoming more & more lethargic, and had some days when she refused to eat. Since she liked the jerky treats so much, I gave her more in the hope she would at least have something in her stomach. She began to have issues with maintaining her balance, and had difficulty going up & down the stairs. All the symptoms were very gradual, so I assumed she was changing because she was just getting older. My fear was that the time was coming when I would have to put her down. One day, I just happened to see a headline on AOL that showed a picture of the exact treats I was giving her. The article stated that (at that time) more then 300 dogs had either become sick-or had died. I immediately threw away the entire bag, and shared the information with everyone I knew who had pets. Within a few months of discontinuing use of this product, my dog's balance issues improved. She became more active and regained her appetite. I am unsure if she will suffer any long term effects, but I can promise you that I always read the packaging of anything I purchase-if it has anything to do with China, I leave it on the shelf. I am so happy that I saw the AOL post, otherwise I may have had her euthanized unnecessarily.	11	Years	Spaniel - Cocker American	Dog	30	Pound
EON-147502	11/6/2013 7:57	Kingdom Pet Chicken Jerky	Patient was fed jerky strips and almost immediatley became febrile, lethagic, anorexic. Blood work showed elevated ALKP, USG 1.008. Full UA and MIC pending. Patient has been symptomatic for 36 hours.	2.5	Years	Mixed (Dog)	Dog	41.5	Kilogram
EON-147501	11/5/2013 23:30	Milo's	I believe that (b) (6) died because her favorite treats were Milo's treats especially chicken jerky. I heard a news report on CBS about Milo's treats on July 2012 shortly after (b) (6) died. I left a message with Milo's consumer phone number and someone did leave a message on my phone. I was so distraught about my (b) (6) dying that I went into deep depression and grief counseling. I never returned the phone message from Milo's. I know in my heart that (b) (6) died because of Milo's treats or other chicken jerky treats I'd given her!	10	Years	Chihuahua	Dog	22	Pound
EON-147500	11/5/2013 22:12	chicken jerky from COSTCO	My energetic cavalier 7 yrs. old suddenly became very lethargic and stopped eating in late Dec. 2012. Within a 2 week period she stopped eating and drinking water. In her last days she was releasing a black runny stool. An ultrasound from the vet showed a mass in her GI. Her illness progressed so quickly, by the time the vet found the mass she was too weak to undergo any kind of exploratory surgery. I had been giving my dog chicken jerky that I had purchased from Costco between 10/2011-11/2012.	7	Years	Spaniel - King Charles Cavalier	Dog	13	Pound

EON-147492	11/5/2013 20:21	Milo's Kitchen Chicken Grillers	<p>After giving (b) (6) some Milo's Kitchen Chicken Grillers treats for several weeks prior to noticing the issue (mid-October 2012), he gradually began drinking more and more water (never seemed to quench his thirst). Whenever we took him for a walk, he would urinate many times, in large quantities. Over the next 2 weeks, he even urinated on the floors inside our house. We took him to the (b) (6) 11/03/2012, when the doctor did blood tests and urine tests to diagnose the issue. The doctor even sent a urine sample to the (b) (6) for a confirmed diagnosis. The (b) (6) confirmed that (b) (6) had Fanconi Syndrome around 11/9/2012. By now (b) (6) had lost 6 lbs. The doctor then prescribed Proin (to control his urinating inside the house), and also started (b) (6) on a series of vitamin, calcium, sodium bicarbonate tablets, and hi-protein food. (b) (6) was on this twice-daily regimen for a period of 4 months before his condition began to improve. We took him to the doctor in early March for his 4-month check-up. By mid-March 2013, we received an all-clear from the doctor, and (b) (6) was a happy dog once again!</p>	8	Years	Shiba Inu	Dog	24	Pound
EON-147491	11/5/2013 19:57	milo's kitchen home-style dog treats	<p>kidneys started to shut down after being given milo's kitchen chicken grillers treats. was taken to the vet on june 6 2013, and after being given iv fluids every day she died on (b) (6). The vet stated that she had all 6 signs posted on fda's recall. The treats were bought at walmart in dec 2012. The vet also stated that , in her opinion the treats were the cause of (b) (6) death.</p>	13	Years	Pekingese	Dog	14.7	Pound

EON-147485	11/5/2013 17:45	American Kennel Club Duck Jerky	Suddenly developed the following symptoms after eating Wagon Train brand Duck Jerky treats: loss of appetite, vomiting, bloody diarrhea, increased water consumption, increased urination, and very lethargic. (b) (6) became very dehydrated and had to be treated by our vet, (b) (6) . (b) (6) has been (b) (6) vet for her entire life. I do have a copy of (b) (6) medical records. (b) (6) had to be admitted to the animal hospital and was treated with IV's and antibiotics. This was back in the early summer of this year. Several times we thought (b) (6) would not pull through, but some how she did after a period of time and over a thousand dollars for treatment. We had to feed her special food with a syringe for weeks and administer several different kinds of prescriptions. (b) (6) could not give a specific diagnosis and performed numerous tests to rule out different things. At one point, she said she had done all she could do and advised us we might need to think about putting her down or taking her to a small dog specialist in the (b) (6) area which we never did. I did advise (b) (6) that we had been giving (b) (6) the duck jerky treats, but this was apparently before all the publicity about the treats possibly being dangerous, especially the ones made in China as these were.	10	Years	Terrier - Yorkshire	Dog	4	Pound

EON-147476	11/5/2013 16:00	Kingdom Pets	I have been giving both of my Great Danes one treat (Kingdom Pets - Duck and Sweet Potato) a day after dinner for maybe five months now. My female was lethargic and drooling yesterday after she ate the treat at 6:30 PM. She is usually very high energy but just laid around. At 3:00 AM this morning she threw up. We found the sweet potato and duck meat as well as a piece of a weed. We are not sure if it was the weed or treat that made her throw up, but have heard about the current issues on the radio and wanted to report it in case it was the same issue. We bought the treats from Costco, but no longer have the original bag the treats came in. She seemed happy this morning and ate as usual. I am at work now so not sure how she is doing today.	7	Years	Great Dane	Dog	135	Pound
EON-147469	11/5/2013 15:36	American Kennel Club Duck Jerky	Acute onset decreased appetite, bloody diarrhea, halitosis. Blood work at primary care vet showed kidney disease, anemia. Leptospirosis PCR negative. Has received chicken and sweet potato jerky treats. Was given duck jerky treats (AKC brand) 1-2 weeks prior to start of clinical signs. She was referred to (b) (6) for in hospital treatment. Abdominal ultrasound showed minimal changes to the appearance of the kidneys. Kidney levels improved but did not normalize with fluid therapy. Mild to moderate proteinuria also present. Bloody stool resolved for 3 days then next bowel movement showed digested blood in stool (melena). Has shown a slow progression of the anemia.	10	Years	Shepherd (unspecified)	Dog	69	Pound

EON-147438	11/5/2013 13:45	Pupperoni Beef Jerky Dog Treats	On Wednesday (b) (6), we took a 3 mile hike. My dog was healthy, happy and energetic. On Thursday I gave her Pupperoni Jerky treat in the AM and she acted uncomfortable and lethargic. At 6:00 PM I gave her canned food (Duck, from vet for allergies) and she would not eat. I put Pupperoni sticks into her food to entice her and she ate about half of the can. That night around 10:00 she began throwing up, had diarrhea and was very uncomfortable...unable to sleep. At 4:00 AM she woke me up to go outside and upon returning seemed confused and unable to walk up the stair. I stayed up with her all night and by 6:00 AM she was too weak to walk. I took her to the vet who ran blood work and said everything but her kidney function came back normal. The vet indicated she was shocked that she could be so sick and have relatively good blood work minus elevated kidney levels. She sent us to the pet emergency hospital. There they did an ultra sound to rule out cancer, obstructions, etc. All came back negative. We were told that she was going to be fine, was dehydrated and needed to remain in the hospital for the night and we could anticipate picking her up in the AM. At 3:05 PM MST the vet called and said she went into cardiac arrest and passed away. He said it was "like her body shut down." So in less than 48 hours she went from a vibrant, healthy dog to dead. She had no major illness other than allergies that had been treated for years with a special diet. Took no medication, and when I saw the FDA recall list felt extremely angry that this had not been made known to the public sooner. I basically killed my dog out of lack of knowledge. Please do not let this happen to another pet owner.	16	Years	Spaniel - Cocker American	Dog	36	Pound

EON-147415	11/5/2013 12:42	milos kitchen chicken meatballs	when milo's kitchen first appeared on the store shelves, I bought a bag of the meatballs. when I opened them and gave her one she ate it right up and wanted another one. By the end of the night, she started crying to go outside. I let her out and it happened, she started vomiting and explosive diarrhea. It wasn't until I sat down and thought what was different throughout the day, then I remembered she ate the milos meatballs. of course I threw them out and never bought them again. now here it is, a year down (I think) and these treats are killing animals by poisoning. I was one of the lucky ones, my girl was okay, maybe she didn't eat that many, I don't know, but thank god she was okay. Unfortunately, I lost her last month to cancer, which I also believe is from dry kibble and not knowing what all went into the food	11	Years	Shepherd Dog - German	Dog	85	Pound
EON-147386	11/5/2013 11:15	Happy Hips Chicken Jerky	We gave (b) (6) "happy hips duck and chicken jerky" at a family member's home. (b) (6) reacted with diahera, vomiting, and her ears became filled with fluids. We took her to a local veterinarian who attempted (unsuccessfully) to drain her ears. They also prescribed two medications to calm her stomach. At first the medications did not work, but after three days, she became almost normal. The veterinarian also performed a sonogram on her belly area. After vet bills that exceeded \$1500.00, (b) (6) appeared well enough to travel home with us to (b) (6) We have since returned "Happy Hips products" to the pet store and purchased only items made in the USA.	8	Years	Retriever - Labrador	Dog	60	Pound
EON-147373	11/5/2013 10:57	Good 'n' Fun Triple Flavor Chews, Beefeaters Chicken Tops	Owner has been feeding treats made in China about twice weekly for the past 6 months. Precious started feeling poorly on 10/17/13. Owner noticed increase in water consumption, and decreased appetite. She became completely anorexic 10/24/13 and started vomiting bile. Owner began to see blood in her urine and she was moaning at night. She was very lethargic. She presented for initial exam on 10/31/13. She is intact but no uterine enlargement was seen with ultrasound. She did have a very large bladder stone 2.59cmx1.58cm and hematuria with increased number of transitional cells, proteinuria and S.G. 1.009. Her BUN was low at 5 and her HCT was 58%. Her owner could not afford to pursue aggressive treatment so she was started on Clavamox, Tramadol, Cerenia, Cyproheptadine, and a canned GI low fat diet. She has improved and is eating without vomiting now, and there is no longer blood in her urine however she is urinating frequent small amounts.	5	Years	Schnauzer (unspecified)	Dog	9.1	Pound

EON-147369	11/5/2013 10:51	Smokehouse Chicken Breast Strips and/or the Costco brand of chicken tenders	My dog was having bouts of vomiting and diarrhea, which eventually required a 3 day emergency veterinary hospital stay. The diagnosis was hemorrhagic gastroenteritis, and because he is a miniature schnauzer his pancreatic enzymes were monitored, due the breed predisposition to pancreatitis, and also found to be elevated. He was on a low fat diet and his treats were given in moderation. The treats I had for him at the time were the dried chicken breast strips, he would get half of one a day. I believe the brand was from Costco, and they were called Chicken Tenders, but I don't remember the brand name. When he would get sick I would not feed him treats for a few days, and when he would get better I would add the treats back into his diet. One day I gave him an entire chicken breast strip treat, about an hour later he began vomiting, by the end of the day he had diarrhea and the next morning I took him to the vet when he was not drinking and had blood in his stool. He recovered well enough to come home after 3 days. He was on a vet provided ultra low fat diet for a few days before I put him on a high quality gluten-free food with a different protein source. He was doing much better after a couple weeks, and I thought it might have been the food he was on previously that made him sick. I gave him a half a chicken breast strip after approximately 3 weeks on this new food, and he immediately starting vomiting and developed diarrhea. I had leftover medication (metronidazole) from when he came home from the vet last time which I put him back on until his symptoms cleared. He has not had jerky treats since and has been in good health.	1.5	Years	Schnauzer - Miniature	Dog	17	Pound
EON-147367	11/5/2013 10:45	Milochicken treats	Vita life chicken tenders and Milo dog treats,,, she loves milo kitchen treats but after awhile started to throw up and loose weight. She's had the vita chicken tenders before but like I said she loved the milo.are her belly acting up took her to vet got blood work and all now needs follow up and even a ultra sound. My wife has thrown away all treats and went to a all natural way rice and chicken boiled. But may be to late if she doesn't gainmore weight or get better we will loose her.I need HELP, but these dog treats didn't help	6	Months	Boxer (German Boxer)	Dog	15	Pound

EON-147360	11/5/2013 9:51	DOCTORS FOSTER and SMITH CRUNCHY SNACKS WITH CHICKEN TREATS FOR DOGS	Presented on 9/10/13 for polydipsia and apparent urinary incontinence for about 1 week. Urinalysis at that time revealed a low S.G. = 1.008 1+ blood, 1+ protein, pyuria, hematuria and bacteria. A CBC & chemistry was performed and abnormalities included: elevated liver enzymes, AST = 124, ALT = 833, Alk Phosphatase = 215 & Bilirubin = 0.7. He was started on amoxicillin 800 mg BID and Denamarin. He did not improve and additional symptoms included polyuria, intermittent vomiting, decreased appetite & weight loss. He was ultrasounded & a liver aspirate revealed: hepatic changes consistent with vacuolar hepatopathy vs. inflammatory/infectious or neoplastic disease, cytology consistent with mild vacuolar hepatopathy; suspected lymphocytic infiltrate. In addition he devoloped diarrhea on 9/24/13. CBC/chemistry repeated on 10/5/13: AST = 202, ALT = 1627, Alk Phosphatase = 357 & Bilirubin = 1.4. In addition to the amoxicillin & Denamarin he was started on Ursodiol 300 mg SID & Vitamin E. Subsequently the owner heard the news about the jerky treats & realized she was feeding him treats that contained dried chicken & immediately discontinued the treats. Within 3 weeks the dog's symptoms had resolved, he gained weight and re-check CBC/chemistry revealed that all of his liver values had returned to normal. At this time we have discontinued the amoxicillin and the ursodiol, but we will continue the Denamarin and Vitamin E for another month before rechecking his liver values. At that time if the values are still normal we will discontinue all supplements and then recheck again in another month.	8	Years	Doberman Pinscher	Dog	110	Pound

EON-147357	11/5/2013 8:42	Waggin' Train chicken jerky treats	(b) (6) ingested chicken jerky treats made by waggin' train for many many months and she suddenly developed kidney failure. She died (b) (6). My other Dalmatian is now starting to show signs of kidney failure.	10	Years	Dalmatian	Dog		
EON-147355	11/5/2013 3:42	Dingo dog treats Chicken Flavor	On (b) (6) I gave my 3 min pin puppies dingo chicken dog treats, On thursday (b) (6) became lethargic and wouldnt eat. By friday morning he was very sick throwing up and diarrhea i immediatly took him and his brother (b) (6) to the vet because (b) (6) was starting to look lethargic too. I figured they had parvo from their symptoms and told that to the vet he agreed with me due to the symptoms that were presented but we didnt actually give them the test. The puppies were treated for parvo but (b) (6) was dead by (b) (6) and stitch passed away on (b) (6). It was devastating to my children and myself. I could not understand how these healthy puppies who went know where got sick and how the one surviving pup named (b) (6) who was kenneled with his sick brothers did not catch the parvo. Then i saw on facebook the recall of the treats and asked my vet at an appointment on (b) (6) if my puppies could have gotten sick from the treats and he said it was very likely due to the one pup not getting sick and the other 2 getting sick. I want justice for my puppies because they died a horrible death and they shouldnt of had to suffer like this. I want to know how do i go about looking into a lawsuit against the makers of these products that killed my puppies.	3	Months	Pinscher - Miniature	Dog	7	Pound
EON-147353	11/5/2013 2:42	Dingo twist sticks rawhid chew with chicken in the middle	My husband had given my shishon puppy who was 6 mo old a dingo rawhide stick. One week later she became ill. I took her to the vet and was told she had pancreatitis. She stayed over night at the vets and I took her home. 2 days later she started having emesis I then took her back to the vet. They did surgery on her thinking she may have a bowel obstruction. She did not have a bowel obstruction but her pancreas was inflammed. She stayed at the vet for 4 days and on the fifth evening I was told her condition was deteriorating. She went into respiratory failure, became anemic and multi system organ failure. At this time I chose to have her put down. I do not know if the dingo raw hide stick is what caused her pancreatits or if it was something she might have eaten outside that could have caused this. I threw the rest of the dingo rawhide sticks away because I did not want my other dogs to eat them. I just found out about the recall and wanted to alert you to my puppy's illness and death.

EON-147338	11/4/2013 20:12	Pup-peroni Lean Beef Flavor dog snacks (Del Monte)	Starting 11/2/13, patient was inappetent, had a head tilt to the left, and was lame on the LF leg. Patient had been lethargic for about a week, but more so since 11/2/13. Patient presented today (11/4/13) for these reasons. On exam, there was an head tilt to the left, but no signs of an ear infection. No nystagmus present. Patient was non-weight-bearing lame on the LF leg, but not painful. When attempting to walk, she walks to the left, but stops quickly and appears uncomfortable. No pain was elicited on exam - suspect neurological lameness. Patient was dehydrated as well and had a BCS of 3-4/9. Bloodwork was performed on 11/4/13 and was within normal limits. Patient is also subdued and mostly stays in lateral recumbency. SQ fluids were given. Patient was sent home with Metacam (NSAID), meclizine (for vestibular signs), and a/d food.	11	Years	Terrier (unspecified)	Dog	13.25	Pound
EON-147337	11/4/2013 20:06	Dogswell Happy Hips Duck Breast	I had been giving him Dogswell Happy Hips Duck Breast Treats just in the last year. My dog was almost 12 years old and had been very healthy. My dog became very lethargic his stomach was full of fluid and he had to have emergency surgery for a septic abdomen. The surgery cost me \$8500. When he came home from surgery he appeared better until I gave him Dogswell Happy Hips Duck Breast Treats again and he immediately became sick again. I took him back to the vet and his stomach was full of fluid again and they recommended I put him down as his body was shutting down and they couldn't be sure that he would recover.	11	Years	Rottweiler	Dog	90	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-147336	11/4/2013 19:21	Purina Indoor Formula Cat Food	<p>I purchased a 16 lb. bag of Purina Indoor Formula from Petsmart on 3/16/13. I did not open the bag until the night of 3/17. I put approximately ½ cup in the bowl that night and put another ½ up in the bowl on 3/18 at around 0600. At 0615, my cat, (b) (6) seemed okay and was walking around acting normal. Around 0700, I took a shower and was getting ready for work. I blew dry my hair and (b) (6) came into the bathroom and was still acting okay. Then, I got dressed and was just about to put on my makeup when (b) (6) vomited clear liquid and started growling and hissing. You could tell he was in extreme pain.</p> <p>I called my vet's office that morning, 3/18/13, and was told to bring (b) (6) in to see (b) (6). (b) (6) was not sure what was wrong with him. She gave him liquids, steroids, pain meds and high powered antibiotics. That night when I brought him home, he smelled like he was dying. I took him back to (b) (6) the next day for fluids, more meds and an x-ray. When I picked up (b) (6) that night, (b) (6) said that when she drew (b) (6) blood it smelled like sulfur or rotten eggs. (b) (6) said she had never smelled anything like this before in all the years she had been in practice. I told her, my cat was acting normal until he ate the new food. (b) (6) told me that when she took (b) (6) x-ray, it showed his digestive tract had stopped working. She told me to take him to another place for an ultrasound.</p> <p>The morning of 3/20/13, I took him to another veterinary clinic that specialized in ultrasounds. The person who read the ultrasound said there was no course of action for this very perplexing case. She said his digestive tract was not working.</p> <p>That night we took him to an ER for animals and they gave (b) (6) fluids, pain meds, antibiotics, antimetics, and kept him over night. At the ER they</p>	10	Years	Domestic Shorthair	Cat	10	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>took an UA from (b) (6) and his urine was green. The ER vet, (b) (6) had never seen cat urine that was green before. (b) (6) continued on having more day and ER vet appointments in the days that followed. Everyone was perplexed by the cause of what was making (b) (6) sick. The only thing (b) (6) did before he got sick was eat the new food.</p> <p>(b) (6) is ten years old and has never had any medical conditions before. He has been healthy until after he ate the new food. (b) (6) told me she thought it was the new food and he had food poisoning. (b) (6) said the only treatment for tainted food poisoning was flushing the system, antibiotics, pain meds, and pray. (b) (6) said that after an animal has eaten tainted food the response is normally not positive. If they do respond there could be lingering medical conditions that followed. It has now been almost 7 1/2 months and (b) (6) is still not to baseline. He might not ever be the same but he is alive.</p>						
EON-147335	11/4/2013 18:42	DOGSWELL HAPPY HIPS DUCK BREAST Glucosamine & Chondroitin. Helps maintain Healthy Joints. No Added Hormones No Antibiotics No Fillers No Byproducts. Net Wt 15oz	<p>(b) (6) was a 10 year old healthy and active dog. She was alert, active and healthy until I started giving her "Dogswell Brand, Happy Hips Duck Breast" jerky treats. I always gave (b) (6) dog biscuit treats and 1 time only, I purchased duck jerky treats in mid-September 2013. (b) (6) was given 1-3 jerky pieces, 2-3 times a week and over a period of 2-3 weeks. In early (b) (6), (b) (6) annual exam including blood work for her Addison's Rx refill was performed, her BUN and Creatinine ratios were off. I had her retested 2 more times over 3 weeks time and her kidneys showed sudden and rapid decline. Ultimately on (b) (6) made the difficult decision to euthanize (b) (6) After the fact I learned of recalls and issues with dog jerky made in China. I called the manufacturer of the product who advised the batch of treats I purchased were tested and approved for not containing harmful antibiotics or hormones. I discussed this with my Vet, (b) (6) (b) (6), he advised there is no confirmation on why the made in China jerky treats are causing kidney failure in animals. These products need to be removed from store shelves and the FDA should take stronger actions on pet foods that are imported from outside the U.S. I would like to know if the treats I purchased and gave my dog were the cause of her sudden kidney failure.</p>	10	Years	Beagle	Dog	15	Pound
EON-147334	11/4/2013 18:36	Loving Pets Meat Sticks	<p>After being given a treat on the evening of the 24th, (b) (6) became lethargic, had excessive urination, vomit and diarrhea. She had a seizure at 6PM on the 25th and was taken to a veterinary emergency hospital. After several tests it was determined that the best course of action would be to put her down.</p>	8	Weeks	Retriever - Golden	Dog	15	Pound

EON-147325	11/4/2013 17:30	Canyon Creek Ranch Chicken Tender	We purchased the Canyon Creek Ranch Chicken Tender Jerky Treats this past Christmas (2012), and gave her a treat very few times between December and May. May 2013 she had a surgery to remove a fatty mass, and her blood work was great. Over the summer, while teaching (b) (6) to use the side of the new house when going to the restroom, we used the Jerky Treats as a reward for good behavior. Looking back I realized towards the end of September, she certainly wanted to drink more water, and urinate, along with starting to look a bit thinner than usual. On (b) (6), we noticed the first sign of something unusual going on, she did not finish her breakfast. The remainder of the week, she would continue to not have an appetite at all, and associated it with anxiety due to the fact that the family was preparing to go on vacation and packing. We tried different food to entice her to eat. When she still had a lack of appetite, my Brother-in-law took (b) (6) to the vet Around (b) (6), (b) (6), in which the vet said it probably was anxiety, and to feed her chicken and rice. She did eat it, but never got back to her normal everyday happiness. We returned from Vacation on (b) (6). (b) (6) was still with my Brother in law for the week, and on Wednesday, she began to vomit and have diarrhea through out the day. HE took her to the vet again, and ran blood work and did an x-ray. The x-ray looked normal, but the blood work revealed she was in the final stages of kidney disease. The vet gave her medication, and switched her diet immediately to help the kidney's. Unfortunately, and very unexpectedly, (b) (6) passed away around 2:30AM on Thursday Morning.	7	Years	Retriever - Labrador	Dog	80	Pound
EON-147324	11/4/2013 17:30	Kingdom Pets Chicken Jerky	Patient was vomiting Sunday 10/27/2013 and came in on Monday 10/28/2013. CPL test result normal, Lepto titre result is negative, and blood work showed highly elevated liver enzymes.	8	Months	Griffon - French Wire-haired Pointing	Dog	46.1	Pound
EON-147323	11/4/2013 17:15	Wild Harvest Parakeet Advanced Nutrition Diet with Seeds Fruits and Vegetables	After introducing a new brand of seed mix, the female (b) (6) became listless and slept all day, except when she ate. I was out of town on Monday, (b) (6) when she died. Her mate, (b) (6) began exhibiting the same symptoms, then became uncoordinated and sat at the bottom of the cage. I took him to the vet last Wednesday (b) (6) and she x-rayed him. He had metal fragments in his crop and gizzard. She diagnosed him with heavy metal poisoning and I began twice daily injections (3units/injection) og chelating agent. This morning, Monday (b) (6), he was in worse condition. I took him to the vet and she examined him. He had lost 30% of his body weight and she prescribed forced feeding and injected him with fluids for dehydration. One hour after we returned home, he had a spasm and died instantly.	2	Years		Budgerigar	30	Gram

EON-147308	11/4/2013 16:21	Waggin Train jerky treats	<p>Owner had been feeding Wagon Train jerky treats for 2 weeks when (b) (6) got sick. She had been feeding the treats to him whole, not in pieces. He was eating Pedigree food and was receiving no other human food to treats at that time.</p> <p>(b) (6) presented 11/30/2011 for acting strangely/lethargic. He had a fever of 104.4 degrees fahrenheit. No bloodwork was done that night except a lyme/heartworm/anaplasma/ehrlicia test, which was negative except for anaplasma phago. Ciprofloxacin was prescribed. The stool sample was negative.</p> <p>(b) (6) came back for a recheck 12/1/2011 for vomiting. There were multiple piles of vomit when the owner came home from work. His temperature was 102.8 and he was dehydrated. Physical exam was unremarkable. Lateral and VD radiographs showed splenic enlargement, but no other abnormalities. Bloodwork showed a BUN of 62 (7-27) and creatinine of 2.1 (0.5-1.8). Urinalysis showed a pH of 7.0, specific gravity of 1.028 with 500mg/dL proteinuria and 250 Ery/ul and 100mg/dL glucosuria. He was given subcutaneous fluids, anti-nausea medication (cerenia) and Ampicillin. Lepto titers were sent out, which came back negative. Blood pressure was elevated at 146/111 with a mean of 116. He was transferred to an emergency overnight facility.</p> <p>An ultrasound was done at the emergency facility, which showed mildly hyperechoic (bright) kidneys, which were normal in size and shape (rule out glomerulonephritis, interstitial nephritis, tick bourne disease). A tick panel was also sent out. Lyme C6 was <10 U/ml, Ehrlichia and Anaplasma and RMSF titers were negative. Urine protein:creatinine ratio was 0.95</p> <p>He was sent home on Doxycycline 150mg twice daily, Enalapril 10mg daily, Amlodipine 5mg 1 1/2 twice daily, and Baytril 136mg 2 tablets daily.</p> <p>Bloodwork was rechecked 12/6/2011 and BUN had dropped to 30, creatinine 2.2, with urine specific gravity of 1.011 and 500mg/dL proteinuria, and 50 mg/dL glucosuria. Started K/D kidney diet 12/16/2011.</p> <p>Proteinuria and glucosuria resolved by 1/16/12, blood pressure medications and K/D diet were continued.</p> <p>As of 8/2013, owner had stopped giving all medication and discontinued kidney diet, kidney values and urinalysis back to normal. BUN 10, creat 1.3, urine specific gravity 1.020 with no further proteinuria or glucosuria 6/3/2013.</p>	4	Years	Retriever - Labrador	Dog	61	Pound

EON-147297	11/4/2013 15:21	Cadet Gourmet Duck Breast	Diarrhea with blood, vomiting, lethargic and loss of appetite. Treated with Flagyl and Pepcid. Then had urinary infection, elevated kidney levels and excessive drinking. Treated with Clavamox for one week and Batryl for two weeks. Infection gone now but is scheduled to go back to the vet because there are crystal in urine. Is still urinating frequently, not drinking as much, but very tired and not eating very much.	9	Years	Boxer (German Boxer)	Dog	60	Pound
EON-147295	11/4/2013 15:15	Pupperoni Chicken	Ate approximately 12 Pupperoni chicken sticks over a 2 week period - one stick per day (June 15 - July 2, 2012) He became lethargic, was having pee accidents in house within the second week. Some diarrhea/loose but thought it was the heat temperature in (b) (6) those weeks was high. He was never outside unsupervised, mostly indoors due to the heat. Drank alot of water, again thought it was because of the heat. We stayed in except to go out to pee/pooh. On July 2, 2012 he woke and was starting to vomit. I went to get something to clean it up and he came to me starting to have severe diarrhea that was dark and bloody. I took him to the vet as soon as possible. My vet failed us.....he did not do a blood test or hydrate him. I should have requested but didn't. He sent us home with meds. He could not keep fluids down so I could not get the meds in him. He died six hours later as I slept beside him on the floor. Unfortunately, I did not have any med records as the vet did nothing. I had him cremated so no test were done. I will be making an additional report as my American Cocker Spaniel got deathy ill 2 days later and was saved by a different vet. She died 4 months later after struggling to live with damaged kidneys. The product was PUPPERONI CHICKEN STICKS PURCHASED AT PUBLIX GROCERY STORE IN (b) (6). THEY HAVE NOT BEEN RECALLED AND ARE STILL ON THE SHELVES MAKING OTHER DOGS SICK AND KILLING THEM.	11	Years	Spaniel - Cocker English	Dog	37	Pound

EON-147263	11/4/2013 13:15	Kingdom Pets - Duck & Sweet Potato - Premium Treats for Dogs	(b) (6) stopped coming on walks with us (I thought he didn't want to walk because it was too hot). (b) (6) started eating less (I thought I was giving him too much food). (b) (6) ran into the living room and urinated on the couch and carpet (he was never allowed in there and never eliminated in the house). (b) (6) started throwing up large quantities of yellow foamy fluid. Sometimes it seemed like he was drinking a lot of water, but that wasn't consistent. I took him to the vet after two episodes of vomiting. He went in on Thursday, had some tests on Friday, walked out to visit me on Saturday. He stayed Sunday and on Monday morning the vet drew another blood test for parathyroid, I think, and (b) (6) had to be fasting. (He wasn't eating anyway.) I called to take him home on Monday, but the vet said he wasn't doing well enough and we should wait for the test results. I visited him on Tuesday. He had an IV running, but was too weak to get up. He had labored breathing when I visited, and he was dead the next morning.	7	Years	Great Pyrenees	Dog	94	Pound
EON-147262	11/4/2013 13:15	Waggin Train Wholesome Chicken Jerky Tenders Chicken Dog Treats	On 10/26/2013, our 2 adult German Shepherd dogs (b) (6) 6 yrs and (b) (6) 4 yrs approximately) were fed Jerky Tenders, 1 each. 2 days later, on 10/28/2013, (b) (6) became ill. Over the next few days, we observed him vomiting clear mucous with pine needles and coarse grass (this is what he eats when his stomach is upset) His gut was making very loud noises constantly. Not eating. Inactive and quiet, unusual because he's very playful with lots of energy and eats very well. Started bland white rice & chicken diet and water only. We'd been watching him all along to observe his stool but unable to find any with all the leaves in our yard. On 10/31/2013, we discovered a bloody, gelatinous, dark red stool but not sure it was from (b) (6) On 11/01/2013 A.M. we found a 2nd bloody stool. At this time, 11/01/2013, we immediately took (b) (6) and the stool to our Veterinarian (b) (6)) (b) (6) examined (b) (6) and the stool sample. The stool was found with gross blood and Campylobacter. Physical and rectal exam negative. She diagnosed him with Campylobacter colitis and sent us home with Tylan Powder, Famotidine, and Provable and gave him an Ondansetron SC injection for nausea. We've continued the bland diet over the weekend and given the meds as prescribed. He has improved greatly and back to regular food and activity. My husband just remembered giving the dogs the chicken Jerky Treats that have been investigated for harm and deaths in dogs and cats. I called (b) (6) today, 11/04/2013, to report on (b) (6) condition and told her about the Jerky Treats being given just before (b) (6) illness. She suggested I fill out a report on this website.	5	Years	Shepherd Dog - German	Dog	86	Pound

In about five hours he became listless and tired looking. He would not jump up on my lap, I had to pick him up. In about another five hours he vomited a yellow mucous, and was very lathargic for most of the day. He did rebound on the following day and is alright now. The product is labeled MADE IN USA by trader Joes. We have purchased this product many times before and he has enjoyed it. This is the first incident of illness. We can hold on to it , but we are returning all the un opened packages.	6	Years	Papillon - Spaniel - Continental Toy (with erect ears or with dropped ears (Phaléne))	Dog	5	Pound
EON-147249	11/4/2013 13:01	Dentley's Rawhide Stuffed Rolls with real sweet potato and duck	<p>Our dog (b) (6) had his annual check-up in early June and we were told he was perfectly healthy. He had his teeth cleaned and was prescribed fish oil for his coat. He was up to date on all vaccinations and looking forward to happy 4th birthday in mid-July. About then we tried three new-to-us varieties of products by Dentley's and found our dog enjoyed them, especially the sweet potato and duck (the others were beef jerky and chicken munchy chips). These were to replace varieties of rawhide treats that we were told by PetSmart staff had been discontinued. At the same time we purchased a new variety of chicken strips made by Vitality along with a salmon oil product at PetCo to replace his prescribed fish oil. We began giving all these products to our dog at the same time. Soon after, he began vomiting. We didn't initially connect this to the treats. Rather, we suspected the salmon oil and discontinued it. But the occasional vomiting continued. In August, growing concerned before taking a trip with him, we brought (b) (6) to our local VCA Desert Animal Hospital in (b) (6).</p> <p>The vet who saw us that day prescribed Pepcid and anti-nauseau medicine. This helped and there was no vomiting while we travelled but during that time we did not give our dog any of the Dentley or Vitality treats. Upon returning home, we resumed giving him the treats along with a refill of the prescription fish oil from the vet. He began vomiting again almost immediately but again, we didn't connect this to this to the treats, instead this time to the prescription fish oil which we then discontinued. This confused us because he had taken this prescribed fish oil many times before with no adverse reactions. We were assuming consuming oil might make him nauseous, even in the small amounts we gave it, as it might us.</p> <p>At this time he finished the Vitality treats and we did not replace them, choosing to use up what we had of the Dentley's we had repurchased. Since he was fondest of the duck and sweet potato jerky by Dentley's, we gave him those fairly steadily in the week leading up to October 5th. That Saturday morning, at 4am our dog suddenly became violently ill. He woke</p>	4	Years	Schipperke	Dog	20	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>us up running from door to door in the house and when we let him out he began vomiting profusely, eating grass and repeating. We called the (b) (6) 24 hour emergency hospital in (b) (6) and they at first assumed it was gastro intestinal. He continued vomiting, ate nothing but grass, dug holes in the ground looking for comfort and could not stand still. We took him to (b) (6) when it opened that morning. Triage assumed it was simple g/i and made an appointment for us later in the day. But a couple of hours later (b) (6) vomited blood. We rushed him to back (b) (6) . (b) (6) (b) (6) then began a process that ultimately saved our dog's life. Almost immediately she realized he was suffering from severe / acute pancreatitis.</p> <p>Our dog was in agony, his gastro intestinal system had shut down, his stomach was full of backed up pancreatic acid and his pancreas, stomach and small intestine were inflamed. His liver and kidneys were also in danger. She got him on IV and strongly advised us to take him immediately to (b) (6) 24 hour Emergency in (b) (6) for round the clock care which she said was essential to his survival. We did. He was admitted that evening and for the next 48 hours our dog's life hung in the balance. We were present at the hospital for much of that visiting with him several times a day and otherwise talking with his doctors every few hours, even through the night, by phone. At one point his blood work wasn't improving enough for their liking - his white blood cell count was still high - and a surgeon was consulted. This was the worst, most critical time for all of us. But that Monday morning the surgeon advised against surgery and advised instead that IV pain medication/ antibiotics and everything else they had been giving him be continued. Later that day, while visiting with him, we saw the first improvement in his behavior. He ate a small amount of food and he had a bowel movement. Although he was still vomiting, more signs of recovery followed and after four nights there he was released to us that Wednesday. He was suffering now from esophagitis which made it difficult for him to eat or drink and he needed four more days of IV medicated fluids</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>which were administered every 24 hours at our (b) (6) clinic. During this time at home we slowly introduced solid food - first chicken baby food then prescription Royal Canin low fat g/i. Once the fluids were done, we started oral medication for a week - 2 antibiotics, anti nausea, Pepcid and carafate for his enflamed esophagus. He continued to improve, his appetite and bowel movements returned to normal as did his energy level, spirits and frankly ours. Two weeks in, on October 20th, he was re-checked by (b) (6). She suggested another blood panel to be sure. And thankfully everything came back normal. One white blood cell count was still high but (b) (6) felt all was well. She will be happy to fill you in from her perspective as well as supply any records. It was two days after when we heard on CNN about the jerky treats made in China. And this was when it all came together for us. My partner and I know our dog. We supervise him outdoors, give him plenty of exercise and play and rest and have always fed him well. Previously his diet consisted of Blue Adult Healthy Weight dry with a teaspoon of Blue canned. We're not scientists but we feel very strongly that the Dentley duck and sweet potato jerky treat, made in China, caused our dog to become so sick that he nearly died. Only because of the expert round the clock care of four veterinarians (b) (6), the expert diagnosis, follow-up and advice of (b) (6) r at (b) (6) and (b) (6) own amazing resiliency is our dog alive today. We've described him here as fully recovered but he continues to require 5mg of Pepcid nightly else he wants to eat grass. We find it beyond belief that this has been going on since 2007, that these products are still available, that pets continue to die or get violently ill, causing pain, suffering and grief, not to mention countless thousands of dollars in medical costs. We strongly urge the FDA to recall these products immediately and that the manufacturer's, distributors and retailers of them be held accountable. We will be getting in touch with each very soon. We have what's left of the jerky products and will be happy to supply samples for testing, especially the suspect sweet potato and duck variety which we so very strongly believe caused our dog's illness.</p>						
EON-147237	11/4/2013 12:27	Duck Jerky Treats	<p>We had 4 out of five pets experience health issues that resulted in death, all were diagnosed with cancer issues to vital organs. Each was in excellent health condition. The issues started after providing the pets animal jerky treats.</p>	12	Years	Mixed (Dog)	Dog	50	Pound

EON-147161	11/4/2013 2:36	Happy Hips Duck jerky Happy Hips Salmon Jerky	<p>I noticed that when I gave her the Happy Hips Jerky strips, duck was her favorite, she would lose control of her bladder more. So I cut down the amount she would get, but still continued to give her the strips over time she came down with a serious bout of diarrhea that I have never seen in her before in all the years I've owned her. We had changed the jerky to the salmon flavored but still the uncontrolled bladder condition would be worsened. We stopped giving her the strips when the diarrhea showed up, it was really bad and if it weren't for my animal science formal training through college we may have lost her.</p> <p>I had to use a great deal of bismuth just to stop the diarrhea. I felt it may be bacterial in nature so I used an antibiotic and after three days of treatment the diarrhea subsided, but it really took a toll on her.</p> <p>When I read the reports of how many pet owners lost there pets because of this I felt for them. What we had to go through we made it through because of my training. Most people could not foot the bill for the Veteranarian fees that would accompany treating a sickness like this. I felt it necessary to report this because I had linked the increasing problem to the jerky treats that we have been feeding her for several months. It</p>	12	Years	Australian Kelpie	Dog	65	Pound
EON-147160	11/4/2013 0:27	Waggin Train Chicken Jerky Treats	<p>Purchased Waggin Train chicken/duck jerkey treats from Costco earlier this year. Our dog developed lethargic tendencies. Would not eat, and consumed large amounts of water. Immediately took him to our vet and he concluded the treats were his cause of distress since we had just introduced them to (b) (6). Our vet had already had several instances of this with other dogs. He put (b) (6) on antibiotics and after a week or so, he seemed fine. But a month or so later, he continued to have bladder issues, which then turned into a severe kidney problem. He died on (b) (6).</p>	13	Years	Retriever - Labrador	Dog	76	Pound

EON-147157	11/3/2013 21:42	Kingdom duck &sweet potato.	<p>I have heard about the pet treat recall and I am now making a connection in hindsight. I have many dogs in my life they are like family and in June I adopted two puppy Rottweiler at 8 weeks of age and a few weeks later gave one to my friend. Both were healthy from the days got them as well as my adult dogs that are fully grown and developed. Sometimes August my dog was at my girlfriends house and had a seizure then again end of sept and I was heading put of town. So for 2 weeks she was staying at the girlfriends house eating her treats constantly and much more often than me simply bringing her over to visit for a day and all of a sudden the puppy went critical. Had seizures after seizures I believe 8 on less than a 24 hr period. Had the 7th one at the vet After making a emergency appointment at about 16 hrs into the ordeal and went into a coma. The vet injected her with liquid phenobarbital I believe to no avail. He immediate told my girlfriend to drive her to a aminor icu 20 minutes away upon arrival they quickly realized the situation was grave and did several test with no conclusion answers other than she was dieing. Blood oxygen levels where around 80% could not breathe on her own. Possible liver and damage Brain damage the following morning it was found she had Phomonia and had the 8th and Final seizures and I was told via email she would probably not make it though the night again she was to weak to have a MRI or any surgery her chances of survival was given under 5%. At this point she was in a oxygen box and on high doses of phenobarbital and antibiotics.</p> <p>I made the decision to head home a week early but would take 36 hrs to get home some 6,000 miles 3 flights and 14 hrs of layovers. When I checked my email before I left for the long 9 hrs flight she did survive the night and antibiotic started to clearup all the other issues and her doctors where all in amazement she was alive. By the time I got home about 15 hrs after last major update she was now able to walk again. She has since been home healthy and seizures free for over a month after a change in</p>	6	Months	Rottweiler	Dog	56	Pound

			<p>her diet and treats.</p> <p>I attribute her rapid decline to the following reasons Dangerous dog treats. Then a increase in those treats when she was eating many of them daily.</p> <p>Her almost as rapid recovering I attribute too Change in diet at the vet Emergency care Antibiotics and medicine. No longer having dangerous treats</p> <p>The doctors at the ICU vet she was taken too made it very clear to me they have never seen a puppy at 5 months of age arrive in such a critical situation in there many years of work. After spending over 72hours there and multi test they still only had best guess as to what caused her to get so sick so fast. She kept being moved from emergency care to neurological and back and forth to no avail of the cause.</p> <p>This was before the news of these treat recalls where known though.</p> <p>These are approxiate seizure times 230am. After late dinner and treats. 11 am after breakfast and treats. Was put in crate with treats so she didn't have seizure on carpeting 12 noon. 2 pm 230 p. still in crate emergency vet appointment made. 3 pm did not move much after the 6th one. Was carried to car Togo to vet. Vet found her very shallow breathing and unresponsive had 7th violent seizure minutes later after being given first shot of phenobarbital and barely had a pulse ordered to go to emergency care. They gave more medication. And tried to get her to do anything i don't know when she first had there food. Overnight had another seizures and given more drugs. Over a month later and change of diet has now been seizure free since coming home.</p>

EON-147149	11/3/2013 19:06	Waggin Train purchased from Big Lots store in Johnson City TN	(b) (6) began to gain weight rapidly in a short amount of time. Over the course of the next few weeks, he became lethargic, nauseous, polydipsia, and began to lose his appetite. He was brought to our veterinarian (b) (6), who ran numerous tests and (b) (6) BUN and creatinine levels were extremely elevated indicating acute renal failure. (b) (6) had ruled out any poisoning. (b) (6) health deteriorated rapidly and we had (b) (6) put to sleep.	3	Years	Retriever - Labrador	Dog	90	Pound
EON-147148	11/3/2013 19:00	Kingdom Pets Chicken Jerky	I came across this posting on Dogster website recently - note the date 2009!! I bought a bag of Kingdom Pets chicken jerky (Made in China-which I didn't see!) at Costco several months ago and have been feeding small amounts to my minature dachshund. We have had to take her to the vet several time for various gastrointestinal illnesses that they could not determine what was wrong. Blood tests, blockages, etc. came back negative. Last night after feeding her more than her usual amount of chicken jerky she was vomiting and throwing up. We feed her Innova Evo and Evangers so I know it is not her kibble! I Googled Kingdom Pets Chicken Jerky and found LOTS of listings about people's pets getting ill and some even dying after feeding this to their pets! I am definitely going to report this to the FDA and THROW away the bag! Anything else I should do to report? And anything else I should be doing for our little (b) (6) other than stop feeding her this product?? Edited by author Sun Apr 5, '09 9:36am PST	7	Years	Dachshund - Miniature	Dog	13	Pound
EON-147147	11/3/2013 18:57	Breathies Chicken Breast with Mint & Parsley made by Dogswell	Lethargic, intestinal and digestive issues and pain after eating chicken jerky made in china (Dogswell breathies made of chicken breast with mint and parsley). Given to him on three separate occasions with the same reaction each time. I stopped giving him this product and set it aside. I recently read about problems regarding jerky treats from china, and am reporting this problem.	5	Years	Terrier - Jack Russell	Dog	15	Pound

EON-147146	11/3/2013 18:12	Waggin Tail Chicken Jerky Treats	Began feeding our dog chicken jerkey treats made by 'Waggin Tail' in 2009. She became less and less energetic, and had an ammonia smelling breath. I was concerned about the treats because I had heard that certain treats from China were causing deaths in dogs. I called the 1-800 number on Waggin Tail treat bag. The person in 'Customer Service' told me that they had had no complaints about their treats and that they were perfectly safe. My pet's health began to decline steeply as we continued to give her the treats while feeding her 'Healthy Choice' dogfood (made in USA). She began to loose control of her back legs. A lab test from the vet revealed a pathologically high BUN and Createnin which was indicative of renal failure. She was beyond help. We---a doctor and a nurse---administered IV's to her to try to hydrate her and keep her going but her kidneys were too far gone. One day she collapsed in her own vomit and stool. We cleaned her up and tood her to the vet to be put to sleep.	10	Years	Shepherd Dog - German	Dog	72	Pound
EON-147145	11/3/2013 17:30	Dogswell Vitality Jerky Bars	serving Dogswell Vitality Jerky Bars Lamb and Veggies and another type with lamb (tossed pkg before dogs got sick) to (b) (6) (4 yrs, 16 lbs) and (b) (6) (3 years, 11 lbs). (b) (6) got symptoms first. severe vomiting, no diarrhea, very lethargic, refused all food and water until cerenia and famotidine injection by vet. (b) (6) got symptoms a few days later.	4	Years	Poodle (unspecified)	Dog	16	Pound
EON-147143	11/3/2013 15:45	Merrick real cuts Jerky strips	(b) (6) began vomiting frank blood with mucus approximately 20 hours after the ingestion of one Merrick Real Cuts chicken jerky treat. Owner had just purchased the product that day. (b) (6) had no previous ingestion of this product prior to 11/2/13. She arrived at (b) (6) Vet ER Clinic around 12 pm 11/3/13 shortly after vomiting once frank bloody fluid. She was bright and alert on exam. Abdominal palpation nonpainful/unremarkable. No recent change in diet other than one Merrick chicken jerky treat. CBC/Chem/Elec profile revealed an abnormal elevation in Amylase 1637 (500-1500), Lipase 2109 (200-1800) and CPL with an abnormal reading. Platlet count of 36 (will recheck at later time). (b) (6) hospitized to treat suppotively/symptomatically for suspect pancreatits with possible thrombocytopenia. Place on 2xmaint LRS, IV Metrondazole 15 mg/kg BID, Cerenia 1 ml sq. SID, and IV protonix 8.9 mg SID. ASPCA animal poison control center contacted and case number 130153080 given. Directions were to treat supportively/symptomatically.	7	Years	Spaniel - King Charles Cavalier	Dog	19.7	Pound

EON-147142	11/3/2013 15:00	Waggin' Train chicken jerky	Dog stopped eating and was vomiting clear, musky looking fluid. She was drinking lots of water, but vomiting. After 3 days, she would pee where she would be sleeping at the time. I am broke. After five days, I took her to the vet. Who ran a number of test. Guessing that dog had Cushing or Diabetes. I could not afford to have them do more test. I brought her home to die.	9	Years	American Hairless Terrier	Dog	23	Pound
EON-147141	11/3/2013 14:51	Kingdom Chicken Jerky Treats	We were giving our dog, (b) (6) Kingdom Chicken Jerky treats from the Costco in (b) (6). She started "leaking" urine and the Vet thought maybe it was due to her age as an older dog. Then she started having more problems and we found out she had kidney disease.	9	Years	Terrier - Rat	Dog	21	Pound
EON-147140	11/3/2013 14:00	Mini Dingo Meat in the Middle!	We noticed on and off that (b) (6) had twitching and leg jerking when she was at rest. This happened very infrequently--months apart sometimes and sometime more frequently as in only days apart. Mentioned it to the vet at one point and vet documented that. In May of 2013 she had a seizure and we took her to the vet next day. Vet did not decide to medicate at that time. In August 2013 she had another seizure, followed immediately by a second, more severe seizure. Took her to the vet within days--as soon as I could get her in--and the vet thought she could possibly have epilepsy. We started epilepsy meds on her and she has been on them for a little over one month. Then we heard at the end of Oct. on the news about jerky pet treats--specifically with chicken jerky. We had been very occasionally and sporadically feeding these to both of our mini dachshunds. (b) (6) had had the twitching and then the 2 seizures, but she had also been periodically vomiting and refusing to eat, hanging her head and turning away from the food bowl at times. Sometimes her vomiting was only once, and sometimes it was several days in a row. We now realize that the jerky treats were fed very seldom, but when fed were fed several days in a row or several times in a week before being put away and forgotten for months in the other room. That seems to coincide with the approximate frequency of (b) (6) symptoms of vomiting and/or twitching and seizures. The most recent brand of rawhide bones we were treating the dogs to had chicken jerky in the middle of them. We still have most of the bag of bones left.	3	Years	Dachshund - Miniature	Dog	14	Pound

EON-147135	11/3/2013 12:15	Waggin Trails Chicken Jerky	(b) (6) was a very healthy Pomeranian that loved her treats. We bought the Waggintrail chicken jerky treats and she absolutely loved them. She was so happy when she would see the package ...she just danced around waiting for us to give them to her. Shortly after that we could tell she was feeling bad...and having accidents in the house. The vet told us she had kidney disease. We tried everything the vet told us, along with several trips to the emergency vet, including stays at the vet, and weekend stay at the emergency vet. Unfortunately after 8 months of hoping and praying and doing everything we possible could to help get her better....she passed away in the night while I was holding her and walking the halls of our home trying to give her some comfort. I am so sad as she was such a happy loving little girl, to have to go through this pain and discomfort from something that we thought was giving her joy as she loved those treats. I did not know about the issues with these treats until hearing the symptoms on a TV report. I do not have any doubt now that this was what happened to our (b) (6) If I can provide any of or vet reports or anything that might help in keeping another persons loving pet to avoid thisplease let me know. We were so lucky to have had her in our lives...she brought us so much happiness ...I feel so bad that I gave her something that caused her so much pain and ended her life. Please help so no other pet will go through this. thank you.	8	Years	Other Canine/dog	Dog	13	Pound

EON-147133	11/3/2013 11:36	Waggin' Train Wholesome Western Grill Assorted Dog Treats	<p>Dog presented on 10/11/13 for lethargy, decreased appetite, and non-specific pain. Dog's history included inappropriate defecation, panting, lack of drinking and decreased exercise tolerance. Owner first concerned about back pain. No back pain was discernible on exam nor any neurological changes. I offered diagnostics that were declined initially. Pain medications were sent home but was unresponsive. Dog then presented for increased discomfort of abdomen on 10/16/13. Minimum data base was performed (CBC Chemistry UA Pancreatic Lipase and Abdominal Radiograph). Nothing specific was determined however kidney values were increased. Dog was administered subcutaneous fluids. Dog was sent home with sucralfate, famotidine, and prednisone. Owner declined sending radiographs in for radiologist referral.</p> <p>No specific diagnosis was determined. The owner discovered the FDA investigation on Chicken Jerky Treats made in China and was concerned that there may be a correlation to (b) (6) illness. Waggin' Train assorted dog treats were brought in as example. Dog was being fed approximately 1 whole treat every other day for 6-8 weeks prior to initial event.</p>	7	Years	Pug	Dog	29	Pound
EON-147132	11/3/2013 11:30	Cadet Chicken Jerky Cadet Duck Jerky & Beefeater Sweet potato	<p>she had thrown up multiple times, lethargic, and not wanting to eat. I took her to the vet and she had very high liver values,& glucose in her urine. From not eating well and being sick she in turn developed bloat. Once the emergency portion of her illness was past, I am back to square one, What is the underlying cause of this sickness. My vet had suggested fanconi syndrome, which would be extremely odd in a great dane. Which led him to ask if she had eaten any of the jerky treats. She had but it had been approx. 2-3 months prior to here sudden illness.</p>	7	Years	Great Dane	Dog	127	Pound
EON-147131	11/3/2013 11:21	Kindgom Pets Chicken Jerky	<p>We had been giving Kingdom Pets Jerky Treats purchased from Costco to our golden doodle randomly over the last few months. On July 13th, 2013, we brought her to our vet who eventually diagnosed her with renal kidney failure. On Oct. 18th, 2013 we had her back to the vet as she stopped eating and was very lethargic. We were told to give her IV fluids daily for a week to help flush out her kidneys. Soon after we had her to the vet, we learned on the news about the jerky treat problems. Our dog is only 3 years old and was very healthy until this summer. We are confident that these jerky treats from China are responsible for her kidney failure.</p>	3	Years	Retriever - Golden	Dog	17	Pound

EON-147130	11/3/2013 11:00	Dingo - Meaty Middles with Meat inside	I received dog treats in the mail from family member several weeks ago. I noticed after several days after giving treats in the evening that my dog was becoming Lethargic. He did not eat after that very much at all until I stopped giving him the treats. He seemed to recover about a two days or so stopping.						
EON-147129	11/3/2013 10:21	Purina Waggin' Train Jerky Treats	Dog was fed chicken jerky treats and became ill approximately 6 hours after consumption of treats. Loss of appetite, increased water consumption and urination, vomiting. Lost 4 pounds in one week.	11	Years	Terrier - Jack Russell	Dog	12	Pound
EON-147128	11/3/2013 9:45	Milo's kitchen jerky	Diarrhea, vomiting for more than a week. We took him to vet who diagnosed severe intestinal problems. He is now on 2 antibiotics and probiotics but is recovering.	4	Years	Poodle - Miniature	Dog	15	Pound
EON-147127	11/3/2013 8:57	Happy Hips Chicken Breast	My dog was hospitalized for 3 days after eating "Happy Hips." At the time, we thought she just had a stomach upset and didn't link it to the "treats" at all. She had liquid stool (diarrhea technically, but it basically was water coming out). She also ended up with massive gas in her intestines and was highly lethargic.	11	Years	Other Canine/dog	Dog	55	Pound
EON-147126	11/3/2013 8:27	Blue Homestyle Recipe Small Breed	I have fed my dog Blue Buffalo Small Breed Dog Food for several years with no problems. On Saturday November 2, 2013, I opened a sealed can of this food and found that it was covered in mold. I took several pictures and still have the can of dog food. I wanted to report this so no dogs are fed food from this lot. I purchased my dog food at Pet Smart in (b) (6).						
EON-147125	11/3/2013 6:57	Kingdom Pets Duck and Sweet Potato Jerky Twists	Heavy breathing with little exertion. Seems nose is clogged up. He is having some stomach trouble. Not throwing up but what my kids would describe as a "baby barf."	3.5	Years	Shepherd Dog - German	Dog	52	Pound

EON-147123	11/2/2013 22:06	Blue Buffalo Basics dry food sensitive stomach turkey. Blue Buffalo Basics turkey and potatoes sensitive stomach canned food	I had switched my dogs food to Blue Buffalo because I was told at the pet store that this brand was very popular with consumers and apparently it's a holistic brand so I decided to go with it. I have fed my dog Blue Buffalo for approximately three months. At first my dog ate it fine then she was not eating the food so I mixed it with their canned food and about two days into mixing the food my dog threw up one time on that specific day. I didn't think much of it because she seemed fine after so I continued giving her the mixed food and then approximately three days after my dog had excess vomitting and bloody diarrhea so I immediately took her to the vet. The vet asked me if I had fed her anything that I wouldn't normally feed her and I advised her that the only change I made was mixing her dry food with some wet food. The vet asked me what brand was I feeding her and I advised her that it's Blue Buffalo and she told me to not continue to feed her that brand and informed me that there have been a few small breed dogs that have been brought in to her office with the same symptoms as my dog and apparently they have also been being fed the Blue Baffalo brand. I am convinced that this dog food had caused this problem. Now that this has happend I have realized that there were red flags I did not notice before such as my dogs gas had a very potent foul odor. She also was not eating the food and finally she threw up that one day and now had excess vomiting and bloody diareah. This company needs to really look into their product because something isn't right.	3	Years	Mixed (Dog)	Dog	7	Pound
EON-147122	11/2/2013 20:45	Chicken Jerky Treats from Costco	Pet presented for vomiting. O said that pet started about 3 days ago and the vomit was yellowish. Pet is also not eating well. Last night pet began having diarrhea and had about 4 episodes this morning and sometimes it was a bit reddish. Pets energy is also low. Pet is strictly indoor. O thinks that pet has been drinking a bit more lately. O did mentioned that pet loves chicken jerkey treats and gets a couple every day. Pet is overdue for vaccines, pet was on an OWP when O lived in (b) (6), but has been off of them for a few years.	9	Years	Terrier - Yorkshire	Dog	8	Pound
EON-147120	11/2/2013 19:00	Cadet Duck Breast	The dogs were given Cadet Duck Breast treats. When the bag was gone, they Gave Market Cuts chicken Jerky. Then they feed the Cadet Duck Breast treats again and that is when the dogs became ill. The Chihuahua (b) (6) did not feel well but recovered on her own quickly with the need to see a veterinarian. (b) (6) was PU/PD for a week before presentation. He was also lethargic and not eating.	7	Years	Dachshund (unspecified)	Dog	19.8	Pound
EON-147119	11/2/2013 19:00	Petshoppe Duck jerky treats and Petshoppe Sweet Potato chicken wraps	I gave (b) (6) Duck Jerky treats. The brand is Pet Shoppe and is sold at Walgreens. She has had explosive diarrhea (bad spelling) for the past 3 days. It is dark and has mucous in it. I am extremely worried.	7.5	Years	Pug	Dog	21	Pound

EON-147118	11/2/2013 18:57	Kingdom Pets Chicken Jerky	lethargy, polydipsia, polyuria, poor appetite	12	Years	Shih Tzu	Dog	16	Pound
EON-147117	11/2/2013 18:00	Doctors Foster and Smith Healthy Snax Sweet Potatoes Snacks	Purchased Drs. Foster & Smith Healthy Snax Sweet Potatoes Snacks from their website online. Gave about 1/2 a strip total to each dog (2 older dogs are 8 1/2 yrs. and 15 3/4 yrs., both also golden retrievers). Everyone seemed fine and all went to bed as usual, with (b) (6) the puppy in her crate next to the side of the bed. She has been letting me know when she needs to go out with whimpers, but gave no indication overnight of such a need. I discovered that she had had a major case of diarrhea overnight in her crate! She had come to me 2 weeks prior with some diarrhea and I had it under control with powdered pumpkin and cooked rice added to her Natural Choice puppy kibble and no treats. I had begun to add back the Nylabone puppy treats with no problems. Yesterday, the only change from the kibble and pumpkin/rice was the sweet potato snacks as an after dinner treat. Hence my fear that the culprit was the sweet potato snacks. No where on the website does it say the product comes from China and I've always respected and trusted Drs. Foster & Smith, but much to my dismay, upon closer check of the package, it comes from China! Thankfully, (b) (6) is back to normal today with normal bowel movements as well. But no more of these treats for any of my dogs!	11	Weeks	Retriever - Golden	Dog	18	Pound
EON-147116	11/2/2013 14:45	Kingdom Pets wholesome Duck & Sweet Potato, Kingdom Pets chicken Jerky	(b) (6) was playing and eating fine until 9/27/13 and did not want to eat; began heaves late afternoon; and night time was drinking a lot of water with immediate emesis, restless, and moaning. Took him to emergency vet early am-received sq fluids; stomach meds, and pain med-vet said should be ok in a day or two. After left vet-had more emesis and bloody stool-took back to vet. Once again assured will be ok. Within 8 hrs after returning home-had neuro problems and took to own vet and was euthanized as result of neuro shut down per vet. We had another dog, (b) (6) 18 lbs who had poor/no appetite with diarrhea for a week-symptoms resolved. Both dogs were fed the China produced treats; Puppy Kingdom Chicken Jerky; as well as Duck Sweet Potato , and Cadet duck Jerky. More than 34/4 bag of duck and sweet potato eaten; was just beginning to give chicken jerky, and very minimal duck jerky given related to very dry, and some loose stool when introduced previously.	10	Years	Terrier - Yorkshire	Dog	5.3	Pound

EON-147115	11/2/2013 14:30	Cadet Gourmet Duck Breast	Dog was drinking a lot and urinate frequently. Lost lots of weigh, not eating, in his last 2 to 3 days, did not eat anything. just laid there, look very weak, diarrhea, mucous vomit just before he died. We have been giving it the Costco duck treat by Cadet. We filed report with Costco and they notified the distributor IMS. They said only their treats are not under the FDA warning and their tests are in compliance with good safety standards. I still have some of the treat left and FDA is welcome to test the treat. I don't know if I am the only one with problem with this particular treat but just want to make sure other dogs are not affected by this treat. My wife has taken photo of the dog just after he died.			Poodle - Toy	Dog		
EON-147114	11/2/2013 13:27	Kingdom Pets Chicken Jerky	I provided jerky treats I bought at Costco about 3-4 times a week to the dog over an approximate 24 month period from Jan 2010 to fall/winter of 2011. During this time she experienced a decrease in appetite and lost weight, experienced a significant decrease in energy and ultimately vomited blood several times. I heard a news story around the summer of 2011 about jerky treats from China and discontinued use. After about 1 month of not eating the treats, the dog gained her energy back and stopped vomiting. Her personality returned and she has been healthy and happy ever since.	8	Years	Terrier - West Highland White	Dog	21	Pound

EON-147111	11/2/2013 10:00	Waggin Train Jerky Tenders	<p>(b) (6) was born (b) (6). We purchased him 2-15-03.</p> <p>We got (b) (6) as a puppy and spoiled him rotten. Once we discovered his love for Chicken Jerky, we didn't just buy bags - we bought cases of it from Costco! He was pampered and had no health issues. He visited his vet routinely, got his necessary shots, and was treated like a member of the family.</p> <p>(b) (6) died suddenly (b) (6)</p> <p>The night prior to his passing, I noticed he appeared lethargic and was not himself. He laid his head on my lap and just didn't feel good. I planned to call and take him to the vet first thing in the morning. I never got the chance. We found him dead, lying in his normal spot on the tile by the front door.</p> <p>I couldn't bring myself to order an autopsy but have always know there was something suspicious about it death.</p> <p>I am fully convinced he died from consuming Chinese Chicken Jerky Treats.</p> <p>As luck would have it, I kept a number of (b) (6) things. Believe it or not, one of these items happens to be one of the bags of unopened Waggin Train Jerky Tenders. I would love to give it to you for inspection. It's tagged with a "Best Before 042407" date.</p> <p>A few months later we purchased a new german shepherd puppy, (b) (6) We started him off with Chicken Jerky treats too, giving him some of the bags we still had left from (b) (6) I don't recall how but I heard through the grapevine there was a problem with chinese dog treats. I immediately stopped giving them to (b) (6) and went on the hunt for an all natural, american made chicken treat. I found Tyson Pet, established an account, brought product in for sale in my (b) (6) shop (as well as for (b) (6) and tell everyone I can about the dangers of Chinese treats.</p> <p>I'm so happy to see it's finally getting the attention it deserves, it's just sad so many animals had to get sick and die to make it happen.</p> <p>I will assist in any way possible if it will help get this poison out of our country. Let me know.</p>	4	Years	Shepherd Dog - German	Dog	90	Pound

EON-147110	11/2/2013 9:51	Boots and Barkley chicken wrapped rawhide twists	<p>This particular product is the only common denominator between all the dogs. (b) (6) is my dog, where as (b) (6) (b) (6) and (b) (6) belong to my son. They live next door and often visit me and my dog. They tend to 'clean up' any treats (b) (6) has not completely consumed.</p> <p>One by one the dogs became ill. They were throwing up, and has runny bowels with mucus. Ours ran a fever and became very docile and was not eating. It is very strange for her to not bark. We took her to the vet where she was diagnosed with either salmonella or pancreatitis. The vet kept her for four days for treatment. She was dehydrated and was running a temperature of 102. Since then she has become stable, but some issues have remained. We are treating her with a modified diet and a lot of love.</p> <p>Unfortunately, (b) (6) was the dog who became the most ill from the product because she had the most exposure. (b) (6) had a bad time with it, but recovered completely. The other two dogs were ill briefly, and recovered fully.</p>	8	Years	Spitz - German Pomeranian	Dog	12	Pound
EON-147109	11/2/2013 1:51	Beggin Littles	When given the "treats", the dog would vomit and/or have diarrhea. This continued from the time I gave the dog the treat until I stopped giving the treats - 4 days. I purchased the new bag of treats on 10/24/13 - treats that I have always given this dog. I gave her the first treat on the 25th. She then became sick during the day, I continued giving the treats and she continued vomiting/having diarrhea until I stopped the treats on the 28th. She was sick enough prior to discontinuing the treats that I had considered taking her to the vet, but it was a weekend. Since discontinuing the treats on the 28th, she has not had any symptoms. The treats given were Purina's Beggin Littles. The bar code is 3810053303.	5	Years	Shih Tzu	Dog	11	Pound
EON-147108	11/2/2013 0:45	Authority Chewy Dog Treats - Chicken Jerky	Normally I give (b) (6) a chicken jerky treat once in a while with no adverse affect. However, lately I have been giving it more frequently. Yesterday my husband noticed that her stool was very soft and today it was watery diarrhea. (I see now that the product is made in Thailand.)	4.5	Years	Chihuahua	Dog	7	Pound

EON-147094	11/1/2013 19:15	Dogswell Happy Hips Dog Chews Chicken breast	Dog, who at the time was a 12 year old cocker-spaniel / poodle mixed breed, had dramatic digestive illness after eating chicken jerky treats imported from China (brand: Dogswell Happy Hips Dog Chews, Chicken breast purchased from Drugstore.com). Over the course of 10 days, this dog developed increasingly loose stool for every bowel movement and eventually frequent diarrhea, and then suddenly one day the diarrhea was filled with blood. When we took the dog to the vet for the bloody diarrhea, they said the symptoms were very similar to many dogs that had been eating the chicken jerky treats and they told us to stop feeding those. But by this time the dog was so sick he had to be hospitalized for 4 days and put on IV fluids and medicine. The bill totaled over \$1300.00. The dog recovered normal stool but has been extremely lethargic ever since this incident. These treats must be removed from the market immediately so that no more dogs and unsuspecting families are harmed.	14	Years	Mixed (Dog)	Dog	35	Pound
EON-147093	11/1/2013 19:06	Mellow Mut	My dog died eating dog chicken jerky treats. So I am going sue them. Jerky Chicken Treats for dogs made in China! Mellow Mut name of product for dogs.	7	Years	Poodle (unspecified)	Dog	25	Pound

EON-147089	11/1/2013 16:54	Chicken Jerky Treats	<p>Owner just recently heard about the recall of the chicken jerky treats made in China. She has been feeding these to her dogs for years. Once she heard, she called and we recommended coming in for an exam and blood work + UA. The dogs were not having any clinical signs of illness. One of the dog's bloodwork was completely normal. The other dog, (b) (6) has an elevated BUN and significant proteinuria. A urine protein/creatinine ration was tested, and results were in the very high range. I A/O of outcome and recommend we retest the Urine P/C ratio at least 2 more times at 2-3 week intervals to confirm the findings. The normals are <2, and his value was 6.5. <2 consistently is evidence of glomerular disease accrding to our lab.</p> <p>I felt it incumbant upon me to report this, although I have no previous bloodwork or urinalysis as a baseline to compare it to.</p>	9	Years	Maltese	Dog	9.2	Pound
EON-147088	11/1/2013 16:42	Milo's Kitchen	48 hours ago vomiting started. Initially the pet just had one episodes of vomiting and then four consecutive episodes of vomiting. Yesterday another four episodes of vomiting occurred. Today the pet began having diarrhea. Pet attempts to eat and drink but immediately vomits.	5	Years	Mixed (Dog)	Dog	75	Pound
EON-147087	11/1/2013 16:42	Marketcuts by Dingo	Dog presented for anorexia and vomiting for 48 hours. Bloodwork, xrays, fecal, urinalysis done over several days revealed mild elevation in kidney values, but the thing that really clued us in was glucosuria without an increase in blood sugar. Dog presented with Fanconi like syndrome listed as key in chicken jerky cases. When questioned owner she does frequently treat with chicken jerky.	3	Years	Shih Tzu	Dog	10	Pound
EON-147085	11/1/2013 16:15	SHEP Chicken Jerky Sweet Potato Blend	1 week post ingestion of (SHEP Chicken Jerky Sweet Potato Blend Premium Dog Snacks) the dog began to act lethargic, depressed, not eating well, vomiting, and had no diarrhea. Food consumption was 1/2 of what it normally had been. Upon physical examination the dog appeared to be hydrated, non febrile, and depressed. Abdominal X-rays were performed and no abnormalities were seen. Routine urinalysis was performed and the dog had proteinuria, mild hematuria, and Isostheneria. Serum chemistry revealed mild elevation in ALT and Azotemia. The dog was then placed on IV Lactated Ringers and anti-emetics for approximately 2 days and re-evaluated. Azotemia was resolving but still remained somewhat nauseated. The dog was then discharged on special diet k/d and Azodyl to reduce azotemia. Owner plans to bring the dog back for follow up blood work in 3 days to evaluate azotemia and kidney function. A Urine sample was collected 24 hours post presentation and frozen for analysis by the FDA if so requested.	11	Months	Schnauzer - Miniature	Dog	10.6	Pound

EON-147084	11/1/2013 16:15	Happy Hips Chicken Breast	I purchased Happy Hips Chicken Breast Jerky at the Target on (b) (6) in (b) (6) about a month ago. I fed one piece of the chicken jerky to my 170lb female lab on the afternoon of 10/12/2013. She ingested the jerky without a problem and ate normally that evening. In the middle of the night (about 12 hours after ingesting the jerky) she threw up bile containing small particles of what appeared to be the jerky. I fed her a bland diet for 24 hours and she recovered completely. About two weeks later (I'm unsure of the exact date), I fed her another piece of the jerky, not knowing it was contaminated. She threw up bile again within 12 hours of ingesting the jerky. She threw up bile again the next day several times throughout the day. Again, I fed her a bland diet for 24 hours and she recovered completely. Not until I saw on the news did I realize that the jerky was to blame for the vomiting.	9	Years	Retriever - Labrador	Dog	170	Pound
EON-147083	11/1/2013 15:27	Pet Shoppe Chicken Jerky Premium Chicken Do Treats	One dog started throwing up and the second dog stopped eating. Both were lethargic and just looked sick.	4	Years	Terrier - Boston	Dog	12	Pound
EON-147082	11/1/2013 15:15	Milo's Kitchen Chicken Meatballs Milo's Chicken Jerky	Owner had been giving Milo's Kitchen Chicken and Turkey Jerky treats for about 1 and 1/2 years at 2 per day up until 6 months ago, Dog began getting lethargic about 2 months ago and was presented to me for vomiting on (b) (6) Upon performing labs in was discovred dog was in Kidney Failure and fluid treatment started. This was continued for 1 week and then (b) (6) was retested and found to have only slight improvment. He progressively worsened until becoming completly Oliguric and was euthanized on (b) (6).	5	Years	Sheepdog - Shetland	Dog	32	Pound
EON-147081	11/1/2013 14:51	Beefeaters Rawhide Roll with Chicken Meat	Within 12 hours of eating the rawhide treat, (b) (6) had severe diarrhea and showed signs of lethargy. He later started vomiting and could not keep any food or fluids down. His condition was not improving within 24 hours from when it began, so he was taken to the vet for treatment. He had no other food or treats that was out of the ordinary and had not gotten into any other products/items that would have contributed - he is currently recovering and symptoms seem to be improving gradually.	2	Years	Retriever - Golden	Dog	50.5	Pound
EON-147080	11/1/2013 14:45	Chewy Louie Chicken Jerky	I noticed him stumble, lose his bowels (inside home). He'd never done this. Then he vomited. He could not seem to walk. Bowels were loose and had what looked like mucus. It was late nite early morning so I sat with him a good part of the nite. The next morning he seemed ok.	4	Years	Other Canine/dog	Dog	60	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
EON-147079	11/1/2013 14:45	Purina Busy Bone	Puppy was seen on 10/10/13 and again on 10/31/13 for examination and vaccinations. Other than the parasites detected and treated as described above, the puppy appeared healthy on both exams. Puppy had no reactions to the first set of vaccinations on 10/10/13, and did not appear to have any reaction or illness the evening of the second set. Owners put the puppy in the kennel at bed-time, and found her dead the next morning. She presented for autopsy that morning. Focal dark bruises on the ventral aspect of the tongue indicated probable seizure activity / biting of the tongue. Gastric contents were dried on the nostrils, but the esophagus and trachea were both clear. The stomach was full of liquid digested food, and a large amount of undigested Busy Bone treat that the owners had fed just prior to kenneling the pup. No other possible toxins were seen. Diarrhea was present externally and in the colon. No parasites, foreign body or obstruction was found in the small intestines. Other abdominal organs were grossly normal.	17	Weeks	Retriever - Labrador	Dog	23.2	Pound
EON-147078	11/1/2013 14:42	Mio's Kitchen Jerky	(b) (6) became lethargic and would not eat. She later started trembling. I took her to the vet, they confirmed she had a 104 degree temperature. they ran blood tests and determined she had elevated ALP and white blood cell counts. She was given fluids and antibiotics.	3	Years	Terrier - Jack Russell	Dog	13	Pound
EON-147077	11/1/2013 14:36	WAGGIN Train Chicken jerky treats	Unknowningly I gave Cusack Waggin Train jerky treats prior to 6 months of age, I purchased these treats at my local Sam's club. When I went in to have him neutered at 6 months old his pre-surgery blood work indicated he was in kidney failure, liver failure, and had pancreatitis. He was not neutered that day and he was given antibiotics and blood was drawn every 2 weeks until they could neuter him safely 3 months later. We have suffered multiple occurrences of hepatitis since. I switched veterinarians for a different perspective after my previous vet told me "there was nothing more he could do" for my dog. My dog has been on antibiotics,steroids,and drugs such as Denamarin in the last 3 years from the effects of those treats. For now he is better, but I sit in dread and wait for another flare up. All his vet records are available.	4	Years	Chihuahua	Dog	6	Pound
EON-147073	11/1/2013 14:27	Nudges wholesome dog treats premium jerky cuts-made with real chicken	(b) (6) developed a GI bleed after giving her a piece of Jerky. EON-147064	11/1/2013 14:00	Dogswell Vitality Chicken Breast with Flaxseen and Vitamins	Owner, (b) (6) purchased Dogswell Vitality Chicken Breast Dog Treats on September 23, 2013 from PetFoodDirect. She began giving the treats to (b) (6) (b) (6) was evaluated on October 16, 2013 for anorexia of 5 days duration, increased thirst, lethargy, and shaking. Physical examination showed mild dehydration, dental disease, decreased proprioception, and weakness. She was also febrile at 104.7F. Laboratory results showed elevated ALT, ALKP, decreased BUN, and mild hyponatremia. There were normal amounts of WBC, RBC, and platelets. Radiographs showed a slightly increased size to the liver and the spleen, as well as a hazy area around the pancreas. Kidneys appeared normal. Cardiac silhouette was slightly rounded but normal for breed conformation. Lungs clear. Spine normal. Hips showed left femoral neck thickening, indicating possible Legge-Perthes disease. Canine pancreatitis snap test (by Idexx) was strongly abnormal. Leptospirosis testing done and came back negative. (b) (6) was treated with doxycycline and Penicillin G.	6	Years	Chihuahua	Dog	11.7	Pound
EON-147050	11/1/2013 13:09	Science Diet Adult Advanced Fitness Small Bites	(b) (6) started frantically eating grass in the morning and hesitating before eating his food. He then began vomiting.	4	Years	Pug	Dog	15	Pound
EON-147049	11/1/2013 13:09	eukanuba maintenance, Milk Bone	<p>I have been feeding my dog Eukanuba Maintenance & Milk Bones for the past 12 years. In September 2013, she developed seizures several times a day. Upon examination from the vet, a cause could not be identified without extensive testing of the animal. Speculation is that it is a brain tumor, since her blood levels came back normal. Her seizures became worse and was eventually hospitalized for several days.</p> <p>Upon returning from the hospital, we started her on a new pet food diet. Her seizures never returned, until recently. When we came back from vacation, we accidentally gave her the pet food in question from Eukanuba & Milk Bones. Two days after, her seizures returned, even though she is on phenobarbital medication. Immediately, we removed Eukanuba & Milk Bones from her diet, and the seizures went away.</p> <p>I have called Eukanuba twice, and they have indicated that the food was fine and they were not showing any other complaints from my region.</p>	12	Years	Beagle	Dog	26	Pound

EON-147018	10/31/2013 20:15	happy hips	<p>(b) (6) had lost 1.5 lbs (8%), was taking in a lot of water, and was very lethargic. My husband and I felt that it was most likely his age; however, his Senior profile blood work at his yearly check up indicated that there may be a problem with his liver. He had to have a bile acid test, which confirmed that there was a problem. (b) (6), his veterinarian, said he needed a liver biopsy and an ultrasound. The evening of his biopsy I was watching the news (Oct. 22nd) when a story of jerky treats for dogs made in China may be making dogs sick. The treats that he had been given for the past 6 months were in fact made in China (Dogswell "Happy Hips" Jerky Treats). When I spoke to my doctor the following day, she suggested to stop feeding him the treats and to report (b) (6) illness to the FDA. She indicated that dogs have had kidney problems, and not liver problems, but to stop the treats anyway. Of course, we have done that.</p> <p>His tests indicated that there is a problem with his liver ("lobular dysplasia"). He is now on a Hills L/D Diet for Liver health and is on a medication. We have spent almost \$1000 on tests, medication and special food. His health seems to have improved in the past few weeks as he has more energy and isn't drinking an excessive amount of water. He still seems very thin, but is eating well.</p>	10.7	Years	Bichon Frise	Dog	17.1	Pound

EON-146955	10/31/2013 14:39	Cadet Gourmet Duck Breast, Milo's Kitchen home-style dog treats Chicken Meatballs	Owner began feeding a new variety of treats around the middle of October. Dog began vomiting off and on until presentation (b) (6) Owner had noted polydipsia and polyuria at that time as well as decreased appetite (would not eat dog food, would eat small pieces from owner's food and cat food). Dog was lethargic at time of presentation. Mild Pyrexia (T=102.6). BCS 4/9. CBC - WNL, Chemistry showed Azotemia (BUN 105 mg/dL, Creat 4.0 mg/dL and Phos 10.8mg/dL) as well as ALT and ALKP changes that had been previously noted due to Cushing's dz (ALT 347 U/L and ALKP 455 U/L). Urinalysis showed USG of 1.035, Neg protien, occ WBC and RBC, scant cocci (free catch sample). Dog was referred to 24hr facility for overnight IV fluids. Mild improvement was seen in the blood values, but no increase in appetite. Transferred back to our clinic for IV fluids (b) (6). At discharge (b) (6) values were BUN 70mg/dL, Creat 3.2mg/dL, and Phos 7.7 mg/dL. Dog returned for recheck (b) (6) - no change in appetite or behaviour, still lethargic and inappetent. (b) (6) values BUN 106 mg/dL, Creat 4.3 mg/dL, and Phos. 11.7 mg/dL. Dog was placed back on intensive IV fluids during the day and given SQ fluids at night while home. Hospitalized (b) (6) Rechecked bloodwork (b) (6) - BUN >130 mg/dL, Creat >10 mg/dL, Phos 7.9 mg/ dL. Owner elected euthanasia at that point. Note: Blood work was done 8/28/2013 at time of Cushing's tx recheck which showed BUN 38 mg/dL, Creat 1.0 mg/dL, Phos 5.8 mg/dL. ACTH test done at the same time was normal.	15	Years	Spaniel - Cocker American	Dog	37.8	Pound

EON-146898	10/31/2013 13:51	Waggin' Train Big Blast Pork Skin Twists with Chicken Liver Center, Earthborn Holistic Primitive Natural Grain-Free Dog Food	Dog was brought to vet on 10/01/13 with poor appetite. Owner was concerned as other pet, FDA ICSR ID 1032465, had already become ill. This report is also related to report FDA ICSR ID 1032443. Dog's temperature was slightly elevated: 102.3 degrees. Lab reports on blood samples are attached.	1	Years	Shih Tzu	Dog	11	Pound
EON-146892	10/31/2013 13:45	MASTERS BEST FRIEND All Natural Duck Sticks	Started giving our puppy an occassional dog treat (Duck Sticks). One every 2nd approx. Our puppy became unusually lithargic, started to drink a lot of water and was urinating much more than usual. About 2 weeks later he started to vomit and had diarrhea. I read an article in the paper about dog treats made in China making hundreds of dogs ill and many were dying. I read the product package and it was made in China. My family discontinued giving the implicated treats to the dog and he started to improve in health and back to normal puppy beviour in about 5 days.	5	Months	Retriever - Curly-coated	Dog	17	Kilogram
EON-146891	10/31/2013 13:45	Louisiana alligator jerky	<p>purchase Louisiana alligator jerky 42oz item # 702884 Delco Corp Laguna Niguel CA 92677, from Sam's club on October 03, 2013</p> <p>used up balance of treats in house and began feeding (b) (6) treats around October 12 2013 small pieces of treats</p> <p>(b) (6) began to vomit and have bloody stool discharges on October 14, 2013. He was projecting from mouth and rectum. took him to vet on October 14, 2013. the vet ran blood tests and diagnosed him with acute pancreanitis and inflamed organs</p> <p>was kept for 2 nights at vets and was watch and was attached to and IV for two and a half days. Was released at about 8 PM on October 16, 2013. We were instructed to only feed him rice and chicken or id dog feed by vet and be very good in giving him the medicine. Was given two prescriptions to administer to him</p> <p>(b) (6) returned for a check up on October 23, 2013 at that visit he was given another two week supply of two prescriptions.</p> <p>(b) (6) seems to be doing well now but need to keep giving prescriptions and special diet.</p>	13	Years	Maltese	Dog	8	Pound

EON-146855	10/31/2013 13:06	DOGSWELL HAPPY HIPS DUCK BREAST GLUCOSAMINE & CHONDROITIN	<p>Clinically, patient had been doing great. Was energetic and acting normally the day before the incident. Owner began feeding "Happy Hips- Duck breast" jerky treats 2-3 days before incident. Patient presented with history of vomiting for 12 hours, Bun 113 mg/dl, Creatinine too high to measure, BG of >650 mg/dl. Phos >16.1 mg/dl. Ca++ 5.5 mg/dl. Tbili 1.2 mg/dl, WBC 17k, Na 120, K 6.7. No ketones in urine. All other parameters normal.</p> <p>Was given regular insulin and hospitalized on IV fluids. 2 mg Dexamethasone given IV and, ACTH stim planned for next day. BG never normalized, patient passed within 8 hours of hospitalization. Obviously, could be from an unregulated diabetic / and/or also became addisonian, but I figured I would report it.</p>	11	Years	Terrier - Yorkshire	Dog	7.8	Pound
EON-146854	10/31/2013 13:06	Dingo Treats/ Waggontails/Everpet Treats several different brands bought from Dollar General	(b) (6) was perfectly fine and out of the blue on a tuesday started drinking EXCESSIVE amounts of water and urinating (thought she had UTI)and not eating My vet was on vacation so I waited until friday at that point she - took her to an Emergency vet and they ran blood work and all her numbers were off the chart - they wanted me to put her sleep at that point -as they thought it was Kidney failure. I wanted to wait to talk to my vet - My vet came out twice on sunday to my house and checked her out - tried predisone and tried to feed her AD food she wouldn't eat, vomiting excessively, lathargic, and weak. She did not improve, he took her in and gave her fluids and by thursday she was not any better and no signs that she would improve so the decision was made to put her to sleep.	10	Years	Pinscher - Miniature	Dog	12	Pound

EON-146811	10/31/2013 10:36	Catswell VITAKITTY Chicken Breast with Flaxseed & Vitamins	<p>My dog was a healthy, active lab/pit bull mix who exercised with me every day, several times a day. I occasionally gave her Dogswell "Happy Hips" jerky treats. I also have a cat who I bought VITAKITTY chicken breast jerky treats for, but since he didn't eat them, I recently gave some to my dog. I didn't make a connection to her symptoms until after reading about the recent reports of jerky contamination and deaths in dogs. On October 3, 2013, my dog began experiencing symptoms of vomiting, diarrhea, increased water consumption and urination for several days and I brought her to the emergency vet where she received IV fluids and antibiotics for 3 days. Unfortunately, her condition did not improve and she suffered kidney failure, and subsequently I had to make the decision to put her to sleep.</p> <p>The bag of treats that I fed to (b) (6) most recently are Catswell VITAKITTY Chicken Breast marked "Best Before 04/07/2013" with a code SEW11CH101702/03c</p>	6.5	Years	Mixed (Dog)	Dog	55	Pound
EON-146810	10/31/2013 10:21	Pupperoni treats	I have two English pointers 5 year old in go health. they eat NutriSource dog food and Milk Bone treats and Pupperoni treats. we purchase a bag of the pupperoni treats on 10-19-13 by the 10-25-13 the first dog started to get sick with throwing up and diarrhea for 3 days. than the second dog started in with the same issues had to take her to the Vet do to she would not eat rice dinner or any thing else. with reviewing with Vet they feel with having both dogs sick and the treats where the factor. the second dog is on stomach pills and both are still on rice feeding. I guest I'm lucky they only got one treat per moning						
EON-146808	10/31/2013 9:30	HARTZ OINKIES PIG SKIN TWISTS ORIGNIAL REAL SMOKED FLAVOR	(b) (6) LOST CONTROL OF HER BLADDER. 			<p>type. There is no history of any ingestion or access to topical product. When I requested dietary history, I discovered that she had been feeding these treats:</p> <p>--</p> <p>(b) (6) history with eating chicken jerky treats:</p> <p>For the record, (b) (6) loves the chicken jerky treats and has been given many different varieties over the past several years. Her consumption of the treats used to be much higher - 6 to 8 a day - but over the past 3 years, the number of ANY treats she gets every day has diminished to about 2 or 3.</p> <p>I would have to say that the variety she got most often would be Waggin Train and then next most often would probably be Kingdom Pets Chicken Jerky from Costco and Colorado Naturals brand Chicken Jerky and Duck Jerky from Menards.</p> <p>She has also had Dingo Jerky Treats, Dogs Wells Chicken Jerky (although not very often) and she has recently (in August) had their Salmon Jerky. I checked the packaging on several of these today when I was at the store and some are made in China and some are made in the USA.</p> <p>Over the past two months she has had Milo's Chicken Jerky and when that bag ran out I bought her the Milo's Beef Jerky.</p> <p>She has always been given the jerky in full pieces. Again, her consumption has varied over the years but they have been a frequent part of her diet. Sometimes several a day, every day and sometimes a few a week.</p> <p>--</p>						
			<p>I am suspicious of the jerky treats as a cause of her rising renal/liver values.</p>

EON-146799	10/30/2013 22:45	Waggin Train Chicken jerky	<p>First noticed using Waggin Train Chicken Jerky- Dog developed numerous rashes over torso, and started scratching them. Removed the jerky from his diet and the rashes went away within a few days. Tried other brands (unable to remember specifics), but did notice that the problem came back with any brand made in China. We verified this by eliminating all Chinese brand treats from his diet and waited for the rash to go away. Then, once gone, reintroduced the treats to find the rash back within two days. We've had no problems since eliminating the Chinese treats altogether.</p> <p>The dog did seem to love the taste of them though, and has not been as interested in other brands of snacks.</p> <p>Dates listed below are broad estimates- entering the report now due to NPR article highlighting that this was not isolated with our dog alone.</p>	3	Years	Mixed (Dog)	Dog	60	Pound

EON-146787	10/30/2013 19:09	Waggin Train Wholesome Duck Jerky Tenders	Patient was seen at her regular veterinary office on Wed (b) (6) for inappetence and decreased water intake. The veterinarian found her to be afebrile at 101.4, 16.5 lbs, tender abdomen and with a history of eating people food. Patient was treated for suspected pancreatitis with metoclopramide. Patient presented to your office for evaluation (b) (6) as she was not doing any better. At this time her temperature was 99.7 and weight was 16 lbs. Patient was found to be dehydrated and uncomfortable in cranial abdomen. Owner elected to treat patient medically as an outpatient and declined diagnostics. Patient was treated with Subcutaneous fluids, Cerenia, famotidine, and ampicillin. Patient decompensated that day and returned for hospitalization and diagnostics. Radiographs showed significant amount of radiopaque material (bone) material throughout intestines and stomach. Signifcant stool in colon. Patient now painful with the mouth, drooling. Chemistry profile showed mild increase in ALT. CBC = normal and UA = WNL and snap CPL test was normal. Concerned patient had severe gastroenteritis due to ingestine of bones. Owner approved hospitalization. Patient received intravenous fluid support, cefazolin, and buprenexx for pain. The next day the patient was more comfortable and ambulating, had passed dark stool overnight. That morning also started to show abnormal neuro behavior (falling to left) Were able to do an oral exam and found an ulcer at base of tongue. Continued with hospitalized support. Patient decompensated in hospital and suffered cardiopulmonary arrest. Patient did not respond to resuccitation. This week 10/23/13 owner requested a report be submitted as she had eaten the recalled treats that the FDA issued a report on: Jerky Treats	6	Years	Dachshund - Miniature	Dog	16	Pound

EON-146778	10/30/2013 17:00	I really don't recall. You could see the product through the packaging. They are hard and stick like.	<p>(b) (6) has arthritis, but was not on any medication. Gave her a jerky type stick treat I had purchased from Pet Smart in (b) (6) around approximately 10 AM in the morning - she gobbled it rather eagerly... only chewed a couple of times (I remember it well because she almost took my finger with it). She was normal and active all day. Feed her a measured cup of ProPlan Large Breed for dinner around 5:00 PM. She ate and drank normally.</p> <p>I don't have her vet record in front of me to be exact, but around 7:00 (ish) she kept wanting to go out. She seemed to be straining to clear her bowels, several times. Then she started vomiting at least twice until her stomach was clear. Continued to retch and strain her bowels. This went on for a couple of hours... the suddenness and intensity really caught our attention. We have never seen her sick before, never like that. Finally when she did poop, initially it was loose and foul. By that time it was dark.... could not see the color or consistency. I was somewhat relieved until she started laying down in the furthest corner of the yard, under a tree and would not come in when I called her. I had to carry her. She appeared to be weak. p.s. I put a call into our vet and while I waited she pooped again, this time it was like a red jelly-like substance. That was it for me..... I collected some of it in a clean ziploc bag, and took her directly into our local animal clinic as an emergency. They immediately started an IV and kept her a couple of days. Blood work, xrays and a GI test was done... Vet said it was as if she had been poisoned or ate something toxic. I have two other larger dogs, and they were fine.... but I don't specifically recall giving them the same treat that day. (Sometimes I mix it up because there is always an odd one left over). However, I do distinctly remember recalling to the clinic staff everything I saw her eat or drink, including that jerky stick. (FYI.. I am a EH Sanitarian in (b) (6))</p> <p>She survived. Never had another episode... but since then we only buy treats made in North or South America.</p> <p>Note: The dates below are approximate, it occurred in the fall of 2011, she was very ill for about 4 or 5 days. Resumed normal diet after about a month.</p>	7	Years	Mixed (Dog)	Dog	50	Pound

EON-146775	10/30/2013 16:36	Milo's Chicken Jerky	<p>I adopted a black lab/greyhound mix dog from my sister last December. Her name is (b) (6) and she was 3 months old when I got her. She is a gentle sweet dog with no health issues. She had been to the vet and had all of her shots/rabies vaccine and was spayed. During the end of April/ beginning of May I bought a large bag of Milo's Chicken Jerky from BJ's Wholesale club in (b) (6) and began giving her the "treats". After a few days she became sick, vomiting, diarrhea and tired. This came and went for a few weeks (I did not give her treats everyday). One day she was vomiting really bad and she collapsed on the floor. I rushed her to (b) (6) (b) (6) and they took her in right away. She was still vomiting and very Lethargic. They took xrays and did blood workup on her. They found she had an obstruction in her intestine and that they needed to do emergency surgery or she would die. They did the surgery and recovered the obstruction, removed part of her intestine and (b) (6) spent 2 days in ICU. The hospital could not identify the object and neither could I.</p> <p>I was on Facebook the other day and my friend posted an article on the Milo's chicken jerky treats and how dogs were dying from eating them. I went on the internet and did some research myself and found that (b) (6) had all of the same symptoms as the other dogs that died or were really sick with gastrointestinal issues. I almost lost Jaco that night and her surgery cost me thousands of dollars. (b) (6) is doing well today and she has never had any treats since (I threw them away before she came home from the hospital). I dont know if the two are related but it seems very coincidental. Please let me know your thoughts.</p>	2	Years	Mixed (Dog)	Dog	50	Pound
EON-146774	10/30/2013 16:36	Cadet Duck Breast	Gave her 4 Cadet Duck Breast Treats Lot # 251Y Exp. 05-24-2015. In about 2 hours she began violently vomiting. She vomited 8 times. I let it continue believing that it was best to get it out of her system. She was tired but okay after vomiting. My vet said to keep an eye on her and bring her in if she got worse. She did not except for fatigue.	2	Years	Foxhound - American	Dog	60	Pound

EON-146773	10/30/2013 16:30	EXER-HIDES Beefhide Mini Bones artificially chicken flavored	I purchased these bones as I have in the past and gave them to all my dogs as treats. A day later (b) (6) became very ill, not himself seemed to be stomach issues. I took him to the vet and the only thing they could find was his liver levels were elevated and treated him for an intestinal/stomach infection with 3 different antibiotics. Two days later one of the other dogs got sick as well except this one had bloody diarrhea and another one of the males two days after her got sick as well. She was treated the same as the first and was better in 24 hours, (b) (6) however took about 1 week to get back to normal. The third was also treated. Not knowing what the cause was at the time once they both finished their meds, I again gave them the same treats and both got sick right away the next day. I was speaking to my mother who informed me about the possibility of bad dog treats from China. This brand is made in China.	3	Years	Chihuahua	Dog	5	Pound
EON-146772	10/30/2013 16:30	Happy Hips	When giving her this product, after an hour later, she would vomit and have diarrhea and drink an unusual amount of water	6	Years	Retriever - Labrador	Dog		
EON-146770	10/30/2013 16:09	HAPPY HIPS Salmon Jerky (DOSWELL)	I recently started to give my 14 year old Standard Poodle your product Happy Hips one strip of the Salmon Jerky per day, as she appears to have some arthritis in her hips. There was no noticeable reaction to the first bag of the product; however when I gave her product from the second bag she developed severe diarrhea and had to be hospitalized. She survived and I began adding back treats and food she ate before becoming sick, being careful to add only one per every two or three days. The day I added the Happy Hips she seemed to have some digestive discomfort, (gurgling) but I gave her a Happy Hips strip the next day with the result; significant diarrhea that night. I don't know how this will turn out, she seems comfortable today and I am following my vets orders on future feeding. Be assured, she will never have any Happy Hips in her diet again.	14	Years	Poodle - Standard	Dog	40	Pound

EON-146765	10/30/2013 15:24	Waggin' Train Big Blast Pork Skin Twists with Chicken Liver Center, Earthborn Holistic Primitive Natural Grain-Free Dog Food	Loss of appetite and decreased activity were the first sign of concern. Vomiting began on 9/28/2013. Visit to the vet was on 9/29/13. Lab work was done (attached) and IV hydration, antibiotics and anti-nausea medication were initiated. Return to vet was on 10/1/13 to check progress. Additional lab work was done at that time (attached). 2 of the other ill dogs were treated by the same veterinarian clinic with one deceased and one recovered. Other 3 did not exhibit as severe of symptoms. Separate reports will be filed for each of these. Pet owner runs a very well-known and respected breeding facility (Sunny Day Puppies) and all dogs are well cared for, regularly visit their veterinarian, and logs are kept on the dogs by the owner. Dog breeds at the facility all run in the same kennel and all of the Shi Tzus and 1 of the poodles (the least affected) were the only ones affected though all breeds had access to the treats. The other breeds at the kennel are Yorkshire Terrier, Cairn Terrier, and Lhasa Apsa.	4	Years	Shih Tzu	Dog	10	Pound
EON-146764	10/30/2013 15:15	Canyon Creek Chicken Jerky Treats	I had been feeding both my dogs the chicken jerky treats as a daily treat/supplement to the kibble. They would have one or two a day. After Christmas last year, I opened a new package and the same day I began feeding these treats, the yellow lab had a seizure. A blood test at the vet's office revealed that his creatinine was over 7.0 and his BUN was 120. The dog was treated with intravenous fluids for two days, during which the numbers did not go down. This was when we found out about the potential problems with the treats. We took (b) (6) home, expecting that he would die soon. However, I modified his diet, giving him homemade food instead of manufactured, and he lasted until September, when he became very anorexic. It was also obvious that he was experiencing pain, and so we put him to sleep.	9	Years	Retriever (unspecified)	Dog	52	Pound
EON-146763	10/30/2013 14:54	Cadet Gourmet Duck Breast	Dog was given Cadet Duck Jerky. Within hours the dog was lethargic and would not get up. For the next two days it would not eat or drink. The dog was taken to the vet, and bloodwork was done. Dog is now on dialysis for kidney and liver malfunction.			Collie - Border	Dog

EON-146761	10/30/2013 14:15	American Kennel Club Duck Jerky Treats, Dingo American Made Market Cuts Chicken Jerky	On Sept 27, 2013 (b) (6) presented with anorexia but no tests were performed. On Oct 3, 2013 (b) (6) was still anorexic and had developed vomiting and was PU/PD. On presentation she was very depressed and was hospitalized for supportive care and testing. Test results showed a Fanconi-like syndrome with glucosuria with normal blood glucose, acidosis, hyponatremia, hypokalemia, and had proteinuria with dilute urine. Leptospirosis test was negative. (b) (6) had a history of eating duck and chicken jerky treats. (b) (6) was discharged from hospital after 3 days of supportive care and started on supplements and antibiotics. On Oct 10, 2013 follow up tests indicated mild azotemia, hypophosphatemia, glucosuria with normal blood glucose, proteinuria. There was a slight improvement in anorexia at that time. On Oct 17, 2013 follow up urinalysis showed continued glucosuria and proteinuria. Owner reported a slight improvement again in anorexia but still vomiting daily.	3	Years	Terrier (unspecified)	Dog	8.5	Pound

EON-146760	10/30/2013 14:15	jerky treats	Our dog started getting sick a couple weeks prior to (b) (6). I went away out of town for 3 days for work and while I was gone she got really sick, couldn't eat, vomiting excessively, urinating everywhere, shaking and lost weight dramatically. my husband called me the evening after I left and I spoke with the vet through an emergency call..i was 3 hours away..the next evening my husband met me at the vets office in (b) (6) with our dog..i couldn't believe how much more sick she was..she could barely stand but did so for me with assistance..could not be picked up as it hurt her to touch her and she would cry out..then she would urge but nothing would come up as she had not eaten for over 2 days...she had lost so much weight..the vet got a urine sample and blood work..it came back the her kidney's were in failure..high blood glucose levels...back legs were very weak..she had tendersness in stoach area and there was a lump of some sort in her pancreas. we did tell the vet she hadn't been feeling well for awhile but we chalked it up to she was getting older and didn't exercise but loved to lay around and eat. the vet said she was suffering and failing fast and it helped make my decision easier to put her to sleep and not have her suffer..i still thought though that she had failed fast and had I done the right thing.....a few days ago was the first time I heard of those treats jerky and the issues surrounding them..I cant help but be inclined to believe that this happened to her as we did buy her jerky treats before and she loved them..I cant remember when I purchased them but it was a a couple weeks or more before she passed and I am not sure where I purchased them. I do know though that our local co-op store in baie verte sells this brand and I have told them about this problem that is happening but they are still selling them..i checked today. I wanted to tell my story as I don't know if shampie was made sick because of these treats or not for sure. but I do know she had them and she got really sick fast..so thought it best if I spoke up. thank you, (b) (6)	12	Years	Mixed (Dog)	Dog	70	Pound

EON-146757	10/30/2013 13:54	Happy Hips Chicken Breast & Vitality Chicken Breast - Dogwell	<p>Had been giving (b) (6) one Dogwell Vitality & Happy Hips Chicken Jerky each morning, for the past year (type varies throughout the year). Around Feb / May 2013 I went to buy more at Petco and noticed all the Dogwell Vitality Jerky products had been pulled. Talked to store person and they said no worries, probably pulled for packaging change, so I bought a different type of Chicken Jerky (I can't remember which brand). Sometime in June / July, I bought Dogwell Happy Hips, and began giving to her each AM again. (Her treat for taking her medicine).</p> <p>August 2013, (b) (6) was losing her appetite, she had diarrhea & nausea. She also had weird dark colored solid dropping coming from her bottom (it was weird, because she had diarrhea, yet this was solid).</p> <p>9/ 9/ 2013, she had 103.7 fever (19.4 lb weight at the time). Doctor gave stuff to help with fever and had blood taken for testing. Liver count high (ALT 224), but, considered normal because of her Liver disease. BUN 13 / Creatine 22 (last blood test taken 9/13/2013 ALT 460 / BUN 11 / Creatine 2.2)</p> <p>9/13/2013 took (b) (6) back in, she was still having diarrhea / nausea / fever 103.9 / and still not wanting to eat. Doctor took stool sample (next day results showed no parasites) and did anal glands.</p> <p>9/19/2013 Took (b) (6) to another hospital since previous Vet said (b) (6) was so sick; she needed to see a specialist. Took her (b) (6) , vet gave her Metronidazole & Tramadol, thinking maybe she had an infection. (Weight 17 lbs)</p> <p>9/25/2013 did an ultrasound and it showed there were visual problems with her Pancreas and said she may have pancreatitis. (b) (6) stayed several days, with Fluids flushing her system via IV.</p> <p>10/3/2013 (b) (6) still not eating / diarrhea, took her back to (b) (6) Blood works showed BUN 123 / Creatine 5.9 / ALT 210. Doctor said she has Kidney Disease (note, that on 9/9/2013 her BUN was only 11 & her Creatine was only 2.2)</p>	10	Years	Mixed (Dog)	Dog	14.7	Pound

			<p>10/4/2013 Urine showed Protein 2+ Occult Blood 3+</p> <p>10/10/2013 After staying 8 days / 7 nights at (b) (6), with fluid IV flushing out her Kidney, she now weighed 15lbs, her blood results showed BUN 41 / Creatine 2.6 / ALT 106</p> <p>As of today, 10/30/2013, she gets daily fluid IV and medication. Her weight as of 10/29/2013 14.7lbs. She is eating a bit, but has a long way to go. What is left of her Kidney is trying to hold on strong. I monitor her Phosphorous intake, protein and fat. I can't believe all this happened to (b) (6) just because of age, something set her system to go from Normal (she has been doing great with her Liver Disease) to almost dying. I no longer give her any Chicken Jerky and pray, she will stay with me for a long time.</p>						
EON-146754	10/30/2013 13:45	Pet Shoppe Duck Jerky Treats	After eating Pet shoppe Duck Jerky Treats, she began having diarrhea with a lot of mucous in it. This went on for a couple days and then I took her to the Vet. They examined her but couldn't find anything wrong. Gave her some medicine to help clear up the diarrhea. At first, I didn't associate it with the treats so when she got better, I gave her the treats again and the same thing happened. They gave me enough meds to last in case it happened again so I gave them to her and it cleared up again. I threw the treats away.	3	Years	Other Canine/dog	Dog	14	Pound
EON-146751	10/30/2013 13:24	Pup-Peroni Lean Beef Flavor, Purina Beggin Littles Bacon Flavor	Over the past month my dog has been hospitalized on three separate occasions. His symptoms includes nausea, bloody Vomit, bloody diarrhea, and extreme fatigue. I have had over \$1100.00 in vet bills so far. He has had numerous blood tests and even tested positive for Pancreatitis. He has been on numerous medications and had to be put on IV fluids for severe dehydration. Even now, after finishing his third round of medications he is still not back completely healthy yet. When i heard about the dog treat warnings i was shocked to find one web site with the name of two of the same brand treats that my dog has consumed throughout this difficult time. they are "Pup-peroni lean beef flavor dog snacks by Del Monte and Beggin Littles bacon flavor treats by Purina. Those are the only things that my dog consumed besides the vet prescribed dog food.	2	Years	Shih Tzu	Dog	10	Pound

EON-146695	10/30/2013 2:39	Wagon Train Yam Good, Wagon Train Chik n bisquits	We began feeding treats several times a day. Mainly the Wagon Train sweet potato and jerky. She began to vomit, became lethargic, difficulty with urination, and ended up having kidney issues. This caused her to be at the vets and get treated on multiple occasions. Her symptoms would clear up and then mysteriously they would return once she was back on foods and getting treats and we would be back at the vet. After several occurrences we checked into the treats online and learned that dogs were reacting similarly and we stopped giving them to her. It was too late she died shortly afterwards. Dates below are estimates as I don't have the vet records and just saw this on facebook. Glad someone is finally looking into this.	6	Years	Mixed (Dog)	Dog	18	Pound
EON-146694	10/29/2013 23:21	Valu Time Rawhide Dog Chews	In 2011, over the course of 3 days our dog went from being healthy and active to lethargic, unable to eat or drink and jaundiced. We thought at first she just wasn't feeling well, but by the second day, it was clear something was terribly wrong. By the morning of the 3rd day, the vet told us he suspected her kidneys were shutting down. (b) (6) couldn't move and was vomiting bile. We made the decision to euthanize that day, as she was in very bad shape. We had always fed her the Valu Time treats that we bought at our local Hy Vee grocery store because they were inexpensive and she liked them. She was extremely active and from what we and our vet could tell, she was in perfect health. The sudden onset of her sickness made us believe then and even more so now, that it was either her food (Benefil) or her treats that caused her death.	10	Years	Mixed (Dog)	Dog	40	Pound
EON-146693	10/29/2013 22:54	Kingdom Pets - Chicken Jerkey	Several episodes did not realize it could be the treats. For a few she Would stop eating, get lethargic for several days. EON-146685	10/29/2013 20:54	Loving Pets Gourmet All natural premium chicken breast	Gave my pet a chicken jerky treat and noticed the next day she was lethargic and had a loss of appetite. The following day she vomited 6 times throughout the day, was not eating, lethargic and she had diarrhea. The next day she vomited 2x that morning. I then decided to take her for an emergency visit the veterinarian. After some diagnostic test were performed I was told she had a "leaky kidney." This diagnosis, along with her other symptoms, was consists with what had been reported after having jerky treats made in China .	6.5	Years	Bichon Frise	Dog	13	Pound
EON-146683	10/29/2013 20:21	Twistix	I gave my dog a Twistix brand, good for oral hygiene, treat to go with his morning meal. He ate only the treat and a few hours later he started having a problem that seemed like convulsions. It wasn't the first time he had a reaction after eating the treat. It seemed like acid reflux before. The last event was enough for me to decide file this report as a caution.	3	Years	Shih Tzu	Dog	25	Pound
EON-146682	10/29/2013 20:09	CADET GOURMET DUCK BREAST	I had been feeding my dog this brand of treats for about 6 months. This newest bag I've had for only a few weeks. I noticed about a week ago some unusually offensive flatulence from my dog. Then a couple days later she had some slimy mucus like film in her stool on and off, and although it didn't worry me then, I did notice her drinking more water than usual. Yesterday morning she seemed okay. My neighbor walks my dog for me around noon, then gives her a treat or two. When I got home she had a very high fever, would not eat, and would barely walk. She also trembled on and off, and her eyes would want to shut as she would almost fall over from sitting. I gave her half an asprin and an hour later she stopped trembling and her fever dropped a bit. The next morning I noticed she had vomitted on the floor, and I took her to the vet right away. They could not figure out what was wrong, but gave her a shot for the nausea, and one for antibiotics as well as a week's worth of pills to give her twice a day. I came home from work today, and she is still extremely lethargic (she is normally extremely high energy) and miserable. She is also drueling, which I've never seen her do. I noticed a couple spots of diareah on the floor that were very dark and had a slimy consistancy. We walked outsided slowly, and she was able to poop which mostly diareah then the second time was mostly blood. She seems to be getting better this evening, but I will call the vet again in the morning.	2	Years	Mixed (Dog)	Dog	35	Pound

EON-146681	10/29/2013 20:09	Dreambone	I purchased Dreambone (Made In China) from Target in (b) (6). And gave one to my dog on Wednesday October 23. He began vomiting that afternoon and continued vomiting the next day. He couldn't eat or drink and became very lethargic. On Friday I took him to the vet ((b) (6)). He was given anti nausea meds but continued vomiting and was taken back to the vet on Saturday. He was given stronger anti nausea and subcutaneous fluids for dehydration. On Sunday he still was digressing so had to go to emergency clinic and was placed on IV treatment and X-ray and test confirming acute pancreatitis due to jerky treat. Picked him up Monday and had to go back to reg vet for continued IV therapy. Still vomiting so ultrasound was done to look for obstruction and signs of internal organ damage. Internal organs appear fine with some visible inflammation to the pancreas. (b) (6) is home but is requiring 24hr care, special pain and nausea meds. Hope to start bland low-fat diet soon.	9	Years	Terrier - Cairn	Dog	14	Pound
EON-146680	10/29/2013 20:00	Foster Farms 99% Fat Free Chicken Breasts	Upon feeding my dogs Foster Farms chicken breasts that I purchased frozen from a COSTCO store, but had cooked before feeding it to them, both dogs got diarrhea, but (b) (6) case became extreme and eventually he was only eliminating nothing but blood. I took him to an urgent vet appointment, where he was treated with subcutaneous fluids and Metronidazole 500mg tablets twice a day for a week. I was also instructed to feed him only chicken and rice, since we had not suspected the chicken was an issue. Then I read about the salmonella-tainted chicken issue in the news, and immediately stopped feeding the dogs any chicken. (b) (6) required an additional course of Metronidazole 500mg tablets twice a day for another two weeks before symptoms finally were resolved.	7	Years	Collie - Border	Dog	57	Pound
EON-146679	10/29/2013 20:00	Pet Shoppe - Chicken Jerky	Routine bloodwork prior to a requested dental cleaning showed elevated liver values. Dog was vomiting. Liver supplements has been started and numbers continue to increase slightly. Now stopped treats. Vomiting has subsided.	12	Years	Schnauzer - Miniature	Dog	13	Pound
EON-146678	10/29/2013 19:51	Laura Lynn Winner's Best Premium cat food	Cat and dog started vomiting after eating this product. Cats fed product first, they did vomit but I wasn't sure if it was product, it was when I later fed product to dog and he began to vomit that I realized it must be the product causing this. No visible problems with product, product looks and smells normal.			Domestic (unspecified)	Cat

EON-146677	10/29/2013 19:51	Uncel Larry's All Natural Pet Treats Dried Liver , Pet Botanics Training Reward Chicken Flavor	The dog was released from the breeder on Friday, (b) (6) and went to its new family. The family gave the dog Pet Botanics Training Reward Chicken Flavor treats and Uncle Larry's all natural pet treats (dried liver) after getting him home on Friday and continued to provide these treats throughout the weekend. On monday morning the dog had a seizure. The dog went on to have 9-10 seizures in the next 24 hours and deteriorated very quickly. The decision was made to euthanize the dog as that was in his best interest.	8	Weeks	Other Canine/dog	Dog	9	Pound
EON-146676	10/29/2013 19:36	Pupperoni, Milos kitchen meatballs	She first was tired and then lost her appetite and started drinking a lot of water as if she couldn't get enough water; like she was dying of thirst. Then she had to pee immediately and vomited lots of clear white foamy liquid like she had the dry heaves. She started losing weight at the beginning of June and I thought it was because we were walking more often which she loved to do. She also had diarrhea and right after. After six years of never going to the bathroom in the house, she did every day and it was lots. It was as if she felt as if she was starving to death and so would eat a lot of food but then would vomit it and/or have diarrhea, she would drink as if she was dying but just continued to lose weight until she had lost 17 pounds. The vet was shocked at her weight gain and said her kidneys were failing her. He kept her on IV for two days and then said, take her home and make her comfortable. I brought her home and she laid down by the fountain and looked very exhausted because she was trying so hard to live and the poison was killing her. The poison, which the vet said would have been similar to anti-freeze was in the pet treats we were giving her, thinking that would help because she kept losing so much weight. She would eat them but later she would vomit the clear white foamy stuff and heaving to get it all out. She lost so much weight, she was just bones. She was a boxer and had been abused before I got her and she just loved me so much and she was my companion. She loved to go for walks and rides in the truck and play in the sprinkler and wander around the garden smelling the flowers then lay down and look at me as if to thank me for such a beautiful backyard. The poison was in the dog treats we bought at both Petsmart and the Dollar General Store. And we bought a lot of them! We gave her mostly pupperoni, milos kitchen, beggin strips and a couple of canyon creek ranch but they were too dry and dingos and a variety of others. A friend of mine would come over three times a day when I worked to give her treats and take her outside. He fed them to her like candy. I would say that the problem started at the	6.4	Years	Boxer (German Boxer)	Dog	41	Pound

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			beginning of June but it could very well have been before that. Her death has devastated me. I miss her every single second of every day and night. She was like Lassie. Once when I went out to check my gate being broken and laying down on the ground, she came and got me to let me know that the police were at the door as I hadn't turned off the alarm. There is a crazy person living across the alley from me that has threatened to kill me and she was my security, letting me know when people were at the door if I hadn't heard them. She was in so much pain that we finally took her to the vet and he gave her a shot to go to sleep. He put her body in a box and we buried her in my backyard with her favorite stuffed animals, leash and collar and blankets. She didn't deserve to die. She fought as hard as she could to live. I was unable to save her because no one told me that you had allowed poison to be sold in our stores. The food and drug administration is supposed to check on these things. That is what I was led to believe. Now I am not sure of anything at the store. Anything could be poison if that was. I am having such a problem with this because we gave her the poison. You made it possible for me to poison my (b) (6) is re (b) (6) at (b) (6). Thank you for allowing me to tell you about this and I hope you can do something to prevent it from happening again.						
EON-146675	10/29/2013 19:36	Waggin' Train Jerky Tenders	Dog stopped eating, became listless, lost weight.	8	Years	Poodle - Standard	Dog	45	Pound

EON-146672	10/29/2013 18:00	kibbles and bits bistro meals	I bought my dogs Kibbles & Bits- Bistro Meals with the real chicken chunks(made by Del Monte foods), last friday.Right around that time my puppy started getting diarrhea and randomly throwing up. On monday his diarrhea was so bad, it was almost clear and coming out, like water out of a faucet and he was vomiting every few minutes and very weak. I took him to the vet to check him for parvo. He tested negative for parvo and parasites and they said he was a "mystery" but gave him meds which he repoded well to and he began to feel better the next day. A few days later he got sick again and so did my other dog. I saw on the news that there was a problem with jerky treats and food made by Del Monte Foods in San Francisco.I thought I better report it. Since I bought there new food, Purina Puppy Chow, they seem to be getting better	4	Months	Retriever - Labrador	Dog	36	Pound

EON-146671	10/29/2013 17:54	Wagon Tail Jerky Treats	We had been feeding her Wagon Tail jerky treats daily since she was about 1 yr old. When she was around 8 yrs old we noticed a lump above & around her tail, we took her to the vets ((b) (6)) & they did a biopsy & found it was cancer. We then discussed the possibility that it was from the China jerky treats & at that time there had been some reports about the treats. Around 10 months later she died. We also have a very good friend who was also giving his dog the same treats & the dog also got cancer in the exact same area of her body & also died. We knew that her cancer was caused from eating those treats daily for numerous years.	9	Years	Other Canine/dog	Dog	50	Pound
EON-146670	10/29/2013 17:36	Beggin Strips, Benecare	My dog, ((b) (6)) died. The vets could not figure out what was wrong with her. Two years ago she was on IV and they were able to get her fairly well. Last two years had x-rays, ultrasounds, no cancer found but ((b) (6)) got sicker. Stopped eating, vomiting, lethargic. Finally was so bloated she could not get comfortable and was in pain so we put her to sleep.	11	Years	Other Canine/dog	Dog	43	Pound
EON-146667	10/29/2013 17:06	Kingdom Pets Wholesome Duck & Sweet Potato	5/2/13 - purchased Kingdom Pet Duck and Sweet Potato treats from Costco Began giving the treat to my dogs. Observed and increase in urination in ((b) (6)) over the month. 6/8/13 - Took ((b) (6)) to the Vet. Run multiple test including a urine test and Canine Panel. Nothing was discovered however antibiotics were prescribed (Clavamox). Given full dosage 7/22/13 - ((b) (6)) became violent ill with diarrheal and throwing up. 7/24/13 - Took ((b) (6)) to the Vet. Nothing detected in blood work. (Fecal and Pancreatic Enzyme) Given Flagyl and Fluids. Slowly recovered over the next few weeks. Discounted treats as of Oct. I don't know if ((b) (6)) illness is related, however after reading the FDA report her symptoms seemed in line with problems associated with this treat. So I felt the need to report our experience.	7	Years	Chihuahua	Dog	12	Pound

EON-146665	10/29/2013 16:54	Waggin Trail Chicken Jerky Treats	On week of April 16, 2012 I opened a new bag of Waggin Trail Chicken Jerky Treats. During that week (b) (6) was given 2 treats. By April 20th, Dottie began showing sign of distress with vomitting and diarrhea and was unable to eat. She was taken to the vets on Monday, April 23. The only change in her diet was the Chicken Jerky Treats. She seemed better but began getting the same symptoms after only one day. (b) (6) was returned to the vet on Friday, April 27 and it was determined that she needed to stay in ICU for the weekend. Luckily that did make her better. The unfortunate part is the vet bill totaled \$987.14. Thank God that you finally recalled the products.	2	Years	Chihuahua	Dog	11.3	Pound
EON-146664	10/29/2013 16:39	Mini Dingo Meat in the Middle	She was fed 3-4 treats over a period of about 4 days. Treats are MiniDingo Meat in the Middle dog treats. Treats distributed by United Pet Group, Inc., Cincinnati, Oh 45230. The dog started vomiting, got weak and dehydrated. Dog was seen at the animal hospital, and was determined to have elevated liver enzymes and elevated kidney test results. Dog continued to deteriorate and eventually went into end stage kidney failure and was euthanized.	8	Years	Chihuahua	Dog	7.8	Pound
EON-146663	10/29/2013 16:39	Dogswell Happy Hipps	After ingesting Happy Hips Chicken Jerky, (b) (6) became incontent (urine) a few weeks later. She was then diagnosed in acute renal failure. Luckily I have a great Vet and (b) (6) is no longer incontinent but I continue to administer subq lactated ringers 2x week. I no longer feed her any treats.	13	Years	Collie - Border	Dog	48	Pound
EON-146662	10/29/2013 16:36	Dogswell Vitality Chicken Breast Flaxseed & Vitamins Helps maintain eyes skin & coat	Our dog, (b) (6) started vomiting and having watery stools about a week after finishing off a packet of Dogswell "Vitality" Chicken Jerky treats. We took him to his vet and he was sent home that day with antibiotics and anti-nausea medicine. Two days later, he went back to the vet, unable to hold anything down. An x-ray indicated he might have an obstruction. His vet performed surgery to remove the obstruction but found no obstruction. Only a "strange flaky" substance in his digestive track and an enlarged spleen. She biopsied both and sent them to the lab (the results aren't back yet). After staying at his normal vet for 4 days, he showed indications of an abdominal infection and was transferred to a specialist. Before performing more surgery, this specialist conducted an ultrasound. He found no free-flowing fluid that would indicate an infection in the abdominal cavity, but did find that (b) (6) has severe pancreatitis. As of 10/29/13, he is still in the animal hospital being treated.	6	Years	Beagle	Dog	37	Pound

EON-146648	10/29/2013 16:00	Cadet Gourmet Duck Breast	At approximately 11am on October 27th, (b) (6) called our clinic reporting that her dog (b) (6) had had some diarrhea that morning. She said that he was still running around the playing like normal but having diarrhea and hunching over when he was outside. We offered to see (b) (6) and also stated that she could try to fast (b) (6) for possible gastritis/enteritis. They decided to do the fast and we warned them that if they see any lethargy or changes in behavior at all to call us. (b) (6) was worried since she had seen on the news about the jerky treats from China causing illnesses and she had been giving her dog these previously, specifically two on the 26th of October. at 6:27pm I received an emergency call from (b) (6) saying that (b) (6) has been having diarrhea all day and was now stiffening up on her kitchen floor. I told her I would meet her within 20 minutes at the clinic. When I arrived at the clinic. (b) (6) was already dead. There was profuse bloody vomit all over the cement in front of the front door of the clinic.	4	Years	Shih Tzu	Dog	15.6	Pound

EON-146646	10/29/2013 15:51	Iams Savory Sauce Bacon flavored	Owner purchased product to entice his dog to enjoy her kibble more effectively. Within 48hrs of owner beginning to apply Iams Savory Bacon flavored sauce the animal started to have severe vomiting and diarrhea. This began just after the owner arrived in PA to visit his parents; so, he took his dog into a local Vet to be seen on 10-26-13. The local Vet performed an examination and radiographs and fecal examination and prescribed flagyl and fortiflora. The dog was also put on boiled chicken and rice on 10-26-13. The patient stopped vomiting on 10-28-13 but diarrhea continued. Owner called my hospital on 10-29-13 am and when asked about any dietary changes prior to incident the owner did relay he had started this Iams sauce. The owner brought the bottle in at the time of the appointment and a 20 serving bottle is empty at this time. An exam and bloodwork was performed and it has been found that this patient has an inflammatory based pancreatitis.	2	Years	Cattle Dog - Australian (blue heeler, red heeler, Queensland cattledog)	Dog	57	Pound

EON-146641	10/29/2013 15:24	Canine Carry Outs Beef Flavor, Canine Carry Outs Chicken Strips	<p>Patient presented on (b) (6) for acute onset of vomiting and diarrhea. The patient became sluggish on (b) (6) in the late evening, but he was still eating and drinking. On (b) (6), the patient refused to eat. The owners tried to offer different types of food, but he refused. He was still drinking water, but then started to vomit. He continued to vomit throughout the day. In the evening, he developed a dark diarrhea. Patient was still active but definitely slower than his usual self. On the morning on (b) (6) the patient was too weak to stand and was brought in on emergency. There is no history of exposure to human medications (other than the owner gave the patient a Tums on Saturday). There are no poisons or toxins on the property. No rodenticides. Household cleaners and chemicals are out of the dogs reach. The yard is fenced. He does like to chew on things and will destroy toys and household items. No recent history of foreign body ingestion. He is current on vaccinations according to the owner, however he was seen at another clinic and so I do not have record of these vaccines. The only change that the owners can think of is an introduction of a new treat. They purchased Canine Carry Outs Chicken Strips and Beef flavor distributed by Delmonte out of San Francisco, CA. The treats were purchased at the Family Dollar store. (b) (6) received these treats on Saturday, the (b) (6) Thursday, the (b) (6) on a daily basis.</p> <p>Patient presented laterally recumbent. He was very weak. Immediately on presentation, he started writhing and vomiting very bloody, malodorous emesis. He also had bloody diarrhea leaking from his rear end.</p> <p>Physical exam: Temperature 101.9, Pulse 168 BPM, Respirations 44 BPM, mucous membranes were light pink and the capillary refill time was prolonged at 3 seconds. His mouth was full of bloody vomit, so that was cleared away. He had horizontal nystagmus. He was dehydrated at an estimated 12%. His heart and lungs sounded clear on auscultation. His abdomen palpated normally but he was uncomfortable on palpation, he</p>	1	Years	Boxer (German Boxer)	Dog	60	Pound

I was going through my closet and found an old opened bag of treats in my closet.waggin train wholesome duck jerky tenders made in China lot no b1ca4579a best before 121112.. They are old and dried out.they have little holes all thru them as if someone had punctured them with needles. Please contact me if you would like to have this. Thank you						
EON-146623	10/29/2013 13:30	Jerky treats	(b) (6) and (b) (6) have been eating jerky treats from China, they have both had skin problems since eating treats	5	Years	Shih Tzu	Dog	23	Pound
EON-146622	10/29/2013 13:30	Pup-Peroni	<p>We brought my dog (b) (6) home in July. He is just over 1 year old now. In about August, the ONLY treat we have ever given him was Pupperoni, as we bought a few bags from the store to use in training. We don't typically give our dogs treats, but needed something to train with. My other dog has had a few of the treats, but (b) (6) ate significantly more as he was the one being trained.</p> <p>Over the past few months, we have noticed a gradual lack of appetite and weight loss in (b) (6) He came to us at over 90 lbs and now weighs about 75. (b) (6) recently became very ill and we brought him to the emergency vet and the regular vet. Symptoms were vomitting, lethargy, lack of appetite, weight loss, and difficulty breathing. We did not have the funds to do all tests at the vet, so we did a lung x ray, which showed a substance in his lungs (could have been pneumonia or aspirated vomit) and fecal test which showed a hookworm. We did not do a stomach x ray or blood test. (b) (6) was put on worm meds and antibiotics. He has been gradually getting better and regained his appetite. We have not given him any Pupperoni since he became ill, though I still have the bag.</p> <p>We are not sure if the Pupperoni may be a contaminated product related to the chinese jerky warning, though we wanted to file this report just in case. I would normally not be concerned, except that (b) (6) was healthy before, the only treat he has ever had has been Pupperoni, and he has been ill for quite some time now.</p>	1	Years	Rottweiler	Dog	75	Pound
EON-146619	10/29/2013 13:24	Waggin Train	I gave her the treats 2 times per week for about a year. She developed nasty breath, like her insides were rotting away. We took her to the vet and he diagnosed her with kidney failure. He tried for about 2 weeks to flush her kidneys out, but we finally had to put her down because she was in excruciating pain.	8	Years	Schnauzer - Miniature	Dog	31	Pound

EON-146590	10/29/2013 11:24	Authority Brand Chicken Jerky	<p>Gave dog 1 jerky treat. Almost immedietly he began to act "odd". He stayed away from the family and retreated to a corner of the room. That night, he began uncontrollably trembling. The next morning he was extremely lethargic and would not come down the stairs or go outside. He felt warm to the touch. His belly and ears were very red. He slept all day and would not move at all. We took him to the emergency clinic and they did blood work, which according to them, came back normal. The next day he seemed a bit better, but it was at least 4 full days before he recovered. I am not sure if he has any long term impacts from this. We keep a very close eye on him, he is an inside dog, he does not normally eat anything other that dog food, and he was not given anything else that day, so it is doubtfull that it was anything other than the dog treat. The dog treats were Chicken Jerky that we purchased at Pet Smart, "Authority" brand. (I believe that is a store brand). It was a 16 ounce bag. I copied some numbers of the bag. The one was 7 37257 34315 3 (possibly the UPC) and the other was AU-12-040 (not sure what that is). I did contact the store, gave them the treats, but have not been back in contact with them. I have heard from noramerica, which I believe is the producer of the product.</p> <p>I submitted this info on 10/23 under FDA ICSR ID 1031246. The report key for follow up was D9A72BB7-D97F845E-617E9968-D59EDF9D-4FA355FB-B8345FDB-26F5F755-2CE4BC59. There appeared tio be some kind of computer problem that would not accept the date problem started correctly, so I have resubmitted the info again.</p> <p>Thank you. (b) (6)</p>	2.75	Years	Retriever - Labrador	Dog	95	Pound

EON-146546	10/29/2013 9:45	Canyon Creek Chicken Strips, Milo's Chicken Treats, Waggin Train Chicken Strips	<p>We are submitting this report due to the recent news report on chicken jerky chews. We put (b) (6) down on (b) (6).</p> <p>On April 27, 2013 we took (b) (6) to our Banfield for his normal check-up. Prior to this the only symptom which we never have much thought about was (b) (6) drinks a lot of water; he was very active dog so it was no concern.</p> <p>That day Banfield advised us (b) (6) was in stage 3 renal failure. We were shocked, in disbelief and did not do anything that day. Within a few days, (b) (6) started having problems with his balance and leaning his head to one side along with eating less food. Our daughter who is a RN came over, we showed her the lab tests; she agreed he was in renal failure.</p> <p>We took (b) (6) back to Banfield; and treated him with lactate ringers IV twice a day. We did this for about three weeks. In order to get him to eat, we blended Science Diet KD with warm water. We would have to force him to eat; He was becoming weak, lameness in joints, falling down, tired.</p> <p>We decided to contact another Vet, (b) (6) to get a second opinion on treatment or if we should put him down. They ran a full set of lab tests and x-rayed him. The x-ray showed his kidneys were enlarged and the tubes between the kidneys and bladder was also enlarged. With the condition he was in, they referred us to (b) (6). I went there that night and they admitted him.</p> <p>(b) (6) ran lots of tests; I became frustrated seeing the condition (b) (6) was in and (b) (6) could not determine a cause. I was again thinking of putting him down, but after a heated discussion, we agreed to try a strong anti-biotic (Simplicef). I do not blame them, they were very</p>	6	Years	Shepherd (unspecified)	Dog	88	Pound

			<p>good but at this point we had spent considerable funds and still had no real solution.</p> <p>This did not work either, so again we were deciding whether to put (b) (6) down. We went back to (b) (6) ; we could not do it. So we tried another course of action using steroids and something else if I remember correctly. There was no change, on (b) (6) we put (b) (6) down.</p> <p>I am sorry if there are a few gaps in this, it hurt and still does. A perfectly healthy dog and then this with no reason. A month before, we put another dog down, (b) (6) She was also a Shiloh Shepherd. She was feed the same treats from Milo;s, Waggin Tail, and Canyon Creek. She had cancer for some time and it was time to let her go after 13 years. We still have one of our three dogs, (b) (6) who is 7 years. I worry about him after this; he changed, depression for some time. Since we have gotten two other dogs and are back to three.</p> <p>I have all the records from Banfield, in April 2013 (b) (6) BUN was 44 and Creatinine 2.6, in April 2012 BUN was 35 and Creatinine 1.9, in April 2011 it was BUN 43 and Creatinine 1.5</p> <p>There are extensive records available at the three Vet offices below:</p> <p>(b) (6)</p> <p>(b) (6)</p> <p>(b) (6)</p> <p>Thank you for looking into this.</p>

EON-146542	10/29/2013 9:30	unknown	In January 2011 a bag of chicken jerkey treats was purchased and the dogs were each given one. (b) (6) began acute/intractable hemorrhagic diarrhea and was brought to the clinic on emergency. The situation resolved quickly with symptomatic care. "(b) (6) a 12 year old female spayed blue heeler x, also had the treats with no immediate or obvious problems. But (b) (6) on screening bloodwork prior to a routine dental cleaning she was found to be azotemic. She was treated, and the values improved but were persistently elevated (bloodwork re-evaluated (b) (6) and (b) (6). She was euthanized (b) (6), due to progressive chronic renal failure with presumptive transitional cell carcinoma (based on ultrasonography/ urine cytology). No definitive diagnosis was made in either case, but the owner was concerned that both incidences may be related to tainted chicken treats and asked that I make a report. I am certain she would be willingly to answer questions, I simply do not have permission to give out her contact information.	9	Years	Pinscher - Miniature	Dog	12	Pound
EON-146532	10/29/2013 9:00	Kingdom Pets Duck & Sweet Potato Treats made with lean duck breast	Gave the puppy these treats for about a month. He started having upset stomach and Diarrhea. Was not sure what was causing it. Saw a report on TV of people complaning these treats where making their dog sick. Stop giving the puppy the treats call Costco where I bought the item was told I could return the product. Puppy has not had any stomach problems or diarrhea since I stopped giving him the treats.	6	Months	Beagle	Dog	28	Pound
EON-146531	10/29/2013 4:00	Jerky sticks	my beloved Pomeranian died in 2010. I never found out how she died -- she had been kind of slow for a few days and then had a spell & died. She could not be revived. I had been giving her jerky stick treats all her life and had always bought them at Family Dollar Store. I do believe this is what killed my sweet little dog.	9	Years	Unknown	Dog	10	Pound
EON-146530	10/29/2013 0:30	Dogswell Healthy Hips Chicken Breast	Dog awoke suddenly in the night in distress. Not necessarily unusual with his anxiety related to LP; however, he did seem weak. In the morning, dog was was barely able to walk and was extremely weakened. Fell several times. Drooling. Vomited. Face was semi-paralyzed. Took to vet who noted extreme nystagmus. Treated nausea from motion sickness with Prilosac per vet's recommendation for two days; dog remained nauseous and would not eat. Upon second visit, decreased nystagmus. treated nausea with cerenia. No significant improvement. It has been a long road getting the dog to eat; had to syringe feed for a couple weeks. Has only resumed eating mostly normal in last few days. Originally about 50 pounds, now down to an extremely skeletal 40.	11	Years	Mixed (Dog)	Dog	49	Pound

EON-146529	10/29/2013 0:15	Petmate Booda Bones Wheat-Free Dog Chew Chicken Flavor	The evening of October 5th we gave (b) (6) his first "Petmate Booda Bones Wheat-Free Dog Chew Chicken Flavor". The next day (6th) he threw up a brown slimy vomitus twice. This was something completely new for him. He seemed to feel fine otherwise, was eating and drinking. On October 7th, he threw up the same type material (very slimy also) over the course of several hours, a total of three times, and his poop was covered in the slimy material. We rushed him to the vet and after lots of worry and \$144, the conclusion was his bloodwork was normal. They gave him two medications to take at home, an injection to stop the vomiting, and special food. Our dog had come into contact with nothing different, other than this product. We live in a neighborhood with small yards, which ours is fenced with a wooden privacy fence. Our dog had only been in our backyard with supervision. He had not had any different food or snacks, other than this product.	7	Years	Dachshund (unspecified)	Dog	15.4	Pound
EON-146528	10/29/2013 0:09	Greenies, Happy Hips, Happy Hips Chicken Jerky Treats	<p>Purebred Australian Shepherds, ages 10, 7,&1 given small greenies chews. All 3 dogs had difficulty with swallowing treat. Seemed to shred or become stuck in throat as solid piece. I had to retrieve pieces of treats manually with my fingers in all three dogs who were coughing and gagging and choking. The first time the dogs were give the treats the 10 year old had a solid mass stuck in his throat and was choking. The 7 and 1 year old did not have difficulty the first time. I thought perhaps it was his age. I tried a second time and did not give the 10 year old one of the greenies and the 7 and 1 year old experienced choking difficulties at that time. Again I had to manually retrieve pieces of the greenies from their mouths and throats. Later that night the one year old vomited shredded pieces of the greenie and continued to cough throughout the night.</p> <p>I tried Happy Hips jerky treats with my dogs and the 10 year old cannot chew and swallow these treats.The 7 and 1 year old could chew them but I would not give them to any of my dogs again after the 10 year old could not chew and swallow them properly.</p> <p>I believe too many of the "Chewy" treats are a huge choking danger to dogs. Dogs do not or cannot chew them properly and then try to swallow them and the treat can become lodged in the dog's throat causing asphyxiation and death. Many peoply will give their dog a chewy treat upon leaving the house to keep the dog "busy." This is an accident waiting to happen. They should be banned along with rawhides, cowhooves, dental type treats and the like type chewys.</p>	5	Years	Other Canine/dog	Dog	40	Pound

EON-146504	10/28/2013 21:00	EXER-HIDES MUNCHY RAWHIDE STICKS	<p>Okay so after recently reading about the dog treat dilemma in the United States concerning the ones made in China, I decided I should check the treats that I give my dog. I give him several treats throughout the day, we play a game with them and it's his favorite thing to do. I know I have given him the exact brand of jerky treats before on several occasions as well as the Milo's. My dog has never had any health issues until about 6 months ago he developed UTI and when his urine was tested the vet said that it had alot of crystals in it and asked a bunch of questions about the food and treats that I fed him and she indicated it could be from cheap food.</p> <p>Anyways, so I checked the treats and one of them was made in the USA the other was distributed by Wal-mart and I didn't see where it was made at. Well again his Urinary Tract or the crystallized urine was causing his problems so I was getting a little worried luckily I just so happened to have some antibiotics to give him and he seems to have gotten better in the period of the last four days at 2-3 pills a day. however he is still kind of gruntish and whiny which he is usually not whiny and is pretty good at masking pain. My point to this is, he has stopped eating the treats that were from Walmart so I again looked at the package and found where it said "Made in China" before I seen that I tried to give him several of them and he refuses to eat them and believe me my dog does not turn down treats EVER. So I found this to be suspicious and I have a bunch of them left thought maybe there could possibly be a small chance that you could find any helpful information pertaining to this situation. Let me know.</p> <p>My dog (b) (6) is a Male Neutered American Staffordshire Pit Bull Terrior I have had him since he was 6 wks old and he is now 11years old weighs about 65 lbs</p> <p>I noticed earlier today that he has at some point vomited in the room he sometimes sleeps in</p> <p>I have every record since the first visit to vet</p>

			<p>I have had blood work tests done 2 or 3 differents times throughout his life just to make sure things were good. the most recent was done probably 1-2 years ago I usually go to (b) (6) and see (b) (6) D.V.M. phone number (b) (6) address (b) (6) email (b) (6)</p> <p>He is a great vet he listens to what you tell him and is very thorough in his checks and he will make sure he explains things in way you understand. he makes himself available and will be there in an emergency however he is closed on Thursdays, and I really thought it was best to take him that day which of course was a thursday and it was not necessarily an emergency so when I took him this last time I took him to (b) (6)</p> <p>(b) (6)</p> <p>(b) (6)</p> <p>my dog is NEVER outdoors unattended as he can not be because he was deemed by the City of (b) (6) as a potentially dangerous animal and that is one of the stipulations so I can honestly say there is never a moment outside that he is left unattended at all. he did eat the first half of the bag of treats.</p> <p>The treats are a 50pk (STICKS) of EXER-HIDES Munchy Rawhide Sticks they are Artificially chicken flavored distributed by Walmart Stores Bentonville, AR 72716 product id 43902 and the product sku is 68113143902 and Made in china Purchased at Walmart at (b) (6)</p> <p>(b) (6) The other things mentioned on this package are that it is treated by irradiation ingredients listed are:: BEEFHIDE, TAPIOCA FLOUR, ARTIFICIAL CHICKEN FLAVOR, ARTIFICIAL COLORS (FD&C BLUE #1 FD&C RED #40, FD&C YELLOW#5) ALSO; QUESTIONS CALL 8773072192 NET WT 16 4 OZ</p>						

Key	Created	Product Name	Description	Age	Age	Breed	Species	Weight	Weight UOM
			<p>YELLOW#5) ALSO; QUESTIONS CALL 8773072192 NET WT 16.4 OZ (465G) SAYS PROMOTES HEALTHY CHEWING HABITS; LONG-LASTING NATURAL CHEW; SAFE, NON TOXIC BEEFHIDE THEN CAUTION: SUPERVISE YOUR DOG WHEN GIVING THIS CHEW; NOT FOR HUMAN CONSUMPTION</p> <p>I am not necessarily saying that these are the cause of his recent health concerns but he does consume several treats a day and I am always buying different brands of treats so if you could recommend a good brand of food and treats that would be great. The date I am going to refer to will be the most recent approximate date that I started noticing the problems (which by the way was before I had read the article on this topic). However the very first concern was on a thursday, 05/23/2013 and I don't know for sure which brand of treats he had at the time however they may have that information on file because that is one of the questions that she asked me.... was what kind of food and treats I fed him. Oh and the receipt refers to the urinalysis with sediment. vet name (b) (6), DVM his patient id is (b) (6)-1 weight at the time was 71.10 lbs.</p> <p>Please let me know if I can provide any help with this matter or if I send in these for testing or what information you might be able to provide.</p> <p>Thank you (b) (6)</p>

EON-146502	10/28/2013 20:39	Beefeaters Pumpkin Treats	I purchased your product just a few weeks ago from my local (b) (6). Within 24 hours of eating the product, I noticed my dog becoming lethargic, and not eating. These symptoms progressed rapidly within 48 hours into throwing up and bloody diarrhea. A few days later my healthy,energetic two year old dog was in the hospital on IV's and medication. The vet hospital did all kinds of bloodwork, xrays, exams, etc and determined it was a food or treat. He has been eating the same two foods in rotation for nearly a year and a half. Both bags he had been eating for weeks now. The only new item introduced was your Beefeaters Pumpkin Treats. My dog nearly died, had he not been seen that day and treated that day. Upon inspection by another vet this weekend for routine care, she to indicated based on all of the information it seems the treat is the only cause for the gasteric distress he was under. This has been a very costly process and emotionally painful for all of us but especially for my child. I am very unhappy with this product. I hope no other family has to experience this agony.	2	Years	Maltese	Dog	18	Pound
EON-146500	10/28/2013 19:45	Canine Carry Outs	(b) (6) became ill on Friday night. She was still sick on Saturday she was passing blood in her urine and large clots were coming from her urinary tract or rectum. Late Saturday she started vomiting and became lethargic. I was waiting for my daughter to come home sunday morning so we could take her to the vet together but (b) (6) died in the early morning hours of Sunday (b) (6). she had been eating Canine Carry Out treats in the week prior to her death.	12	Years	Terrier - Boston	Dog	30	Pound

EON-146499	10/28/2013 19:24	Beefeater Brand, Walgreens / Nice, American Kennel Club	On or about October 12th or so, I sent you all, along with 13 others, an extensive letter, investigating I did on my own, etc. Then on or about Oct 22nd, I started to hear from the news media, papers, etc. that you were AGAIN re-investigating these treats. PLEASE note, that I have already spoken to the Associated Press, etc and I also believe that it is beacuse of MY letter/package to you and others, this has once again re-surfaced. I can not believe that since 2007, when you started investigating these treats you FAILED to at least put warning labels on all of them to us pet owners. I now notice that on Nov 21st you have an OPEN meeting in regards to regulations on pet food, etc. YOU NEED TO REQUIRE WARNING LABELS ON ALL PRODUCTS, NOT JUST JERKY TREATS, ALL PRODUCTS - MAY CAUSE SERIUOS ILLNESS OR IN SOME CASES DEATH TO YOU PET" As it was NOT the Jerky treats that killed my (b) (6) it was the sweet potato treats, sweet potato wrapped in bacon - Beefeater Brand; Walgreens Nice brand and "American" Kennel Club brand - I have a petition now started on Change.org for you, the FDA to have these warning labels on them - they are KILLING OUR PETS, FRIENDS, FAMILY MEMBERS, they are NOT just dogs!! I started this, and I WILL FINISH when I get some action!!

EON-146495	10/28/2013 18:54	Milo's Treats	(b) (6) presented to (b) (6) on 10-22-13 for lethargy & anorexia of 1 day duration. Intermittent whining & limping observed at home. Mild fever & lethargy noted on examination, but no other symptoms evident. (b) (6) had gotten into a treat toy (uncertain of the name) and ate the entire treat that should have lasted several days on 10-22-13. Owner elected to monitor in lieu of diagnostics. (b) (6) was presented the following day for diagnostics after the owner had heard on TV about the Jerky Treat related illnesses in dogs and recalled that (b) (6) had gotten into the bag of Milo's Kitchen jerky treats on 10-17-13 and ate all the remaining treats (at least 10). They had purchased the treats from WalMart a week prior and each dog was getting 1 treat per day. The bag was shredded and not saved, so no lot number is available.	8	Months	Mountain Dog - Bernese	Dog	33.3	Kilogram
EON-146494	10/28/2013 18:45	Milo Jerky Dog Treats	I described what started to happen to (b) (6) in my initial submission on (b) (6), ID # 21500, ICSR # 1031929, but since that submission, our beloved pet (b) (6) has passed away during the early morning hours of (b) (6). He seemed to have been progressing good after being released from his 4 day stay at the Vet on (b) (6). However, he started eating less and less and eventually he wouldn't eat at all. He drank a little water and appeared extremely restless the entire day on Saturday on into the night up until he passed away. On (b) (6), I saw another news broadcast on CBS about dog treats making our pets ill and this time I immediately recognized one of the treats shown as one that I had purchased earlier this year and fed them all to (b) (6) over a period of time, unknowingly at the time that they were possibly harmful for him since i just found this bit of information out only recently..	11	Years	Bulldog - American	Dog	56	Pound
EON-146492	10/28/2013 18:45	Kingdom Pets All Natural Ingredients Chicken Jerky	Feeding Kingdom Pets Chicken Jerky caused severe nausea, vomiting and diarrhea in 2 of the 3 pets. The 2 animals affected were golden retrievers (1 male - 6 yrs and 1 female - 12 yrs) previously in good health. Antibiotics (metronidazole 500mg tablets) had to be prescribed by a veterinarian and administered to both animals affected in order to treat symptoms.	6	Years	Retriever - Golden	Dog	63	Pound

EON-146491	10/28/2013 18:36	Milo's Kitchen Jerky Treats	I don't know if this is related, but May 2012, (b) (6) started to have nasal discharge. I took him to the vet, we tried many different meds, nothing helped. I didn't realize that the only thing I gave him that was "new" last year was the Milo's Kitchen beef jerky treats. Once I realized it (April 2013), I immediately stopped. (b) (6) got sicker, ended up with bronchial pneumonia. The vet thought he may have inhaled some of that nasal discharge into his lungs and it got infected. He was very sick (I thought he was near death), and after many vet visits, many meds and 3 days on an IV, he finally got better (thank God). He's fine now, still has the nasal discharge but not as often, and is otherwise happy and healthy and active. The vet doesn't know if it's allergies or what, but I'm keeping a good eye on him. I never gave him the chicken treats, only the beef, but don't know if that was related to his problem, but it was the only new thing I started giving him when his nasal discharge problem started. He was 8 1/2 years old when it started and he just turned 10.	10	Years	Retriever - Golden	Dog	50	Pound
EON-146490	10/28/2013 18:06	Kingdom Petschicken jerky	After giving my dog 1/2 Kingdom Pets chicken jerky in the morning she was getting sick at night. She started urinating, diarrhea & throwing up some nights. It always included her running around on our bed all night. Getting up and down off the bed all night. We stopped the jerky and this all stopped.	9	Years	Terrier - Yorkshire	Dog	9	Pound
EON-146489	10/28/2013 17:54	Trader Joe's Chicken Recipe Jerky Sticks	Patient presented 10/26/13 for lethargy, not eating and some vomiting. Bloodwork showed kidney failure with a BUN greater than 130mg/dl, CREA greater than 13.6mg/dl and PHOS greater than 16.1mg/dl. Patient was hospitalized on IV fluids, anti-emetics, antibiotics. Owners took patient home over weekend and continued SQ fluids and returned Monday 10/28/13 for continued hospitalization. Patient still very lethargic and not wanting to eat.	7	Years	Lhasa Apso	Dog	22	Pound

EON-146488	10/28/2013 17:54	Newman's Own Organics	Owner has three dogs in household: a 7 year old, male neutered Basset Hound ((b) (6)) a 7 year old, female spayed, Weimaraner ((b) (6)) and an 11 year old, male neutered, mixed breed dog ((b) (6)). Owner purchased a new treat for the dogs, Newman's own sweet potato jerky. Patients had never received this brand of treat before. Within two days of owner first giving treat, all three dogs developed vomiting and diarrhea (9/9/13). Blood work performed on ((b) (6)) was unremarkable. Blood work on ((b) (6)) revealed an elevation in ALT at 104 (10-100). Blood work on ((b) (6)) revealed a mild elevation in ALT at 103 (10-100). All dogs were treated with Cerenia, Metronidazole, and a bland diet. All three dogs initially responded well to treatment but ((b) (6)) diarrhea returned about 1 month after the initial adverse event. ((b) (6)) clinical signs at the initial adverse event were the worst out of the three dogs. Owner did not continue to give the new treats after the initial event and has since discarded the bag of treats. ((b) (6)) blood work was repeated about one month after the initial adverse event occurred when the diarrhea returned on 10/3/13. Her ALT has increased further from 104 to 138. She is currently being treated with Denosyl, Amoxicillin, and Metronidazole. Recheck of blood work is scheduled for about one week from now. Per owner, ((b) (6)) is doing well at this time.	7	Years	Hound - Basset	Dog	60.6	Pound
EON-146487	10/28/2013 17:51	Highland Farms Jerky Treats	Owner first noticed that ((b) (6)) was having reddish tinged urine and was leaking urine along with increased water consumption. Was treated for a UTI despite a negative culture (but bacteria seen on UA) with Amoxicillin. Over the weekend ((b) (6)) got worse (became lethargic stopped eating and has been eating boiled chicken and white rice (hand fed) and bloodwork was run and an increased BUN level (56 (6-31)) and Creatinine level (2.3 (0.5-1.6)) were noted. Spoke with the owner today (10/28) and she began having some bloody diarrhea. Is currently on Famotidine 20mg BID, Amoxicillin 100mg BID, Tramadol 100mg BID, and Metronidazole 375mg BID.	11	Years	Shepherd Dog - German	Dog	84.2	Pound

EON-146486	10/28/2013 17:45	Miley's Kitchen Chicken Meatballs	During the late afternoon in August, our dog became very lethargic and was experiencing shaking episodes, his eyes looked dialated. We thought he got stung by a scorpion and medicated with antihistamine. After about 8 to 12 hours he seemed back to normal but did not have much of an appetite. This happened 3 more times within about a month or so. In the subsequent episodes he would act very scared at first, wanting to be held constantly or hiding under furniture before the shaking started. After the second episode we went to vet and had blood work done, everything came back normal. We began back tracking anything new we had done with him or given him to eat. We tracked it back to when we changed his dog food to an lams brand and bought new treats called Miley's Kitchen Chicken Meatballs in August. We went back to the original food in October and did not give him anymore Miley's kitchen treats. Since that time he has appeared to be fine.	5	Years	Terrier - Rat	Dog	17	Pound
EON-146485	10/28/2013 17:45	Beefeaters Duck Jerky, Beefeaters Chicken Wraps sweet potato dog treats, Beefeaters Chicken Chips	He got the 2nd cortisone shot on Saturday, Oct. 19, 2013, but did not respond like he should have. He just had no energy, no appetite, did a lot of panting, you could tell by looking at him that he didn't feel good. I thought the problem was his back and it never occurred to me that anything else was going on. Tuesday, Oct. 22, when I got home from work, I could tell he had taken a definite turn for the worse. We carried him to the car and the vet's office. He took blood and it showed that he had elevated kidney and pancreatic numbers. The vet said the panting showed intestinal bleeding. (b) (6) eyes began to cloud over and we told the vet to euthanize him. I saw on the news that night about the jerky treats made in China causing dogs to to die. (b) (6) loved those things and ate them a couple times a day. I kept the treats and the packaging.	11	Years	Shepherd (unspecified)	Dog	55	Pound
EON-146484	10/28/2013 17:45	Kingdom Pets Duck and Sweet Potato jerky treats Kingdom pets chicken jerky treats	started vomiting and stopped eating for about 6 days.	8	Years	Terrier - Jack Russell	Dog	22.8	Pound

EON-146479	10/28/2013 17:09	Multiple Brands	After feeding chicken jerkies and dingos, he became extremely ill. He coughed up yellow fluid and had trouble breathing. He could not sleep because he had so much trouble breathing, coughing, and had a poor appetite. The vet administered Keflex and steroids. A week later, he became much worse with more of the same symptoms. A vet administered doxycycline and cough pills tussigon. He became much worse and had to open his mouth in order to breathe. He quit eating and drinking. The vet referred us to a VCA hospital after taking xrays. She diagnosed him with pneumonia. VCA stated that he had an enlarged esophagus and bronchitus and put him on clavamox and hydrated him subqutaneously. He became much worse. He could not breathe and would not eat. We took him to another VCA hospital and they hydrated him and gave him quaif/dext for cough. He was worse still. Returned to our original vet and she said she did not think she could help because she did not know what was wrong and referred us to (b) (6) So, we took him to the large vetinary Specialist Hospital and They tested him for cancer and several other ailments. Then they anesthisized him and drained a tremendous amount of phlegm from his airways and put him on steroids. This went on for two months and cost me 4 \$4000.00!!!! and then some. No vet could tell us what was wrong with (b) (6) All of the xrays from each vet showed nothing in his lungs and all the expensive tests tha t were taken came back clear including the culture taken of his phlegm. In addition, the last vet at the specialized hospital stated that it was extremely unusual for the dog's airways to to be filled with phlegm. We weened (b) (6) off the steroids ourselves because his personality changed and he was urinating and deficating in the house which he had never done in his lifetime. This has been very costly. The cause now I believe to be a result of the jerkies made in China.	4	Years	Poodle - Standard	Dog	70	Pound
EON-146477	10/28/2013 16:51	PetShoppe Chicken Jerky	(b) (6) was hit with symptoms of trouble breathing, loss of appetite, and sluggish behavior. A visit to the vet yielded no solutions. (b) (6) symptoms seem to have been improving on there own. After the visit to the vet I learned about the FDA warning for dog treats. (b) (6) has a Chicken Jerky Walgreens generic treat brand which was manufactured in China. He has since stopped being fed the treats and seems to be doing better. He only consumed about 5 pieces.	5	Years	Mixed (Dog)	Dog	149	Pound
EON-146475	10/28/2013 16:36	Costco sweet potato and duck treats	Dog sweet potato and jerky treats were fed 1-2 times per day for several days. My dog started consuming more water, started vomiting and had diarrhea and stopped eating.	9	Years	Shepherd Dog - Australian	Dog	70	Pound

EON-146468	10/28/2013 16:09	Veggie Life. Dogswell Vitality with Flaxseed and Vitamins chicken and banana	<p>(b) (6) had been given veggie life vitality treats from Dogswell brand (chicken jerky with dried banana). She seemed fairly normal during the course of the week, but did have one possible pre indicator of illness on Wednesday evening/ Thursday morning when she vomited a substantially large amount of good out of her system that appeared to be digested (no whole pieces).</p> <p>On Saturday (b) (6) became lethargic and would not eat. She vomited several times in the afternoon and had diarrhea with some blood in the stool. By her 5 pm walk, she was only releasing blood and tissue from her bowels. She was admitted to VSEC emergency hospital that evening and put on IV fluids. She was diagnosed with hemhoragic gastroenteritis with unknown cause. After medical treatment (b) (6) health has improved, though she had lost quite a bit of weight and is still on a restricted bland diet to ensure that her fragile digestive system repairs.</p> <p>We plan to file a complaint with the Dogswell company and alert the store where the treats were purchased. Our medical expenses were approximately \$1100. We have also filed a report with our pet insurance provider.</p> <p>Most importantly, my family is concerned for the welfare of pets, and hopes this information can help the FDA to recall these treats. I never checked the packaging for country of origin on this product as I never would have imagined that an American company product claiming to be antibiotic, byproduct, and hormone free would outsourcing food manufacturing to China. Now I will be sure pay closer attention to pet food packaging. I also hope that all pet foods will be required to provide a country of manufacture on their packaging as it has now come to my attention that many pet foods do not include this information.</p>	3	Years	Boxer (German Boxer)	Dog	51	Pound
EON-146467	10/28/2013 16:06	Dream Bone	I found him in the yard in shock....listless like a rag doll. Ran him to the vet....she is one block away. She said he was in shock and had no blood pressure...barely. Hooked him up to an IV and oxygen. Stabilized him and then he was transferred to a vet ambulatory care center where he was there for 2 days. He threw up violently for 5 hours. We found the puke in the yard. It was a bone I had given him the day before. Called Dream Bone sold at Walmart and Target. His liver enzymes are supposed to be under 100 and they were 1100. The vet said his gastrointestinal track was very angry...on all kinds of drugs but doing fine now that it has been a week.	15	Months	Terrier - Welsh	Dog	18	Pound

EON-146424	10/28/2013 14:39	Pupperoni	We began noticing our dog, (b) (6) being very lethargic, vomiting, suffered from a seizure, licking her paws (a symbol of pain) and licking her hips, in late 2012. We thought it was perhaps her food, so we switched food brands but she didn't get better. In early 2013, the problem did not improve so we took her to our vet. The vet suggested a series of activities to try and determine what the problem was, suggesting that we switch to a totally gluten free diet first. In the spring of 2013 (March maybe?) We switched her dog food, but hadn't gotten around to switching her treats. After a month, she was still lethargic and vomiting regularly, so we switched her treats. We previously use Pupperoni treats, but switched to a Dick VanPattens fish/venison treats. Within about 2 weeks - we notice a dramatic improvement in our dogs energy, appetite and cessation of vomiting. After 4 weeks, she has had a marked improvement and is just about back to her old self. We've reported our concern to our vet, and just recently went back that we strongly believe our dog was affected by the jerky treats, but they hadn't even heard of the jerky issue (even though it was in the national news when we went back to talk to them about it). Even though she doesn't vomit anymore and her energy is MUCH better, I still feel there might be some lingering effects. She gets tired very easily and just doesn't quite seem to be 100%.	3	Years	Pekingese	Dog	15	Pound
EON-146423	10/28/2013 14:21	1) Pet Shoppe Natural Dog Treats Sweet Potato and Chicken 2)Pet Shoppe Fries Dog treats sweet potato 3)Pet Shoppe Chicken Jerky for Dogs All 3 are Walgreen Pet Shoppe Brand	<p>We have noticed that (b) (6) was not himself in (b) (6). He loved to eat, but started not eating. I took him to our vet after I have noticed he looked like he was anemic with very pale gum. After series tests and treatment, he never gained appetite.</p> <p>At the time, we had dog treats made in Louisiana, so I did not think it was the cause of illness, but sometime last year, I have found chicken jerky wrapped sweet potato snack at Walgreen, which the package said ALL NATURAL. I have bought at least several packages of the snacks for my two French Bulldogs.</p> <p>After the very last blood work, our vet diagnosed that (b) (6) had Addison's disease, that was (b) (6). He passed away on (b) (6).</p>	7	Years	Bulldog - French	Dog	25	Pound

EON-146419	10/28/2013 14:15	Beefy Rib Bone	<p>On January 13, 2013, I bought two Beefy Rib Bones (a treat manufactured for dogs) at Tractor Supply Co. in (b) (6). I gave one bone to my dog, (b) (6) on the evening of that same day. By Monday morning she was violently ill. I took her to the veterinarian. I have a letter from him ((b) (6)) stating that her illness was caused by the bone. By Wednesday morning my dog was dead.</p> <p>I contacted Tractor Supply first and then subsequently Scott Pet Products. They paid my bill that was incurred at the vet's office (\$550.00) They also gave me money toward the purchase of another dog (\$150.00). But I told them that what I wanted was a warning label on the product or for them to remove the product from the shelves. They have refused after several attempts to talk with them by telephone.</p> <p>I have kept the other bone in order to have a sample. I have also kept all materials related to this incident, hoping that something can be done. (b) (6) suffered horribly and I don't want another animal to go through that.</p> <p>PLEASE INVESTIGATE THIS PRODUCT AND/OR REQUIRE A WARNING LABEL. Thank you so much for your help.</p>		Years	Schnauzer - Miniature	Dog		Pound
EON-146414	10/28/2013 13:51	Cadet Gourmet Duck Breast	Our dog started getting diarrhea so we stopped all treats. His dog food is a premium brand. The diarrhea stopped within a day after stopping the treats. Then we saw the Today's show with information about duck products from China. We have a bag of Cadet Duck Breast we purchased at Costco that says made in China.	2	Years	Shepherd Dog - German	Dog	90	Pound
EON-146407	10/28/2013 13:36	Loving Pet Chicken Breast Jerky Treats	This pet has been fed Loving Pet Chicken Breast Jerky Treats periodically and they are reported to be made in China according to the owner. The treats were purchased in NY. The pet presented today for evaluation of vomiting and diarrhea since yesterday and also anorexia of 3 day duration. On physical exam the pet was dehydrated and quiet, and had loose watery diarrhea upon rectal exam. Abdominal Ultrasound only showed changes consistent with nonspecific gastroenteritis. The pet is currently being hospitalized for supportive care, IV fluids, and gastrointestinal protectants.	6	Years	Bichon Frise	Dog	13	Pound
EON-146404	10/28/2013 13:30	Wiskas Temptations	We changed cat treats to Wiskas Temptations in May 2013. She began to show loss of appetite for her regular dry food immediately. She would only eat the treats. By June 2013, she started to show weight loss. Mid July 2013, this normally healthy 7-8lb cat was 4 lbs. Vet performed blood tests, MRI, gave IV. Nothing showed on test results. She went in for 1 more IV treatment and received antibiotics, and rebounded for about 10 days. She died (b) (6) at about 3.5 lbs.	14	Years	Domestic Mediumhair	Cat	4	Pound

EON-146403	10/28/2013 13:30	Kingdom Pet Wholesome Duck & Sweet Potato	Dog had been eating ~3 treats a day (Monday- Thursday) for a couple of months. After about 1 month the dog's breath began to have a metallic smell. Smell would go away on the weekends when he did not receive the treats. The smell returned a couple days after receiving more treats. I have discontinued giving him the treats all together and his breath no longer has any metallic smell.	8	Years	Mixed (Dog)	Dog	50	Pound
EON-146393	10/28/2013 13:15	Costco Brand chicken Jerky	I purchased chicken jerky from Costco in (b) (6) new years Eve. I had 4 dogs at the time and 3 were given the jerky. The afore mentioned (b) (6) a ShihTzu/Chihuahua mix, was given a piece at approximatly at 2pm. had been in perfect healthy and was a very active dog. Became very lethargic, the clear vomiting and diareaha. Vomit became bloody, so took to Emergency clinic.((b) (6)). She died same day at approximatley 6pm. Vet said complete organ. We believe due to jerky. All symptoms are consistant with re reports. THEN my 7 lb. Chihuahua, father of (b) (6) presented with same symptons, this being (b) (6). We were told he would not survive. With a miracle, he is alive and well after 48 hours of massive treatments also from the Emergency Clinic, with next day treatment and stay at (b) (6) This was reported to Costco all vets believe death and illness due to jerky.	5	Years	Chihuahua	Dog	6	Pound
EON-146392	10/28/2013 13:09	Dingo Brand chicken jerky treats	He was given Dingo brand chicken jerky treats on Christmas Day 2006. He was quickly ill and died just a couple weeks later. I contacted the distributor (as well as the Petsmart where they were purchased). The distributor asked that I return all the product. I felt weird about this so I saved a sample. I still have it, in the freezer. The company was cagey and I did report this at the time to FDA but was told there were a lot of animal actions happening and that there was little the agency could do. I pursued the company and they did finally issue a recall, though I was always suspicious that there were probably lots of other dogs who'd been sick and the recall really didn't last long. When I saw a blurb in The New York Times on 10/24/13 that said FDA is now looking into the thousands of dog deaths since 2007 I thought I should be in touch. I have my correspondence with the company and, as I said, I still have the tainted treats. The portion that I returned to the company tested positive for salmonella. (b) (6) and my other dog were both killed by these treats.	14	Years	Griffon - French Wire-haired Pointing	Dog	60	Pound

EON-146389	10/28/2013 13:06	Pup-peroni Original Beef Recipe	In addition to the dog's normal dog food (4Health Performance Adult), I began using Pup-peroni soft treats as a high value reward for training purposes. I would tear each treat stick into 6 or 7 little bits and give them during training for desired behaviors. I did this several consecutive days, with the dog getting a total of about two treat sticks a day. After several days, he began vomiting once or twice a day. It was a small amount of green/yellow foamy vomit and I took him to the vet after I noticed a spot of blood in the vomit. The vet concluded that the treats were likely irritating his stomach and advised feeding him a chicken and rice mixture for a couple of days. I gradually got him back on his normal food and haven't had any issues since then.	2	Years	Shepherd Dog - German	Dog	80	Pound
EON-146385	10/28/2013 12:54	Waggin Train Wholesome chicken jerky tenders Big Blast pork twist and yam good	Had two digits removed from foot because of tumors being present in March 2011 and while having blood work done it was discovered that her creatine levels were elevated. We had to put her on a special diet for her kidney's. She started to get progressively worst so we took her back in July 2011 and her levels had still increased. We had to leave her there for a weekend while they had her on IV's to flush her system of the toxins. We brought her home. She was ok for a couple of weeks and then started to not really eating. We took her back in August and they did more blood work and her cratine levels had doubled. Our vet informed us that she was in renal failure and wanted to do the IV's and flush her again and we said that we just couldn't put her through that experience again. I asked him if he thought the treats we had been feeding her could have caused all of this, because they had been taken off the market. We were giving her Wagon Train yam good and their chicken jerky. It said it was possibly, but that none of the testing was conclusive. We told him we were taking her home and doing the best we could to keep her comfortable until we had to put her down. We finally had to have her euthanized on (b) (6). We have had other pets and had to put them down, but this one was the most tramatic, because we feel that we controbuted to her early death by giving her tainted treats. It's been 2 years and we still cry. I now have 2 Labs and have purchased a dehydrator and make my own chicken jerky and yams. We purchase very few treats and always make sure they are manufactured in the USA. If there is anything at all we can do to help in the investigation, we would love too. These deaths with treats manufactured in China must stop.	8	Years	Retriever - Labrador	Dog	119	Pound

EON-146383	10/28/2013 12:45	Waggin Train wholesome chicken Jerky Tenders	I fed (b) (6) one or two Waggin Train chicken strips per day as treats during 2010-2012--I purchased the chicken at Sam's Club. In noticed she was throwing up on occasion and seemed more lethargic than she had been. I read about the potential problems with that brand of Chicken Jerky so I stopped giving the treats to her--I have the last bag I bought stilled sealed. A few weeks later she got a bad urinary infection that the vet treated with antibiotics. A few weeks later, the infection was back so she got another round of antibiotics. In February of 2013 another infection was present so I took a urine sample to the vet--blood was present with some bacteria. We gave her another dose of antibiotics that seemed to clear the problem up. This week, she has developed another infection and is currently on antibiotics. The vet is stumped as to why she is having this problem so often. We have made a point of not leaving her in the house for long periods. She has felt better since I stopped the chicken treats--no throwing up and better energy--however, she is not gotten back to the energy she had before I fed her the Waggin Train chicken jerky.	7	Years	Brittany	Dog	55	Pound

EON-146352	10/28/2013 11:09	Cadet Gourmet Duck Breast, Kingdom Pets Duck & Sweet Potato , Pet Shoppe / Walgreens Co. Chicken Jerky, Pet Shoppe Chicken Wrapped Biscuits	<p>I have been giving (b) (6) chicken jerky, beef jerky, duck, for the last 3-4 years. I started to notice they were becoming harder to get and asked store associates when they would be getting them in, no one ever told me that they were pulled off the shelf. My Vet never told me about the recall. (b) (6) is registered in the state of (b) (6) why are we not notified? Where ever I could find them I would pick up quite a few packages because he loved them. In August of 2013 I purchased the Cadet brand of duck jerkey from Costco and Sweet Potato & Duck as well. He ate those until 10/22/13. Towards the end of September 2013 I purchased 9- 20-oz bags of chicken jerky from Walgreens and 1 package of Chicken wrapped biscuits, because I hadn't seen them for such a long time. I never knew about anything and was surprised, that my Vet did not link the two when I took him in due to his being so sick. when I saw the alert on MSNBC online. I printed the articles and immediately went to see his Vet. because he got very ill, the onset was 9/26/13. So he started this new Pet Shoppe brand packaged and distributed by Walgreen Co. around the 20th of September 2013. As I said, he started to show signs of weakness, loss of appetite, vomiting, and diarrhea on 9/26/13. By the 29th he was really sick and his diarrhea was all blood. So I took him in immediately. They decided to run tests and x-rays., his liver and kidney levels were high and he was dehydrated. They decided to hospitalize him to give him fluids and meds. When I went to see him on Oct. 1, 2013 they said they did not know what could be wrong expect maybe GI Disease or enteritis? I decided since my job was on shutdown effective that day, I would take him home to nurse him. He did not eat for 5 days, but was not losing weight. I started boiling chicken and mixing it with rice, he has been on that and I would give him a couple treats a day until I read about this on Oct. 22, 2013. So it was a good month of the new chicken jerky and chicken wrapped biscuits. The other two of the duck and sweet potato & duck he was getting since August 2013. We almost lost him..I know it was due to these treats. All but one says they were made in China. Only the Cadet brand duck breast does not state where it was made.</p> <p>I would like to be part of the class action law suit to at least recover from my vet bills and pain and suffering of both my pet and myself.</p>	6	Years	Mixed (Dog)	Dog	43	Pound

EON-146340	10/28/2013 10:39	Hillside Farms Chicken Jerky Lean chicken Breast natural ingredients	Started giving her Hillside Farms Chicken Jerky as a reward- not every day. (b) (6) developed extreme diarrhea and was taken to our vet. Started making her own food (chicken, rice, veggies) and she would have solid poop some days and diarrhea on others for the past two months, including another trip to vet. Eyes became sunken.After reading FDA warning last week, stopped the chicken treats and her health immediately improved- only solid and regular poop and eyes returned to normal. I still have some of the treats from hillside Farms if you need them for testing.	14	Years	Basset - Griffon Vendeen Large	Dog	50	Pound
EON-146338	10/28/2013 10:39	Cadet Gourmet Duck Jerky Treats	<p>I purchased the Cadet Duck Jerky from Costco on Friday 10/18/2013 and her my dog about 1/2 of a treat the size of a bacon strip over the course of the evening. By about 10:00, she was very lethargic and drinking a lot of water. By Saturday morning she had begun vomiting a greenish brown foam and was showing no interest in food, but still drinking a lot of water. The lethargy and vomiting continued all day long. By Saturday evening, she had begun having diarrhea and still showed no interest in food or play. This is very unusual behavior for (b) (6) she is usually a ball of energy and wears both me and my husband out playing. I spoke with my sister, who is a professional in the animal industry (master groomer, rehabilitator, trainer) and she said that while "puppy belly" can be common, the rest of the behavior; lethargy, drinking copious amounts of water, was concerning. She recommended giving her Pedialite and came over on Sunday to look at her. The vomiting and diarrhea continued and she slept almost constantly. By Sunday morning she was not bringing anything up when she vomited, it was mostly dry heaves and the diarrhea had stopped, although she was still straining to have a bowel movement every time I took her out, kind of like she had belly cramping. My sister came over, took one look at the treats and said "oh, made in China, not good" She said that China doesn't have the same standards used in the US and that even though the treats had "limited ingredients" there was no way of knowing how the duck was dried and that it could have come from a processing plant that manufactures almost anything. She said that if (b) (6) wasn't showing significant improvement by Monday, I should take her to the vet. Fortunately, (b) (6) began showing interest in food and play again by Sunday afternoon, and has made a complete recovery. I returned the treats to Costco on Monday. On Tuesday morning I started seeing talk on CNN about chicken and duck jerky treats made in China. I called the distributor who was very nice about it, but obviously there isn't anything they can do. By Thursday afternoon, it was all over all of the news outlets;</p>	6	Months	Alaskan Klee Kai	Dog	11	Pound
