

# Understanding Informed Consent for Investigational Products

### Jose Pablo Morales, MD

Suzanne Pattee, JD

Senior Medical Advisor

**Regulatory Counsel** 

Office of Clinical Policy Office of the Commissioner Food and Drug Administration

### Disclaimer

The views and opinions presented here represent those of the speaker and should not be considered to represent advice or guidance on behalf of the U.S. Food and Drug Administration

## **Objectives**

- Describe the regulatory requirements for informed consent
- Outline the <u>key information</u> to help subjects to understand consent
- Provide an example of obtaining informed consent for a clinical study: dialogue between a patient with a rare disease and a physician

### **Key Words**

You will hear us use these words. Here's what they mean:

- 1. Sponsor
- 2. Investigator
- 3. Sponsor-investigator
- 4. Clinical trial or study
- 5. Human subject/research participant
- 6. Institutional Review Board (IRB)

# **Elements of Informed Consent**

### a) Basic Elements

- 1. A statement that the study involves <u>research</u>
  - Explanation of the purpose / expected duration
  - Description of procedures/research interventions
- 2. Reasonably foreseeable risks or discomforts
- 3. Reasonably <u>expected benefits</u> to the subject or to others
- 4. Disclosure of appropriate <u>alternatives</u>
- 5. <u>Confidentiality</u>/FDA may inspect
- 6. <u>Compensation</u> and research-related <u>injuries</u>
- 7. Point of <u>contact for questions</u>
- 8. Participation is voluntary

## **Elements of Informed Consent**

### **b)** Additional Elements (When Appropriate)

- 1. A statement that the particular treatment or procedure may involve unforeseeable risk to the subject (or embryo or fetus)
- 2. Circumstances of study termination
- 3. Costs to the subject
- 4. Consequences of withdrawal
- 5. A statement that significant new findings relating to the subject's willingness to continue will be communicated
- 6. Approximate number of subjects in the study

### c) Mandatory verbatim statement related to posting on ClinicalTrials.gov

### **Informed Consent Guidance**

#### **Informed Consent**

Guidance for IRBs, Clinical Investigators, and Sponsors

FDA

### Improving Informed Consent with Key Information\*

Informed consent must begin with:

- A concise and focused presentation of the <u>key information</u> that is most likely to assist a prospective subject or legally authorized representative
- In understanding the reasons why one might or might not want to participate in the research
- This part of the informed consent must be organized and presented in a way that facilitates comprehension

\*The revised Common Rule requires key information for federally funded research (see 45 CFR 46.116(a)(5)(i)). FDA's proposed rule would require the identical provision for FDA-regulated trials (see 21 CFR 50.20(e)(1); see <u>87 FR 58733</u>).

#### www.fda.gov

### **Key Information Example**

#### **Key Information**

This key information can help you learn more about this clinical trial and decide whether to take part in the trial.

#### Voluntary Participation and Right to Discontinue Participation

Your participation is voluntary and based on what is important to you.

You may leave at any time without penalty.

#### **Purpose of the Research**

This research is being conducted to find out if the product being studied is safe and effective in treating people like you with your health condition.

## **Key Information Example**

If you take the study product, you have a chance of side effects, such as fever or nausea.

We do not know if this product will help you.

There is a chance that it could worsen your condition.

#### **Reasonably Expected Benefits**

Researchers are studying this product to learn more about whether it will improve your condition.

If you are randomly assigned to take the product, it may improve your condition.

If you are randomly assigned to take the inactive pill (also called a placebo), you will not receive the product and will not benefit directly.

## **Key Information Example**

### FDA

#### Expected Duration and Procedures to Be Followed

To learn if the product is helpful, it is important that some people take a placebo (inactive pill). A computer will assign you randomly to take the product or the placebo.

The trial will take 6 months and each visit will take 2 hours. You will have blood drawn at each visit.

#### Compensation and Medical Treatments for Research-Related Injuries

If you are injured by participating in this research, the medical treatment of your injury will be paid for.

#### **Appropriate Alternative Procedures**

Before joining the trial, you should talk to your doctor about other approved options for your condition and whether this trial is a good choice for you.
